29 April 2022

Dear Madam,

Re: The Statutory Independent Public Inquiry into Urology Services in the  
Southern Health and Social Care Trust

**Provision of a Section 21 Notice requiring the provision of evidence in the  
form of a written statement**

I am writing to you in my capacity as Solicitor to the Independent Public Inquiry into Urology Services in the Southern Health and Social Care Trust (the Urology Services Inquiry) which has been set up under the Inquiries Act 2005 ('the Act').

I enclose a copy of the Urology Services Inquiry's Terms of Reference for your information.

You will be aware that the Inquiry has commenced its investigations into the matters set out in its Terms of Reference. The Inquiry is continuing with the process of gathering all of the relevant documentation from relevant departments, organisations and individuals. In addition, the Inquiry has also now begun the process of requiring individuals who have been, or may have been, involved in the range of matters which come within the Inquiry's Terms of Reference to provide written evidence to the Inquiry panel.

The Urology Services Inquiry is now issuing to you a Statutory Notice (known as a Section 21 Notice) pursuant to its powers to compel the provision of evidence in the form of a written statement in relation to the matters falling within its Terms of Reference.

The Inquiry is aware that you have held posts relevant to the Inquiry's Terms of Reference. The Inquiry understands that you will have access to all of the relevant information required to provide the witness statement required now or at any stage

throughout the duration of this Inquiry. Should you consider that not to be the case, please advise us of that as soon as possible.

The Schedule to the enclosed Section 21 Notice provides full details as to the matters which should be covered in the written evidence which is required from you. As the text of the Section 21 Notice explains, you are required by law to comply with it.

Please bear in mind the fact that the witness statement required by the enclosed Notice is likely (in common with many other statements we will request) to be published by the Inquiry in due course. It should therefore ideally be written in a manner which is as accessible as possible in terms of public understanding.

You will note that certain questions raise issues regarding documentation. As you are aware the Trust has already responded to our earlier Section 21 Notice requesting documentation from the Trust as an organisation. However if you in your personal capacity hold any additional documentation which you consider is of relevance to our work and is not within the custody or power of the Trust and has not been provided to us to date, then we would ask that this is also provided with this response.

If it would assist you, I am happy to meet with you and/or the Trust's legal representative(s) to discuss what documents you have and whether they are covered by the Section 21 Notice.

You will also find attached to the Section 21 Notice a Guidance Note explaining the nature of a Section 21 Notice and the procedures that the Inquiry has adopted in relation to such a notice. In particular, you are asked to provide your evidence in the form of the template witness statement which is also enclosed with this correspondence. In addition, as referred to above, you will also find enclosed a copy of the Inquiry's Terms of Reference to assist you in understanding the scope of the Inquiry's work and therefore the ambit of the Section 21 Notice.

Given the tight time-frame within which the Inquiry must operate, the Chair of the Inquiry would be grateful if you would comply with the requirements of the Section 21 Notice as soon as possible and, in any event, by the date set out for compliance in the Notice itself.

If there is any difficulty in complying with this time limit you must make application to the Chair for an extension of time before the expiry of the time limit, and that application must provide full reasons in explanation of any difficulty.

Finally, I would be grateful if you could acknowledge receipt of this correspondence and the enclosed Notice by email to Personal Information redacted by the USI.

Please do not hesitate to contact me to discuss any matter arising.

Yours faithfully

Personal Information redacted by the USI

**Anne Donnelly**  
Solicitor to the Urology Services Inquiry

THE INDEPENDENT PUBLIC INQUIRY INTO  
UROLOGY SERVICES IN THE  
SOUTHERN HEALTH AND SOCIAL CARE TRUST

Chair's Notice

[No 19 of 2022]

pursuant to Section 21(2) of the Inquiries Act 2005

WARNING

If, without reasonable excuse, you fail to comply with the requirements of this Notice you will be committing an offence under section 35 of the Inquiries Act 2005 and may be liable on conviction to a term of imprisonment and/or a fine.

Further, if you fail to comply with the requirements of this Notice, the Chair may certify the matter to the High Court of Justice in Northern Ireland under section 36 of the Inquiries Act 2005, where you may be held in contempt of court and may be imprisoned, fined or have your assets seized.

TO:

**Mary Burke**

**Assistant Director of Acute Services; Medicine and Unscheduled care**

**Southern Health and Social Care Trust**

**Headquarters**

**68 Lurgan Road**

**Portadown**

**BT63 5QQ**

## IMPORTANT INFORMATION FOR THE RECIPIENT

1. This Notice is issued by the Chair of the Independent Public Inquiry into Urology Services in the Southern Health and Social Care Trust on foot of the powers given to her by the Inquiries Act 2005.
2. The Notice requires you to do the acts set out in the body of the Notice.
3. You should read this Notice carefully and consult a solicitor as soon as possible about it.
4. You are entitled to ask the Chair to revoke or vary the Notice in accordance with the terms of section 21(4) of the Inquiries Act 2005.
5. If you disobey the requirements of the Notice it may have very serious consequences for you, including you being fined or imprisoned. For that reason you should treat this Notice with the utmost seriousness.

## WITNESS STATEMENT TO BE PRODUCED

**TAKE NOTICE** that the Chair of the Independent Public Inquiry into Urology Services in the Southern Health and Social Care Trust requires you, pursuant to her powers under section 21(2)(a) of the Inquiries Act 2005 ('the Act'), to produce to the Inquiry a Witness Statement as set out in the Schedule to this Notice by **noon on 10<sup>th</sup> June 2022**.

## APPLICATION TO VARY OR REVOKE THE NOTICE

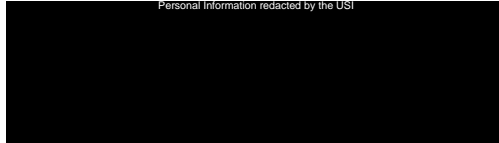

**AND FURTHER TAKE NOTICE** that you are entitled to make a claim to the Chair of the Inquiry, under section 21(4) of the Act, on the grounds that you are unable to comply with the Notice, or that it is not reasonable in all the circumstances to require you to comply with the Notice.

If you wish to make such a claim you should do so in writing to the Chair of the Inquiry at: **Urology Services Inquiry, 1 Bradford Court, Belfast, BT8 6RB** setting out in detail the basis of, and reasons for, your claim by **noon on 3<sup>rd</sup> June 2022**.

Upon receipt of such a claim the Chair will then determine whether the Notice should be revoked or varied, including having regard to her obligations under section 21(5) of the Act, and you will be notified of her determination.

Dated this day 29<sup>th</sup> April 2022

Signed:

Personal Information redacted by the USI  

Christine Smith QC

Chair of Urology Services Inquiry

**SCHEDULE**  
**[No 19 of 2022]**

**General**

1. Having regard to the Terms of Reference of the Inquiry, please provide a narrative account of your involvement in or knowledge of all matters falling within the scope of those Terms. This should include an explanation of your role, responsibilities and duties, and should provide a detailed description of any issues raised with you, meetings attended by you, and actions or decisions taken by you and others to address any concerns. It would greatly assist the inquiry if you would provide this narrative in numbered paragraphs and in chronological order.
2. Please also provide any and all documents within your custody or under your control relating to the terms of reference of the *Urology Services Inquiry* ("USI"), except where those documents have been previously provided to the USI by the SHSCT. Please also provide or refer to any documentation you consider relevant to any of your answers, whether in answer to Question 1 or to the questions set out below.
3. Unless you have specifically addressed the issues in your reply to Question 1 above, please answer the remaining questions in this Notice. If you rely on your answer to Question 1 in answering any of these questions, please specify precisely which paragraphs of your narrative you rely on. Alternatively, you may incorporate the answers to the remaining questions into your narrative and simply refer us to the relevant paragraphs. The key is to address all questions posed. If there are questions that you do not know the answer to, or where someone else is better placed to answer, please explain and provide the name and role of that other person. If you are in any doubt about the documents previously provided by the SHSCT you may wish to discuss this with the Trust's legal advisors, or, if you prefer, you may contact the Inquiry.

**Your position(s) within the SHSCT**

4. Please summarise your qualifications and your occupational history prior to commencing employment with the SHSCT.
5. Please set out all posts you have held since commencing employment with the Trust. You should include the dates of each tenure, and your duties and responsibilities in each post. Please provide a copy of all relevant job descriptions and comment on whether the job description is an accurate reflection of your duties and responsibilities in each post.
6. Please provide a description of your line management in each role, naming those roles/individuals to whom you directly report/ed and those departments, services, systems, roles and individuals whom you manage/d or had responsibility for.
7. With specific reference to *the operation and governance of urology services*, please set out your roles and responsibility and lines of management.
8. It would be helpful for the Inquiry for you to explain how those aspects of your role and responsibilities which were *relevant to the operation and governance of urology services*, differed from and/or overlapped with, for example, the roles of the Medical Director, Clinical Director, Associate Medical Director and Head of Urology Service or with any other role which had governance responsibility.

**Urology services/Urology unit - staffing**

9. The Inquiry understands that a regional review of urology service was undertaken in response to service concerns regarding the ability to manage growing demand, meet cancer and elective waiting times, maintain quality standards and provide high quality elective and emergency services. This review was completed in March 2009 and recommended three urology centres, with one based at the Southern Trust - to treat those from the Southern catchment area and the lower third of the western area. As relevant, set out

your involvement, if any, in the establishment of the urology unit in the Southern Trust area.

10. What, if any, performance indicators were used within the urology unit at its inception?
11. Was the '*Integrated Elective Access Protocol*' published by DOH in April 2008, provided to or disseminated in any way by you or anyone else to urology consultants in the SHSCT? If yes, how and by whom was this done? If not, why not?
12. How, if at all, did the '*Integrated Elective Access Protocol*' (and time limits within it) impact on the management, oversight and governance of urology services? How, if at all, were the time limits for urology services monitored as against the requirements of the protocol? What action, if any, was taken (and by whom) if time limits were not met?
13. The implementation plan, *Regional Review of Urology Services, Team South Implementation Plan*, published on 14 June 2010, notes that there was a substantial backlog of patients awaiting review at consultant led clinics at that stage and included the Trust's plan to deal with this backlog.
  - I. What is your knowledge of and what was your involvement with this plan?
  - II. How was it implemented, reviewed and its effectiveness assessed?
  - III. What was your role in that process?
  - IV. Did the plan achieve its aims in your view? OR Please advise whether or not it is your view that the plan achieved its aims? If so, please expand stating in what way you consider these aims were achieved.
14. Were the issues raised by the *Implementation Plan* reflected in any Trust governance documents or minutes of meetings, and/or the Risk Register? Whose role was to ensure this happened? If the issues were not so reflected, can you explain why? Please provide any documents referred to in your answer.

15. To your knowledge, were the issues noted in the *Regional Review of Urology Services, Team South Implementation Plan* resolved satisfactorily or did problems persist following the setting up of the urology unit?
16. Do you think the unit was adequately staffed and properly resourced from its inception? If that is not your view, can you please expand noting the deficiencies as you saw them?
17. Were you aware of any staffing problems within the unit since its inception? If so, please set out the times when you were made aware of such problems, how and by whom.
18. Were there periods of time when any posts within the unit remained vacant for a period of time? If yes, please identify the post(s) and provide your opinion of how this impacted on the unit. How were staffing challenges and vacancies within the unit managed and remedied?
19. In your view, what was the impact of any staffing problems on, for example, the provision, management and governance of urology services?
20. Did staffing posts, roles, duties and responsibilities change in the unit during your tenure? If so, how and why?
21. Has your role changed in terms of governance during your tenure? If so, explain how it has changed with particular reference to urology services, as relevant?
22. Explain your understanding as to how the urology unit and urology services were supported by non-medical staff. In particular the Inquiry is concerned to understand the degree of administrative support and staff allocation provided to the medical and nursing staff. If you not have sufficient understanding to address this question, please identify those individuals you say would know.
23. Do you know if there was an expectation that administration staff would work collectively within the unit or were particular administration staff allocated to particular consultants? How was the administrative workload monitored?

24. Were the concerns of administrative support staff, if any, ever raised with you? If so, set out when those concerns were raised, what those concerns were, who raised them with you and what, if anything, you did in response.
25. Who was in overall charge of the day to day running of the urology unit? To whom did that person answer, if not you? Give the names and job titles for each of the persons in charge of the overall day to day running of the unit and to whom that person answered throughout your tenure.
26. What, if any role did you have in staff performance reviews?
27. Was your role subject to a performance review or appraisal? If so, please explain how and by whom and provide any relevant documentation including details of your agreed objectives for this role, and any guidance or framework documents relevant to the conduct of performance review or appraisal.

**Engagement with unit staff**

28. Describe how you engaged with all staff within the unit. It would be helpful if you could indicate the level of your involvement, as well as the kinds of issues which you were involved with or responsible for within urology services, on a day to day, week to week and month to month basis. You might explain the level of your involvement in percentage terms, over periods of time, if that assists.
29. Please set out the details of any weekly, monthly or daily scheduled meetings with any urology unit/services staff and how long those meetings typically lasted. Please provide any minutes of such meetings.
30. During your tenure did medical and professional managers in urology work well together? Whether your answer is yes or no, please explain by way of examples regarding urology.

**Governance – generally**

31. What was your role regarding the consultants and other clinicians in the unit, including in matters of clinical governance?
32. Who oversaw the clinical governance arrangements of the unit and how was this done? As relevant to your role, how did you assure yourself that this was being done appropriately?
33. How did you oversee the quality of services in urology? If not you, who was responsible for this and how did they provide you with assurances regarding the quality of services?
34. How, if at all, did you oversee the performance metrics in urology? If not you, who was responsible for this overseeing performance metrics?
35. How did you assure yourself regarding patient risk and safety in urology services in general? What systems were in place to assure you that appropriate standards were being met and maintained?
36. How could issues of concern relating to urology services be brought to your attention? The Inquiry is interested in both internal concerns, as well as concerns emanating from outside the unit, such as from patients. What systems or processes were in place for dealing with concerns raised? What is your view of the efficacy of those systems?
37. Did those systems or processes change over time? If so, how, by whom and why?
38. How did you ensure that you were appraised of any concerns generally within the unit?
39. How did you ensure that governance systems, including clinical governance, within the unit were adequate? Did you have any concerns that governance issues were not being identified, addressed and escalated as necessary?

40. How, if at all, were any concerns raised or identified by you or others reflected in Trust governance documents, such as Governance meeting minutes or notes, or in the Risk Register? Please provide any documents referred to.
41. What systems were in place for collecting patient data in the unit? How did those systems help identify concerns, if at all?
42. What is your view of the efficacy of those systems? Did those systems change over time and, if so, what were the changes?
43. During your tenure, how well do you think performance objectives were set for consultant medical staff and for specialty teams? Please explain your answer by reference to any performance objectives relevant to urology during your time, providing documentation or sign-posting the Inquiry to any relevant documentation.
44. How well did you think the cycle of job planning and appraisal worked and explain why you hold that view?
45. The Inquiry is keen to learn the process, procedures and personnel who were involved when governance concerns having the potential to impact on patient care and safety arose. Please provide an explanation of that process during your tenure, including the name(s) and role of those involved, how things were escalated and how concerns were recorded, dealt with and monitored. Please identify the documentation the Inquiry might refer to in order to see examples of concerns being dealt with in this way during your tenure.
46. Did you feel supported in your role by the medical line management hierarchy? Whether your answer is yes or no, please explain by way of examples, in particular regarding urology.

### Concerns regarding the urology unit

47. The Inquiry is keen to understand how, if at all, you, as Assistant Director, liaised with, involved and had meetings with the following staff (please name the individual/s who held each role during your tenure):

- (i) The Chief Executive(s);
- (ii) the Medical Director(s);
- (iii) the Director(s) of Acute Services;
- (iv) the other Assistant Director (s);
- (v) the Associate Medical Directors;
- (vi) the Clinical Director(s);
- (vii) the Head of Service;
- (viii) the consultant urologists.

When answering this question, the Inquiry is interested to understand how you liaised with these individuals in matters of concern regarding urology governance generally, and in particular those governance concerns with the potential to impact on patient care and safety. In providing your answer, please set out in detail the precise nature of how your roles interacted on matters (i) of governance generally, and (ii) specifically with reference to the concerns raised regarding urology services. Where not previously provided, you should include all relevant documentation, dates of meetings, actions taken, etc.

48. Following the inception of the urology unit, please describe the main problems you encountered or were brought to your attention in respect of urology services? Without prejudice to the generality of this request, please address the following specific matters: -

- (a) What were the concerns raised with you, who raised them and what, if any, actions did you or others (please name) take or direct to be taken as a result of those concerns? Please provide details of all meetings, including dates, notes, records etc., and attendees, and

detail what was discussed and what was planned as a result of these concerns.

- (b) What steps were taken (if any) to risk assess the potential impact of the concerns once known?
- (c) Did you consider that any concerns which were raised may have impacted on patient care and safety? If so, what steps, if any, did you take to mitigate against this? If not, why not.
- (d) If applicable, explain any systems and agreements put in place to address these concerns. Who was involved in monitoring and implementing these systems and agreements?
- (e) How did you assure yourself that any systems and agreements that may have been put in place to address concerns were working as anticipated?
- (f) If you were given assurances by others, how did you test those assurances?
- (g) Were the systems and agreements put in place to rectify the problems within urology services successful?
- (h) If yes, by what performance indicators/data/metrics did you measure that success? If not, please explain.

49. Having regard to the issues of concern within urology services which were raised with you or which you were aware of, including deficiencies in practice, explain (giving reasons for your answer) whether you consider that these issues of concern were -

- (a) properly identified,
- (b) their extent and impact assessed,
- (c) and the potential risk to patients properly considered?

50. What, if any, support was provided to urology staff (other than Mr O'Brien) by you and the Trust, given any of the concerns identified? Did you engage with other Trust staff to discuss support options, such as, for example, Human Resources? If yes, please explain in full. If not, please explain why not. (Q64 will ask about any support provided to Mr O'Brien).
51. Was the urology department offered any support for quality improvement initiatives during your tenure?

### **Mr. O'Brien**

52. Please set out your role and responsibilities in relation to Mr. O'Brien. How often would you have had contact with him on a daily, weekly, monthly basis over the years (your answer may be expressed in percentage terms over periods of time if that assists)?
53. What was your role and involvement, if any, in the formulation and agreement of Mr. O'Brien's job plan(s)? If you engaged with him and his job plan(s) please set out those details in full.
54. When and in what context did you first become aware of issues of concern regarding Mr. O'Brien? What were those issues of concern and when and by whom were they first raised with you? Please provide any relevant documents. Do you now know how long these issues were in existence before coming to your or anyone else's attention? Please provide full details in your answer.
55. Please detail all discussions (including meetings) in which you were involved which considered concerns about Mr. O'Brien, whether with Mr. O'Brien or with others (please name). You should set out in detail the content and nature of those discussions, when those discussions were held, and who else was involved in those discussions at any stage.
56. What actions did you or others take or direct to be taken as a result of these concerns? If actions were taken, please provide the rationale for them. You

should include details of any discussions with named others regarding concerns and proposed actions. Please provide dates and details of any discussions, including details of any action plans, meeting notes, records, minutes, emails, documents, etc., as appropriate.

57. Did you consider that any concerns raised regarding Mr O'Brien may have impacted on patient care and safety? If so:

- (i) what risk assessment did you undertake, and
- (ii) what steps did you take to mitigate against this? If none, please explain. If you consider someone else was responsible for carrying out a risk assessment or taking further steps, please explain why and identify that person.

58. If applicable, please detail your knowledge of any agreed way forward which was reached between you and Mr. O'Brien, or between you and others in relation to Mr. O'Brien, or between Mr O'Brien and others, given the concerns identified.

59. What, if any, metrics were used in monitoring and assessing the effectiveness of the agreed way forward or any measures introduced to address the concerns? How did these measures differ from what existed before?

60. How did you assure yourself that any systems and agreements put in place to address concerns (if this was done) were sufficiently robust and comprehensive and were working as anticipated? What methods of review were used? Against what standards were methods assessed?

61. Did any such agreements and systems which were put in place operate to remedy the concerns? If yes, please explain. If not, why do you think that was the case? What in your view could have been done differently?

62. Did Mr O'Brien raise any concerns regarding, for example, patient care and safety, risk, clinical governance or administrative issues or any matter which

might impact on those issues? If yes, what concerns did he raise and with whom, and when and in what context did he raise them? How, if at all, were those concerns considered and what, if anything, was done about them and by whom? If nothing was done, who was the person responsible for doing something?

63. Did you raise any concerns about the conduct/performance of Mr O'Brien. If yes:

- (a) outline the nature of concerns you raised, and why it was raised
- (b) who did you raise it with and when?
- (c) what action was taken by you and others, if any, after the issue was raised
- (d) what was the outcome of raising the issue?

If you did not raise any concerns about the conduct/performance of Mr O'Brien, why did you not?

64. What support was provided by you and the Trust specifically to Mr. O'Brien given the concerns identified by him and others? Did you engage with other Trust staff to discuss support option, such as, for example, Human Resources? If yes, please explain in full. If not, please explain why not.

65. How, if at all, were the concerns raised by Mr. O'Brien and others reflected in Trust governance documents, such as the Risk Register? Please provide any documents referred to. If the concerns raised were not reflected in governance documents and raised in meetings relevant to governance, please explain why not.

## **Learning**

66. Are you now aware of governance concerns arising out of the provision of urology services, which you were not aware of during your tenure? Identify any governance concerns which fall into this category and state whether you could and should have been made aware and why.

67. Having had the opportunity to reflect, do you have an explanation as to what went wrong within urology services and why?

68. What do you consider the learning to have been from a governance perspective regarding the issues of concern within urology services and the unit, and regarding the concerns involving Mr. O'Brien in particular?
69. Do you think there was a failure to engage fully with the problems within urology services? If so, please identify who you consider may have failed to engage, what they failed to do, and what they may have done differently. If your answer is no, please explain in your view how the problems which arose were properly addressed and by whom.
70. Do you consider that, overall, mistakes were made by you or others in handling the concerns identified? If yes, please explain what could have been done differently within the existing governance arrangements during your tenure? Do you consider that those arrangements were properly utilised to maximum effect? If yes, please explain how and by whom. If not, what could have been done differently/better within the arrangements which existed during your tenure?
71. Do you think, overall, the governance arrangements were fit for purpose? Did you have concerns about the governance arrangements and did you raise those concerns with anyone? If yes, what were those concerns and with whom did you raise them and what, if anything, was done?
72. Given the Inquiry's terms of reference, is there anything else you would like to add to assist the Inquiry in ensuring it has all the information relevant to those Terms?

**NOTE:**

By virtue of section 43(1) of the Inquiries Act 2005, "document" in this context has a very wide interpretation and includes information recorded in any form. This will include, for instance, correspondence, handwritten or typed notes, diary entries and minutes and memoranda. It will also include electronic documents such as emails, text communications and recordings. In turn, this will also include relevant email and text communications sent to or from personal email accounts or telephone numbers, as well as those sent from official or business accounts or numbers. By virtue of section 21(6) of the Inquiries Act 2005, a thing is under a person's control if it is in his possession or if he has a right to possession of it.

## UROLOGY SERVICES INQUIRY

**USI Ref:** Notice 19 of 2022

**Date of Notice:** 29<sup>th</sup> April 2022

---

**Witness Statement of: Mary Burke**

---

I, Mary Burke, Interim Assistance Director for Unscheduled Care, will say as follows:-

### General

**Q1. Having regard to the Terms of Reference of the Inquiry, please provide a narrative account of your involvement in or knowledge of all matters falling within the scope of those Terms. This should include an explanation of your role, responsibilities and duties, and should provide a detailed description of any issues raised with you, meetings attended by you, and actions or decisions taken by you and others to address any concerns. It would greatly assist the inquiry if you would provide this narrative in numbered paragraphs and in chronological order.**

1. Having reviewed the terms of reference, and having considered my interim role as AD of Medicine and Unscheduled Care from 26<sup>th</sup> April 2012 -31<sup>st</sup> January 2013 when I covered for Mr Barry Conway, who was seconded out of this role and having considered my interim role of Medicine and Unscheduled Care 18<sup>th</sup> March 2020- 31<sup>st</sup> August 2020 when I covered for Mrs Anne McVey who was seconded out of this role, I can confirm that I was not involved in any meetings in relation to Urology services or Mr. Aidan O'Brien. I can confirm I had no knowledge or any concerns in relation to the Urology Service or Mr. O'Brien.
2. However, in my current role as interim AD for Unscheduled Care (1<sup>st</sup> September 2020 to present day), I can confirm that I attended the monthly Clinical Governance meetings which were chaired by the Director of Acute Services, Mrs Melanie McClements. I can confirm that at the meeting on 9<sup>th</sup> April 2021 which I attended, Mrs McClements advised under Chair's business that there were two matters arising, of which one was in relation to the Urology SAIs. Dr Maria O'Kane shared the learning from the 9 urology SAI's. The 9 SAIs were not shared at this meeting. This was the first time that I had knowledge of the concerns in relation to the Urology Service. See 1. 202109041.1ClinicalGovernanceMinutes

## Urology Services Inquiry

and 2.-35. 202109041.2ClinicalGovernanceAgenda located in S21 19 of 2022 Attachments

3. At a further Clinical Governance meeting on the 14<sup>th</sup> May 2021, which I attended, there was a paper shared in relation to the lessons learned and the recommendations in response to the findings from the nine patients, where a doctor did not adhere to agreed recommendations, varied from best practice guidance, and did not involve other specialists appropriately in care. This paper did not have an author and there was no further detail given on the SAls. The Admin Review Process V13, was shared at the meeting. Mr Ronan Carroll (Assistant Director for Acute Services, Anaesthetics and Surgery) provided a summary of the review process and actions required to address ongoing risks/flaws which were to be implemented.

4. My involvement included a further ten emails, which were emailed in June 2020, August 2021, October 2021, December 2021 and January 2022–

- a) 1 was a global email retirement announcement for Mr Aidan O'Brian on 08/06/2020  
*See located in S21 19 of 2022 Attachments, 83. 202008061.8Retirement of Mr Aidan O'Brien, Consultant Urologist*
- b) 4 emails were from three of the Assistant Directors regarding evidence which was being gathered regarding the inquiry received on the 14<sup>th</sup> October 2021. (Mr Barry Conway, Mr Ronan Carroll and Ms Anita Carroll)

*Opportunity - Programme Director for Public Inquiry and Trust Liaison – Urology Services Inquiry*

### Roles Responsibilities -

#### **Interim AD for Medicine and Unscheduled Care (24/04/2012-31/01/2013)**

5. As the AD for Medicine and Unscheduled Care I was responsible for the operational/governance and financial management of all specialties in the Medical division. This incorporated the following specialties across all three sites (Craigavon Area Hospital, Daisy Hill Hospital, South Tyrone Hospital) - older people's medicine, endocrinology, rheumatology, neurology, gastroenterology, dermatology, cardiology, the emergency department, renal services, rehabilitation, discharge team, hospital social services, Minor Injuries, the emergency dental clinic and bed management. I collaborated closely with senior clinicians and other disciplines to implement the objectives of the Trust's Delivery Plan and ensure effective multidisciplinary working. I provided clear leadership to all staff in the division, as well as being responsible for effective financial management and the efficient use of all resources. I supported the Director of Acute Services with long term planning and service reform initiatives. My role did not include the Urology Service.

#### **Interim AD for Medicine and Unscheduled Care (18/03/2020-31/08/2020)**

6. As the AD for Medicine and Unscheduled Care I was responsible for the operational/governance and financial management of all specialties in the Medical division. This incorporated the following specialties across all three sites (Craigavon Area Hospital, Daisy Hill Hospital, South Tyrone Hospital) - older people's medicine, endocrinology, rheumatology, neurology, gastroenterology, dermatology, cardiology, the emergency department, renal services, rehabilitation, discharge team, hospital social services, Minor Injuries, the emergency dental clinic and bed management. I collaborated closely with senior clinicians and other disciplines to implement the objectives of the Trust's Delivery Plan and ensure effective multidisciplinary working. I provided clear leadership to all staff in the division, as well as being responsible for effective financial management and the efficient use of all resources. I supported the Director of Acute Services with long term planning and service reform initiatives. My role did not include the Urology Service.

#### **Interim AD for Unscheduled Care (01/09/2020- Present)**

7. As the AD for Medicine and Unscheduled Care I was responsible for the operational/governance and financial management of all specialties in the division. This incorporated Acute Medicine, Ambulatory Units, Minor Injuries unit, Emergency Departments and the Emergency Dental Clinic, as well as hospital at night and patient flow at Craigavon Area Hospital, Daisy Hill Hospital, and other settings as appropriate. I collaborated closely with senior clinicians and other

## Urology Services Inquiry

disciplines to implement the objectives of the Trust's Delivery Plan and ensure effective multidisciplinary working. I provided clear leadership to all staff in the division, as well as being responsible for effective financial management and the efficient use of all resources. My role does not include the Urology Service.

**Q2. Please also provide any and all documents within your custody or under your control relating to the terms of reference of the *Urology Services Inquiry* ("USI"), except where those documents have been previously provided to the USI by the SHSCT. Please also provide or refer to any documentation you consider relevant to any of your answers, whether in answer to Question 1 or to the questions set out below.**

8. Please find attached all documents within my custody and control in relation to the Urology Service Inquiry, however, most of these documents are not specifically relevant to the Terms of Reference, with the exception of the Clinical Governance meetings on 9<sup>th</sup> April 2021, and the 14<sup>th</sup> May 2021.

See S21 19 of 2022 Attachments for all documents

**Q3. Unless you have specifically addressed the issues in your reply to Question 1 above, please answer the remaining questions in this Notice. If you rely on your answer to Question 1 in answering any of these questions, please specify precisely which paragraphs of your narrative you rely on. Alternatively, you may incorporate the answers to the remaining questions into your narrative and simply refer us to the relevant paragraphs. The key is to address all questions posed. If there are questions that you do not know the answer to, or where someone else is better placed to answer, please explain and provide the name and role of that other person. If you are in any doubt about the documents previously provided by the SHSCT you may wish to discuss this with the Trust's legal advisors, or, if you prefer, you may contact the Inquiry.**

**Your position(s) within the SHSCT**

**Q4. Please summarise your qualifications and your occupational history prior to commencing employment with the SHSCT.**

**9. Qualifications –**

- a) Pupil Nurse June 1983 to June 1984

- f) Acting Assistant Director Medicine and Unscheduled Care, Craigavon Area Hospital, 18<sup>th</sup> March 2020-31<sup>st</sup> August 2020
- g) Acting Assistant Director Unscheduled Care Craigavon Area Hospital 1<sup>st</sup> September 2020-Present

*For all Job Descriptions please see 95. 201102.1.14JDADMUSC 96. 20190816.1.15JDADUC and 97. 2.1HOSMUSC located in S21 19 of 2022 Attachments*

## Urology Services Inquiry

**Q8. It would be helpful for the Inquiry for you to explain how those aspects of your role and responsibilities which were *relevant to the operation and governance of urology services*, differed from and/or overlapped with, for example, the roles of the Medical Director, Clinical Director, Associate Medical Director and Head of Urology Service or with any other role which had governance responsibility.**

20. Having considered all of my roles from 2007, I can confirm that there were no aspects of my roles or my responsibilities that were relevant to the operation and governance of urology services nor did they overlap with the Medical Director, Clinical Director, Associate Medical Director and Head of Urology Service or with any other role which had governance responsibility relevant to urology.

### Urology services/Urology unit - staffing

**Q9. The Inquiry understands that a regional review of urology service was undertaken in response to service concerns regarding the ability to manage growing demand, meet cancer and elective waiting times, maintain quality standards and provide high quality elective and emergency services. This review was completed in March 2009 and recommended three urology centres, with one based at the Southern Trust - to treat those from the Southern catchment area and the lower third of the western area. As relevant, set out your involvement, if any, in the establishment of the urology unit in the Southern Trust area.**

21. I had no involvement in the establishment of the urology unit in the Southern Trust area.

**Q10. What, if any, performance indicators were used within the urology unit at its inception?**

22. I have no knowledge of any performance indicators that were used within the urology unit at its inception.

**Q11. Was the '*Integrated Elective Access Protocol*' published by DOH in April 2008, provided to or disseminated in any way by you or anyone else to urology consultants in the SHSCT? If yes, how and by whom was this done? If not, why not?**

23. The integrated Elective access protocol was not shared with me to disseminate to Urology Consultants as I had no role or responsibilities for Urology Services. In April 2008 I worked as the Head of Non-Acute Hospitals and had responsibility

## Urology Services Inquiry

for Care of the Elderly Service in South Tyrone Hospital, Lurgan Hospital and Mullinure Hospital. After searching my email Archive from 2007 to present I can confirm that this was never provided to me.

**Q12.1 How, if at all, did the '*Integrated Elective Access Protocol*' (and time limits within it) impact on the management, oversight and governance of urology services?**

24. I have had no involvement with the management, oversight and governance of urology services hence I cannot comment on the impact of the Integrated Elective Access Protocol to the service.

**Q12.2. How, if at all, were the time limits for urology services monitored as against the requirements of the protocol? What action, if any, was taken (and by whom) if time limits were not met?**

25. I have had no involvement with the monitoring of the time limits that were detailed in the protocol, hence I cannot comment on what actions were taken if time limits were not met. In my work as AD for Unscheduled care services breaches are monitored using EEMS and there is an ongoing focus/initiatives taken forward to reduce the length of time patients wait in the ED on a bed becoming available at ward level. The Head of Service for Urology Martina Corrigan and the Assistant Director with responsibility for the Urology Services in 2008 Mrs Heather Trouton, and from April 2012 to January 2013, Assistant Director with responsibility for Urology Services Mrs Trudy Reid, and Current Assistant Director Mr Ronan Carroll would be able to best placed to answer this question.

**Q13. The implementation plan, *Regional Review of Urology Services, Team South Implementation Plan*, published on 14 June 2010, notes that there was a substantial backlog of patients awaiting review at consultant led clinics at that stage and included the Trust's plan to deal with this backlog.**

**I. What is your knowledge of and what was your involvement with this plan?**

I was aware that there was a Regional Review of Urology Services, however, I had no involvement with the Team South Implementation Plan which was published on the 14<sup>th</sup> June 2010

**II. How was it implemented, reviewed and its effectiveness assessed?**

I have no knowledge of how the implementation plan was implemented, reviewed or how the effectiveness was assessed.

**III. What was your role in that process?**

I had no role in the process

## Urology Services Inquiry

- IV. **Did the plan achieve its aims in your view? OR Please advise whether or not it is your view that the plan achieved its aims? If so, please expand stating in what way you consider these aims were achieved.**

I am not in the position to answer this question as I had no involvement in the implementation plan nor the Urology Services.

- Q14. Were the issues raised by the *Implementation Plan* reflected in any Trust governance documents or minutes of meetings, and/or the Risk Register? Whose role was to ensure this happened? If the issues were not so reflected, can you explain why? Please provide any documents referred to in your answer.**

26. I had no knowledge nor was I privy to how issues raised by the implementation plan were reflected in Trust Governance documents, nor did I subsequently gain any knowledge regarding the implementation plan. The Risk Register for the Urology Service would sit with the Head of Service and Assistant Director for that Service.

- Q15. To your knowledge, were the issues noted in the *Regional Review of Urology Services, Team South Implementation Plan* resolved satisfactorily or did problems persist following the setting up of the urology unit?**

27. I have no knowledge of the issues noted in the regional review of Urology Services team South Implementation plan were resolved satisfactorily or if problems persisted following the setting up of the urology unit. I have no knowledge of this plan nor have I had responsibilities in the Urology Service. I do not recall attending any meetings in my role as Assistant Director for Medicine and Unscheduled Care where the Implementation Plan was discussed.

- Q16. Do you think the unit was adequately staffed and properly resourced from its inception? If that is not your view, can you please expand noting the deficiencies as you saw them?**

28. I had no operation responsibilities for the urology unit and was not aware of the workforce for this unit, therefore I am unable to comment.

- Q17. Were you aware of any staffing problems within the unit since its inception? If so, please set out the times when you were made aware of such problems, how and by whom.**

## Urology Services Inquiry

29. I was not aware of any staffing problems. When I was in my Head of Service role and was on call for Acute services/ Non-Acute Hospitals if there were staffing gaps on the Urology ward (like any other ward) this would have been escalated to me and actions would have been taken to secure cover for the shifts for example staff offered additional hours/overtime, bank/agency or redeployment from another ward. I would have had no knowledge of any other staffing problems within the Urology service.

**Q18. Were there periods of time when any posts within the unit remained vacant for a period of time? If yes, please identify the post(s) and provide your opinion of how this impacted on the unit. How were staffing challenges and vacancies within the unit managed and remedied?**

30. I was not aware of any vacancies on this ward as I had no operational management responsibilities for it.

**Q19. In your view, what was the impact of any staffing problems on, for example, the provision, management and governance of urology services?**

31. I am not in the position to comment, as I had no operational responsibilities for the urology service in any of my roles.

**Q20. Did staffing posts, roles, duties and responsibilities change in the unit during your tenure? If so, how and why?**

32. I am not in the position to comment, as I had no operational responsibilities for the urology service in any of my roles

**Q21. Has your role changed in terms of governance during your tenure? If so, explain how it has changed with particular reference to urology services, as relevant?**

33. I have had no role or responsibilities in relation to Urology services, however in my role as Interim Assistant Director, I would have attended Clinical Governance Meetings. The only meetings which I attended where the Urology Service was discussed were the meetings on the 26<sup>th</sup> of April 2021 and 14<sup>th</sup> of May 2021.

*See located in S21 19 of 2022 Attachments*

## Urology Services Inquiry

**Q22. Explain your understanding as to how the urology unit and urology services were supported by non-medical staff. In particular the Inquiry is concerned to understand the degree of administrative support and staff allocation provided to the medical and nursing staff. If you not have sufficient understanding to address this question, please identify those individuals you say would know.**

34. I have no knowledge of how the urology unit and urology service was supported by non-medical staff as I had no operational management or governance responsibilities for this area.

**Q23. Do you know if there was an expectation that administration staff would work collectively within the unit or were particular administration staff allocated to particular consultants? How was the administrative workload monitored?**

35. I have no knowledge of the expectation of administration staff for the urology service, nor am I aware of how the administrative workload was monitored as I had no operational management or governance responsibility for the urology service.

**Q24. Were the concerns of administrative support staff, if any, ever raised with you? If so, set out when those concerns were raised, what those concerns were, who raised them with you and what, if anything, you did in response.**

36. I have no knowledge of any concerns from the administration staff and no issues were raised with me as I had no operational/ governance responsibilities for this unit

**Q25. Who was in overall charge of the day to day running of the urology unit? To whom did that person answer, if not you? Give the names and job titles for each of the persons in charge of the overall day to day running of the unit and to whom that person answered throughout your tenure.**

37. The Head of Service for the Urology Service was Martina Corrigan up until Wendy Clayton took over in October 2020 as HOS and still holds this position. The HOS reports into the Assistant Director for Acute Services, Anaesthetics and Surgery who was responsible for the Urology Service.

- a) Heather Trouton was the Assistant Director for Surgery and Elective Care and had responsibility for the Urology service up until April 2012.
- b) Trudi Reid was the Assistant Director for Surgery and Elective Care who had responsibility for the Urology Service from April 2012 to January 2013.
- c) From February 2013 to April 2016, Heather Trouton was Assistant Director for Surgery and Elective Care responsible for the Urology Service.
- d) Ronan Carroll, Assistant Director for Acute Services, Anaesthetics and Surgery, April 2016 to present is currently responsible for the Urology Service.

**Q26. What, if any role did you have in staff performance reviews?**

## Urology Services Inquiry

38. I had no role in staff performance reviews for any member of staff that worked within the Urology Service, as I had no responsibilities for this service during my time as Interim Assistant Director for Medicine and Unscheduled Care. However, in my current position as Interim AD for Unscheduled care it is my role and responsibility to carry out staff performance reviews for the HOS who report directly to me and work within Medicine and Unscheduled care. None of the staff who report directly to me have any role or responsibility for the Urology Services.

**Q27. Was your role subject to a performance review or appraisal? If so, please explain how and by whom and provide any relevant documentation including details of your agreed objectives for this role, and any guidance or framework documents relevant to the conduct of performance review or appraisal.**

39. My role is subject to a performance review by both myself and my manager Mrs Melanie McClements completing a KSF Personal Development Review Form.

*See located in S21 19 of 2022 Attachments 110. 202107.5.0PerformanceReview for an example of this.*

### Engagement with unit staff

**Q28. Describe how you engaged with all staff within the unit. It would be helpful if you could indicate the level of your involvement, as well as the kinds of issues which you were involved with or responsible for within urology services, on a day to day, week to week and month to month basis. You might explain the level of your involvement in percentage terms, over periods of time, if that assists.**

40. Although I would have had no direct involvement with all staff within the urology service on a day-to-day basis, the Sister/senior nurse from the ward (Sister Laura White, Sister Gale McGill and Sister Caroline Caddell) would attend the daily bed meetings, which I chair approximately one day a week. I would have engaged with them when on call. As Head of Service the patient flow manager would contact me if there were any staffing gaps on any ward, and this would have included the Urology Ward. I would not have contacted the staff directly on the ward but would have advised the patient flow manager on the actions to take to ensure the ward was covered safely.

41. In my current role as interim AD for Unscheduled Care, I would attend meetings, i.e., huddles twice per week with other ADs where we would have discussions ranging from bed pressures, updates from our areas, updates from SMT, IPC issues etc. As AD I would be on call with the Heads of Services that work in acute, which includes the HOS for Urology. The HOS will always give the AD on Call an update on the hospital early warning score and contact them for advice if required.

## Urology Services Inquiry

**Q29. Please set out the details of any weekly, monthly or daily scheduled meetings with any urology unit/services staff and how long those meetings typically lasted. Please provide any minutes of such meetings.**

42. The Sister/Senior Nurse (Sister Laura White, Sister Gale McGill and Sister Caroline Caddell) from the urology ward attend the daily flow huddles approx. 3 times a day and once a day on Saturday and Sundays. These meetings last approximately 15 minutes. An example of what information is gathered at these meetings can be seen in appendix 3.1DFH

43. I have had no scheduled weekly, monthly or daily meetings with any Urology unit/Services staff. However, I would attend meetings with all AD's including the AD responsible for the Urology Service. These meetings include and are chaired by the Director of Acute Services and last approx. 60-90 minutes. These include:

- a) Twice weekly huddle meetings lasting approximately one hour,
- b) Monthly clinical governance meetings,
- c) Monthly finance/HR meeting,
- d) Monthly performance meetings.
- e) Monthly Standards and Guidelines meetings

**Q30. During your tenure did medical and professional managers in urology work well together? Whether your answer is yes or no, please explain by way of examples regarding urology.**

44. I have no knowledge of how medical and professional managers worked together in the urology service and no issues were ever brought to me. I would have had no operational management/governance roles for this area.

### **Governance – generally**

**Q31. What was your role regarding the consultants and other clinicians in the unit, including in matters of clinical governance?**

45. I had no role regarding the consultants and other clinicians in the unit in my Interim HOS role and my Interim AD roles. However, in my present role, and when I was previously AD of Medicine and Unscheduled Care, I take part in monthly Clinical governance meetings which the Director of Acute services Mrs Melanie McClements chairs, and all acute Assistant Directors and clinical directors attend. During these meetings, issues were not raised in relation to the Urology Consultants and other clinicians that worked in the Urology unit until the clinical governance meetings which took place in April and May of 2021.

## Urology Services Inquiry

43.-82. 20210514.1.17Acute Clinical Governance Agenda

1. 202109041.1Clinical Governance Minutes

**Q.32 Who oversaw the clinical governance arrangements of the unit and how was this done? As relevant to your role, how did you assure yourself that this was being done appropriately?**

46. I would have had no knowledge into how the clinical governance arrangements of the unit were managed by the operational managers. Mrs Heather Trouton until April 2016, Mrs Martina Corrigan HOS up until October 2020, Mrs Trudi Reid Interim AD until January 2013 and Mr Ronan Carrol from April 2016 until Present would have overseen the clinical governance arrangements for the unit. The operational/clinical governance arrangements for the unit, was not part of my roles or responsibilities. I would have presumed that the governance arrangement in place was reflected in each division within the Acute Service.

**Q33. How did you oversee the quality of services in urology? If not you, who was responsible for this and how did they provide you with assurances regarding the quality of services?**

47. I had no operational/governance responsibilities for the urology service. I am aware in my time working in acute (May 2010 to present), that the following AD's would have responsibility for the Urology service – Simon Gibson, Heather Trouton, Trudy Reid and Ronan Carroll. The Head of Service for this service was Martina Corrigan, up until October 2020 when Wendy Clayton took over and she still remains in this position.

**Q34. How, if at all, did you oversee the performance metrics in urology? If not you, who was responsible for this overseeing performance metrics?**

48. I had no operational/governance responsibilities for the urology service. I am aware in my time working in acute (May 2010 to present), that the following AD's would have responsibility for the Urology service – Simon Gibson, Heather Trouton, Trudy Reid and Ronan Carroll. The Head of Service for this service was Martina Corrigan, up until 2020 when Wendy Clayton took over as Head of Service, and she still remains in this position.

**Q35. How did you assure yourself regarding patient risk and safety in urology services in general? What systems were in place to assure you that appropriate standards were being met and maintained?**

49. I had no operational/governance management responsibilities for the urology service, therefore I had no knowledge of what systems were in place.

**Q36. How could issues of concern relating to urology services be brought to your attention? The Inquiry is interested in both internal concerns, as well as concerns emanating from outside the unit, such as from patients. What**

## Urology Services Inquiry

**systems or processes were in place for dealing with concerns raised? What is your view of the efficacy of those systems?**

50. I had no operational/governance responsibilities in relation to the Urology Service. I have never had any issues of concern regarding the urology service which were brought to my attention by either internal sources or from outside the unit such as from patients. I have no knowledge of what systems or processes were in place for dealing with any concerns raised nor of the efficacy of such systems. Any issues of concern would have been brought to the attention of the HOS and the AD with responsibility for this service

**Q37. Did those systems or processes change over time? If so, how, by whom and why?**

51. I have no knowledge of these systems or whether or not they changed overtime, as I had no operational or governance responsibilities for the urology service.

**Q38. How did you ensure that you were appraised of any concerns generally within the unit?**

52. I had no operational/governance responsibilities for the Urology Service therefore I was never appraised of any concerns generally within the unit, until I attended the Acute Clinical Governance meeting on the 9<sup>th</sup> of April 2021, and 4<sup>th</sup> May 2021.

*See located in S21 19 of 2022 Attachments

43.-82. 20210514.1.17Acute Clinical Governance Agenda  
1. 202109041.1Clinical Governance Minutes*

**Q39. How did you ensure that governance systems, including clinical governance, within the unit were adequate? Did you have any concerns that governance issues were not being identified, addressed and escalated as necessary?**

53. I had no operational/governance responsibilities for the Urology Service, therefore I was not involved with ensuring that governance systems were adequate within the unit, nor did I have any concerns that governance issues were not being identified, addressed and escalated as necessary.

**Q40. How, if at all, were any concerns raised or identified by you or others reflected in Trust governance documents, such as Governance meeting minutes or notes, or in the Risk Register? Please provide any documents referred to.**

54. There were no concerns raised or identified by me or others reflected in Trust Governance documents when I was Interim Assistant Director for Medicine and Unscheduled Care from April 2012 – 2013. However as Interim Assistant Director for Unscheduled Care the learning from the 9 SAI's were shared at an Acute Clinical governance meeting in April 2021 and in the acute clinical Governance meeting in May 2021.

*43.-82. 20210514.1.17Acute Clinical Governance Agenda*

*1. 202109041.1Clinical Governance Minutes*

**Q41. What systems were in place for collecting patient data in the unit? How did those systems help identify concerns, if at all?**

55. I would not have been aware within my role as HOS or Interim AD of the systems in place for the unit in regards to collecting data within the Urology Unit. However, I am aware that we have the following electronic systems—

- a) NICER (Northern Ireland Electronic Record)
- b) PAS (Patient Administration System)
- c) Lab Centre
- d) eEMS (Electronic Emergency Management System)
- e) Picture Archiving and Communication systems

**Q42. What is your view of the efficacy of those systems? Did those systems change over time and, if so, what were the changes?**

56. In my role as HOS and Interim AD, I would use the systems stated above for information and to collate data, which I have found to be efficient. I am aware that there have been software updates to eEMS and NICER, but I have no knowledge of any other updates or changes.

**Q43. During your tenure, how well do you think performance objectives were set for consultant medical staff and for specialty teams? Please explain your answer by reference to any performance objectives relevant to urology during your time, providing documentation or sign-posting the Inquiry to any relevant documentation.**

57. I am unable to comment on this as I have no governance or operational responsibilities for this service

**Q44. How well did you think the cycle of job planning and appraisal worked and explain why you hold that view?**

58. I am unable to comment on this as I have no governance or operational responsibilities for this service

**Q45. The Inquiry is keen to learn the process, procedures and personnel who were involved when governance concerns having the potential to impact on patient care and safety arose. Please provide an explanation of that process during your tenure, including the name(s) and role of those involved, how things were escalated and how concerns were recorded, dealt with and monitored. Please**

## Urology Services Inquiry

**identify the documentation the Inquiry might refer to in order to see examples of concerns being dealt with in this way during your tenure.**

59. During my tenure I was not involved with governance concerns in relation to the Urology Service, which would have impacted on patient care and safety. Any governance concerns would have been escalated to the HOS and AD for the Urology Service.

The documentation the inquiry may wish to refer to is located in S21 19 of 2022 Attachments:

- 109. 20210514.1.18.AcuteClinicalGovMinutes
- 2.-35. 202109041.2Acute Clinical Governance Agenda

- 42. 202109041.1.16LearningfromSAIs
- 43.-82. 20210514.1.17Acute Clinical Governance Agenda
- 1. 202109041.1Clinical Governance Minutes

**Q46. Did you feel supported in your role by the medical line management hierarchy? Whether your answer is yes or no, please explain by way of examples, in particular regarding urology.**

60. I did feel supported by medical line management hierarchy when I was acting interim AD for Medicine and Unscheduled Care (24/04/2012-31/01/2013 and 18/03/2020-31/08/2020) and in my current role as Interim director for unscheduled care. For example, I have direct access to Clinical Directors and divisional Medical Directors on a daily basis. We currently meet formally on a weekly basis, have monthly specialty meetings and Governance meetings and I attend the ED M&M. Most recently, there was a medical and Dental Oversight Committee set up in 2019 which is chaired by the medical director, which the Director of Acute Services, the DMD, and AD attends to discuss any issues or competencies with medical staff. The Medical Director chairs this meeting. As I have not had no operational or governance responsibilities, I would not be meeting with the medical line hierarchy for the urology service. However, if I was required to discuss anything, I would have had no hesitation in contacting the DMD for urology, who is Mr Hayes.

### Concerns regarding the urology unit

**Q47. The Inquiry is keen to understand how, if at all, you, as Assistant Director, liaised with, involved and had meetings with the following staff (please name the individual/s who held each role during your tenure):**

61. The Chief Executive(s); I had no meetings with the Chief Executive (Shane Devlin) regarding the Urology Unit in my role as HOS or Interim AD for Medicine and Unscheduled Care or Interim AD for Unscheduled Care.
62. The Medical Director(s); I attended one meeting where the medical director (Maria O'Kane) shared the main points of the learning from the 9 SAI's. The

## Urology Services Inquiry

details of the SAI's or the SAI's were not circulated. This meeting was on the 9<sup>th</sup> April 2021.

63. The Director(s) of Acute Services; I attended two clinical governance meetings with the Director of Acute Services (Melanie McClements), one of which the Director of Medicine shared the learning from the SAI's on 9<sup>th</sup> April 2021 and the second meeting was on the 14<sup>th</sup> May 2021 which I was in attendance. There was an update given in April 9<sup>th</sup> 2021 clinical governance meeting from Dr Maria O'Kane to share the learning from the 9 urology SAI's. The detail and actual SAI's were not shared, just the learning. On the 14<sup>th</sup> May 2021 there was a paper shared in relation to the learning and recommendations in response to the findings from nine patients, where a doctor did not adhere to agreed recommendations, varied from best practice guidance, and did not involve other specialists appropriately in care Lessons learned Urology. In addition an Admin Review Process was discussed.

*See located in S21 19 of 2022 Attachments*

*109. 20210514.1.18.AcuteClinicalGovMinutes*

*2.-35. 202109041.2Acute Clinical Governance Agenda*

*42. 202109041.1.16LearningfromSAIs*

*43.-82. 20210514.1.17Acute Clinical Governance Agenda*

*1. 202109041.1Clinical Governance Minutes*

64. The other Assistant Director (s); I had no meetings with the Assistant directors regarding the Urology Services – with the exception of the Acute Governance Meeting which I attended in April 2021 and May 2021 – Ronan Carroll, Anita Carroll, Barry Conway, Tracy Boyce, Anne McVey
65. The Associate Medical Directors; I had no meetings with the Associate Medical Directors (Mark Haynes, Damien Scullion, Shahid Tariq, Philip Murphy, Damien Gormley, Gareth Hampton) regarding the Urology Unit – with the exception of the Acute Governance Meeting which I attended in April 2021 and May 2021
66. The Clinical Director(s); I had no meetings with the Clinical Directors (Seamus Murphy, Ted McNaboe, Aoife Currie, Pat McAffery, Una Bradley, Erskine Holmes, Neville Rutherford Jones) regarding the Urology Unit – with the exception of the Acute Governance Meeting which I attended in April 2021 and May 2021
67. The Head of Service; I had no meetings with the Head of service regarding the Urology Unit – with the exception of Patricia Kingnorth Head of Acute Governance who attended the Acute Governance Meetings which I attended in April 2021 and May 2021

## Urology Services Inquiry

68. The consultant urologists. I had no meetings with the Consultant urologist regarding the Urology Unit.

**When answering this question, the Inquiry is interested to understand how you liaised with these individuals in matters of concern regarding urology governance generally, and in particular those governance concerns with the potential to impact on patient care and safety. In providing your answer, please set out in detail the precise nature of how your roles interacted on matters (i) of governance generally, and (ii) specifically with reference to the concerns raised regarding urology services. Where not previously provided, you should include all relevant documentation, dates of meetings, actions taken, etc.**

69. I did not liaise with these individuals in matters of concern regarding urology governance generally nor any concerns regarding the potential impact on patient care.

**Q48. Following the inception of the urology unit, please describe the main problems you encountered or were brought to your attention in respect of urology services? Without prejudice to the generality of this request, please address the following specific matters: -**

**a.) What were the concerns raised with you, who raised them and what, if any, actions did you or others (please name) take or direct to be taken as a result of those concerns? Please provide details of all meetings, including dates, notes, records etc., and attendees, and detail what was discussed and what was planned as a result of these concerns.**

70. From the inception of the Urology unit, the only problems I would have encountered would have been when I was on call and if the ward was short staffed. This would have been raised to me by the patient flow manager who was on duty. This is no different from any other ward or department and to resolve staffing issues we would have authorised shifts to go out to bank/ agency or offer overtime to staff. If the shift was still left unfilled, we would ask the patient flow manager to review staffing on all wards/departments to establish if we could move a member of staff to the ward that required cover to ensure safe staffing levels.

**b.) What steps were taken (if any) to risk assess the potential impact of the concerns once known?**

71. The following steps would have been taken –

- Permanent staff would have been offered additional hours
- Gaps in staffing would have gone out to bank
- Out to agency
- Review the staffing across all wards and departments to ascertain if any extra staff could be redeployed. I.e., Staff member moved from one ward to another

## Urology Services Inquiry

to provide safe staffing levels. This would have been the same actions taken if any ward was short staff, not just Urology

**c.) Did you consider that any concerns which were raised may have impacted on patient care and safety? If so, what steps, if any, did you take to mitigate against this? If not, why not.**

72. If any ward does not have its full complement of staff, we would consider capping the bed complement if there were patient safety concerns. All efforts were made to cover any nursing gaps in all wards.

**d.) If applicable, explain any systems and agreements put in place to address these concerns. Who was involved in monitoring and implementing these systems and agreements?**

73. The Lead Nurse and Head of Service are responsible for ensuring all the nursing gaps are covered. When there are any gaps on the rota the following process is in place –

- Permanent staff would have been offered additional hours
- Unfilled shifts would go to bank, then out to agency
- Review the staffing across all wards and departments
- Consider Redeployment from other wards

**e.) How did you assure yourself that any systems and agreements that may have been put in place to address concerns were working as anticipated?**

74. The above would have been put in place and the Lead nurse for the unit was responsible for advising the patient flow team and the head of service on call prior to going off duty if there were shifts outstanding for their areas in the out of hours period and the actions were taken to try and cover the shifts.

**f.) If you were given assurances by others, how did you test those assurances?**

75. In relation to the shifts being covered this would have provided assurance. In the event any ward had to work down a nurse the clinical coordinator would be asked to provide additional help and support to this ward overnight.

**g.) Were the systems and agreements put in place to rectify the problems within urology services successful?**

76. I have no knowledge of the systems and agreements put in place to rectify the problems within the urology service as I had no managerial or governance roles for this service.

**h.) If yes, by what performance indicators/data/metrics did you measure that success? If not, please explain.**

77. N/A. See above.

**Q49. Having regard to the issues of concern within urology services which were raised with you or which you were aware of, including deficiencies in practice,**

## Urology Services Inquiry

**explain (giving reasons for your answer) whether you consider that these issues of concern were -**

**78. Properly identified** - The only issues of concern that would have been identified to me would have been when I was on call and if the ward was short staffed. All nursing gaps that existed on any wards or departments would have been handed over to the on-call teams. Where last minute nursing gaps occurred in the out of hours period these would have been telephoned out through to the HOS/AD on call by the bed manager.

**79. Their extent and impact assessed** - The extent and impact of nursing gaps would have been assessed and actions taken to provide help to the ward.

**80. The potential risk to patients properly considered** – In the event we could not get cover from bank or agency, staff would have been redeployed to cover gaps and ensure patient safety.

**Q50. What, if any, support was provided to urology staff (other than Mr O'Brien) by you and the Trust, given any of the concerns identified? Did you engage with other Trust staff to discuss support options, such as, for example, Human Resources? If yes, please explain in full. If not, please explain why not. (Q64 will ask about any support provided to Mr O'Brien).**

81. I have never been on call specifically for Urology. As the HOS or AD on call, if there were nursing gaps in the urology ward, I would have supported the staff by ensuring they got help on the ward to cover the gaps. When on call, the HOS and AD provide on call to give advice and support to all wards and departments on Craigavon Area Hospital/ Daisy Hill Hospital/ Non-Acute Hospitals for all wards and services.

**Q51. Was the urology department offered any support for quality improvement initiatives during your tenure?**

82. As I had no operational/governance responsibilities for urology I am unaware of any support for quality improvement initiatives.

**Mr. O'Brien**

**Q52. Please set out your role and responsibilities in relation to Mr. O'Brien. How often would you have had contact with him on a daily, weekly, monthly basis over the years (your answer may be expressed in percentage terms over periods of time if that assists)?**

83. I would have had no roles or responsibilities in relation to Mr O'Brien. I occasionally would have met him in the corridor approximately once every two months and would have just greeted him.

## Urology Services Inquiry

**Q53. What was your role and involvement, if any, in the formulation and agreement of Mr. O'Brien's job plan(s)? If you engaged with him and his job plan(s) please set out those details in full.**

84. I had no role or involvement in the formulation or agreement of Mr O'Brien's Job plan.

**Q54. When and in what context did you first become aware of issues of concern regarding Mr. O'Brien? What were those issues of concern and when and by whom were they first raised with you? Please provide any relevant documents. Do you now know how long these issues were in existence before coming to your or anyone else's attention? Please provide full details in your answer.**

85. I was not in attendance at any meetings specifically regarding Mr. O'Brien. I was not aware of the issues of concern regarding Mr O'Brien until I attended the clinical governance meetings in April 2021 and May 2021. I have no insight into how long these issues were in existence before they came to anyone else's attention.

**Q55. Please detail all discussions (including meetings) in which you were involved which considered concerns about Mr. O'Brien, whether with Mr. O'Brien or with others (please name). You should set out in detail the content and nature of those discussions, when those discussions were held, and who else was involved in those discussions at any stage.**

86. In my interim role as AD of Medicine and unscheduled Care (26<sup>th</sup> May 2021 -12<sup>th</sup> January 2013) and (18<sup>th</sup> March 2020 - 31<sup>st</sup> May 2020) I can confirm that I was not involved in any meetings in relation to Urology services and Aidan O'Brien. However, from May 2020, in my role as interim AD for unscheduled care, I can confirm that at the Clinical Governance meeting on 9<sup>th</sup> April 2021 of which I was in attendance, there was an update given from Dr Maria O'Kane which shared learning from the 9 urology SAI's. The actual SAI's were not shared, just the learning. On the 14<sup>th</sup> May 2021 there was another Clinical Governance Meeting which I attended at which a paper was shared in relation to the lessons learned and recommendations in response to the findings from the nine SAIs, where a doctor did not adhere to agreed recommendations, varied from best practice guidance, and did not involve other specialists appropriately in care Lessons learned Urology. In addition, an Admin Review Process was circulated and discussed. – See located in S21 19 of 2022 Attachments:

## Urology Services Inquiry

**Q56. What actions did you or others take or direct to be taken as a result of these concerns? If actions were taken, please provide the rationale for them. You should include details of any discussions with named others regarding concerns and proposed actions. Please provide dates and details of any discussions, including details of any action plans, meeting notes, records, minutes, emails, documents, etc., as appropriate.**

87. I shared the learning from the nine urology SAs with my team.

*See located in S21 19 of 2022 Attachments  
111. 202104134.1TeamMeetingAgendaActions*

**Q57. Did you consider that any concerns raised regarding Mr O'Brien may have impacted on patient care and safety? If so:**

- what risk assessment did you undertake, and
- what steps did you take to mitigate against this? If none, please explain. If you consider someone else was responsible for carrying out a risk assessment or taking further steps, please explain why and identify that person.

88. I was not aware of any specific concerns raised regarding Mr O'Brien which may have impacted patient care and safety until the shared learning from the SAs on the 9<sup>th</sup> April 2021 (42. 202109041.1.16 Learning from SAs located in S21 19 of 2022 Attachments) where I then would have been aware that the concerns raised would have impacted on the patient care and safety of patients under his care. However, I did not undertake a risk assessment or take steps to mitigate against this as I have no role or responsibilities for the Urology Service.

**Q58. If applicable, please detail your knowledge of any agreed way forward which was reached between you and Mr. O'Brien, or between you and others in relation to Mr. O'Brien, or between Mr O'Brien and others, given the concerns identified.**

89. I was not aware of any agreed way forward which was reached between anyone and Mr O'Brien in relation to any concerns raised about him as I had no operational or governance responsibilities for the urology service.

**Q59. What, if any, metrics were used in monitoring and assessing the effectiveness of the agreed way forward or any measures introduced to address the concerns? How did these measures differ from what existed before?**

90. I was not aware of any metrics used in monitoring and assessing the effectiveness of the agreed way forward nor any measures introduced to address concerns as I had no operational or governance responsibilities for the urology service.

**Q60. How did you assure yourself that any systems and agreements put in place to address concerns (if this was done) were sufficiently robust and**

## Urology Services Inquiry

**comprehensive and were working as anticipated? What methods of review were used? Against what standards were methods assessed?**

91. I am not aware of any systems and agreements in place to address concerns nor any standards such methods would be assessed against as I had no operational or governance responsibilities for the urology service.

**Q61. Did any such agreements and systems which were put in place operate to remedy the concerns? If yes, please explain. If not, why do you think that was the case? What in your view could have been done differently?**

92. I am unaware of agreements or systems which were put in place to remedy concerns nor how they operated as I had no operational or governance responsibilities for the urology service.

**Q62. Did Mr O'Brien raise any concerns regarding, for example, patient care and safety, risk, clinical governance or administrative issues or any matter which might impact on those issues? If yes, what concerns did he raise and with whom, and when and in what context did he raise them? How, if at all, were those concerns considered and what, if anything, was done about them and by whom? If nothing was done, who was the person responsible for doing something?**

93. Mr O'Brien did not raise any concerns with me regarding patient care and safety, risk, clinical governance or administration or any other matters and I am unaware if he ever raised such concerns with any others nor what would have been done about them as I had no operational or governance responsibilities for the urology service.

**Q63. Did you raise any concerns about the conduct/performance of Mr O'Brien? If yes:**

- outline the nature of concerns you raised, and why it was raised
- who did you raise it with and when?
- what action was taken by you and others, if any, after the issue was raised
- what was the outcome of raising the issue?

**If you did not raise any concerns about the conduct/performance of Mr O'Brien, why did you not?**

94. In my role as interim assistant director 24/04/2012-31/01/2013 and 18/03/2020-31/08/2020 and in my current role, I have had no operational or governance responsibilities for the urology service nor was anything brought to my attention surrounding Mr O'Brien's conduct/performance. Furthermore, no one raised any concerns with me.

**Q64. What support was provided by you and the Trust specifically to Mr. O'Brien given the concerns identified by him and others? Did you engage with other Trust staff to discuss support option, such as, for example, Human Resources? If yes, please explain in full. If not, please explain why not.**

## Urology Services Inquiry

95. I did not provide, nor am I aware of any support which was provided to Mr O'Brien, nor of any concerns which had been identified by him or others.

**Q65. How, if at all, were the concerns raised by Mr. O'Brien and others reflected in Trust governance documents, such as the Risk Register? Please provide any documents referred to. If the concerns raised were not reflected in governance documents and raised in meetings relevant to governance, please explain why not.**

96. The only meetings I attended in relation to Urology Service were on the 9<sup>th</sup> April 2021 and the 14<sup>th</sup> May 2021. As AD, at the Acute Clinical Governance meetings, the Risk Register for cancer services (*Appendix 112. 202006086.1CCSRR located in S21 19 of 2022 Attachments*) highlighted 62 Day Cancer risks relating to the 62-day target. The Risk was in relation to safe high quality and effective care due to the Trust failing to meet the 62-day cancer performance standard due to increasing red flag referrals demand outstripping capacity and other regional issues for tumour sites including Urology. The Surgical Elective Care Risk Register (*Appendix 113. 202006086.2SECRR located in S21 19 of 2022 Attachments*) recognises the inability to meet access times performance standards in urology.

### Learning

**Q66. Are you now aware of governance concerns arising out of the provision of urology services, which you were not aware of during your tenure? Identify any governance concerns which fall into this category and state whether you could and should have been made aware and why.**

97. I am now aware of the governance concerns which have arisen out of the Urology services which I was not aware of until April of 2021.

98. Where there are governance concerns escalated, these would be on the risk register and controls are in place to monitor and minimise the risks. Other governance issues can be brought to the attention of staff and management through Datix's, complaints, patient feedback and staff raising issues. Any concerns raised regarding the Urology Services are escalated to the HOS, AD, Clinical Director, and DMD for Urology services. As I had no role or responsibility for the Urology Service, it is my view that concerns should be reviewed and addressed by the AD for Urology Services, HOS for Urology Services, the clinical Director of Urology services and the DMD of the Urology services and this should be supported by the Medical Director.

## Urology Services Inquiry

**Q67. Having had the opportunity to reflect, do you have an explanation as to what went wrong within urology services and why?**

99. Having had the opportunity to reflect and due to my limited awareness, it is difficult to give a clear explanation of what went wrong within the Urology Service and why. This question would be best answered by those who directly managed the Urology service.

**Q68. What do you consider the learning to have been from a governance perspective regarding the issues of concern within urology services and the unit, and regarding the concerns involving Mr. O'Brien in particular?**

100. In my view, where clinical concerns are raised in relation to a clinicians practice, this should be escalated and addressed immediately.

**Q69. Do you think there was a failure to engage fully with the problems within urology services? If so, please identify who you consider may have failed to engage, what they failed to do, and what they may have done differently. If your answer is no, please explain in your view how the problems which arose were properly addressed and by whom.**

101. I cannot comment on this due to my limited awareness surrounding the issues in the urology service. The AD and AMD for the Urology Service would be those in the best position to respond to this.

**Q70. Do you consider that, overall, mistakes were made by you or others in handling the concerns identified? If yes, please explain what could have been done differently within the existing governance arrangements during your tenure? Do you consider that those arrangements were properly utilised to maximum effect? If yes, please explain how and by whom. If not, what could have been done differently/better within the arrangements which existed during your tenure?**

102. I cannot comment on this due to my limited awareness surrounding the issues in the urology service and feel this answer would be best responded by the line managers for Urology.

**Q71. Do you think, overall, the governance arrangements were fit for purpose? Did you have concerns about the governance arrangements and did you raise those concerns with anyone? If yes, what were those concerns and with whom did you raise them and what, if anything, was done?**

103. As the Interim AD I have found the governance arrangements were fit for purpose and I have had no concerns about these arrangements.

**Q72. Given the Inquiry's terms of reference, is there anything else you would like to add to assist the Inquiry in ensuring it has all the information relevant to those Terms?**

104. I have nothing further to add.

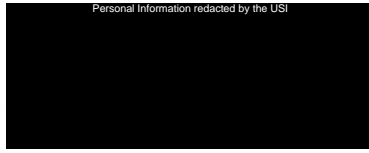

# Urology Services Inquiry

**ACUTE CLINICAL GOVERNANCE**

Date: Friday 9 April 2021

8am Melanie's meeting space. Personal Information redacted by the USI

|     |  |          |
|-----|--|----------|
| 1.0 | <p>Apologies: Clare McGahlie, Barry Conway</p> <p>Attendance Melanie McClements, Patricia Kingsnorth, Damian Scullion, Shahid Tariq, Patricia McCaffery, Ronan Carroll, Philip Murphy, Damian Gormley, Maria OKane, Tracey Boyce, Mary Burke, Anne McVey, Seamus Murphy Erskine Holmes, Gareth Hampton, Aoife Currie, Ted McNaboe, Neville Rutherford Jones, Una Bradley</p>   |          |
| 2.0 | <p>Notes from last meeting</p> <p><b>Notes from last meeting approved for factual accuracy</b></p>   |          |
| 3.0 | <p>Chairs business</p> <p><b>Melanie advised there were two matters arising, one was electronic sign off and one was in relation to the urology SAI.</b></p> <p><b>She handed over to Damian Gormley to address electronic sign off</b></p> <p>Dr OKane – to share the learning from urology SAI</p> <p><b>Maria to set the scene regarding the learning from the SAI. Important that early learning is out as quickly as can, in particular medical staff working in multidisciplinary teams in a meaningful way. In particular to the management of cancers and the role of the specialist nurse practitioners. Taking it back to ensure there is practical working. To provide safety to the patient and also to provide safety to the practitioner, that staff are aware of the sickest patient. Where there are concerns where clinical staff who don't seem to work within the system that we look at how they can be challenged.</b></p> <p><b>There may be some staff who are seen as too important to be challenged. There is a tradition to keep a target of 31 / 62 day targets rather than the quality of care for patients.</b></p> <p><b>There is a look back exercise to look at the patients with the DOH/ HSCB to improve patients safety. There are 20 staff trained in SMR and any learning in those cases will be dissiminated as soon as possible.</b></p> <p><b>If there any concerns about isolation or stress- we need to be sign posting for support.</b></p> | Dr OKane |

Plan will use urology as a test bed for improvement. How can we feed back to nursing and medical to do this. Have been in contact with the staff in Belfast regarding the neurology enquiring to get learning. She apologised that she can't provide the details.

Dr TS said this was a good opportunity to look at our processes. This is the opportunity to get the resources and we are looking forward to improving our services. This is a great opportunity and we will take it.

Pat - this was review was very surprising about this colleague and how can we assure ourselves that this is not happening in our system. We would need a system of assurance particularly in outpatients to avoid it happening again.

Maria acknowledged this as it is difficult to know, one of the approached from Belfast - they are peer reviewing each other work. A system developed in Social work- monthly take a sample of cases load and discuss it, if there were concerns then they instigate a case review which may not be particularly useful. Randomly take 20 charts and review it. she said she is open to any suggestions to improve this.

Maria advised that she has been in contact with Birmingham about the Patterson's enquiry. Separating out 3 different strands - governance/ revalidation and peer review.

Ted- the key around the MDT- but we need to look at the validity of the MDT as some struggle to get the proper representation on the team - radiology/ oncology and pathology. The regional groups have the proper representation. Local groups have difficulty to look at the proper range of specialities are available for all occasions.

Anne said there is a fine line between clinicians and using evidence based practice. She recalled a meeting from a staff member is working with staff and did we have a proper process on how we can listen to staff were raised concerns and were listened it. she cautioned that we need to manage those concerns and we need to support that challenge when things go wrong.

The audit used in NICAN was not strong enough and we need to develop our own tool to ensure it is robust. To ensure follow advice given to keep the patient safe. The process to quality assure the work.

Ronan made a point- medical working in teams - in NI patients put under the care of one doctor, he offered a suggestion that we would need team job plans to ensure the work is checked by a second consultant to provide checks and balances.

Maria - Recognised there is a importance of continuity of care and how that is shared within the team. she wanted to know how do medical staff get to the point of being comfortable to work within a team.

Seamus liked the point about measuring time standards but less good to measure quality cancer. He referred to rectal cancers and how the services have changed. We are not good at measuring the outcome from those.

|            |  |                   |
|------------|--|-------------------|
|            | <p>Melanie acknowledged that and said that as we have been commissioned that this is not acceptable and will take this opportunity to improve quality care and improve patient safety.<br/>Melanie thanked Maria.</p>  | <p>WIT 24557</p>  |
| <p>4.0</p> | <p>Electronic Sign off</p> <p>Dr Damian Gormley and Dr Andrew Murdock to discuss electronic sign off.</p> <p>Damian provided update on electronic sign off. We are best in NI regarding electronic sign off. However, we know there were lots of issues discussed last month, Kate's role is missing due to leave and this post will be replaced.</p> <p>Damian- acknowledged a lot of the good work. There is no denominator in the report to look at the percentages. Quite a large number of areas that have a low number of sign off. He acknowledged this doesn't reflect that results are not being looked at. But we don't have assurances that all results are being signed off. He is aware that the NIECR have issues.</p> <p>Abnormal results when patients are discharged are particular risk. Melanie opened the floor for discussion.</p> <p>Gareth said a specialist post would be required to sign off for ED.</p> <p>Pat- said it works reasonably well for inpatients but very difficult for outpatients. The system is very clunky.</p> <p>Damian agreed it is difficult to sign of multiple results, but individually it is easier. Gareth said it is difficult to sign of radiology reports- can be sorted out quickly on paper but electronically results are back later.</p> <p>Philip- process are not robust enough to remove the paper results.</p> <p>Damian advised if there is a robust system then keep going. However there are abnormal results are still not being followed up.</p> <p>He cautioned that were there are electronic sign off these are not being completed despite paperless.</p> <p>Seamus said the system needs improved to be quicker.</p> <p>In preparation for encampass but it is few years away.</p> <p>Damian advised electronic system is the only way to provide assurance.</p> <p>Melanie asked how do we assure ourselves that as some wards are paperless and the electronic results are not signed off - how can be assured the results are actioned.</p> <p>Erskine said that there are still multiple cases of x rays not being followed up. X ray carried out in ED and patient going to the ward. The admitting physician not following up. These need to be followed up. This has been raised before but despite electronic and paper we don't have a good process of dealing with the results.</p> | <p>Dr Gormley</p> |

parents that they didn't get antibiotics following a discussion about the provision of antibiotics. This has been added into the report but given may not have done. The doctors could prescribe and give antibiotics and nurses could check. There was some discussion about who can prescribe antibiotics and administration of antibiotics. Phil advised there are safety concerns regarding prescribing and administering antibiotics. Some paed's will do in practice. But not necessarily best practice to prescribe and administer antibiotics. There was also an opinion as to whether nurses should be prepared to give antibiotics. There is a skill mix and if a doctor can run a resuscitation that nurses should given antibiotics. There are good guidelines to support staff to give antibiotics. There is no recommendations to say antibiotics should be given as soon as possible. Mary advised there is an issue with paediatric trained nurses. All nursing staff will give iv antibiotic in the emergency situation. They may not be the best person to give antibiotics. There is specific training that staff were to attend but the CEC had stopped training. She plans to send all the nurses both to have training and be signed off as competencies. This is more difficult.

The issues have been raised more on the DHH ED. It is very much team work. Erskine advised that it can be very difficult if the nurses are not trained. That someone can give antibiotics.

Gareth - was concerned that the wording in the report - the child was under care of ED this was not accurate - the child was in ED under the care of paediatrician.

The report shows the sepsis was missed and ED

Ellie will change that child was in ED as opposed to under the care of ED.

Advice leaflet is a patient safety issue and should give parents good advice.

Maria summed up some issues - patient is the main concerns. She feels the report is a very defensive report and she doesn't know how the child is doing. From a medical point of view is there is no reason why the doctor could not have given the antibiotics. We should put the patient first. The family won't care who give the antibiotics. The clinical decision was made to admit to the ward and there was antibiotics. the Phil cautioned - The patient factors - normal vital signs. He advised that there was no recognition that the child was ill during the day until the night team took over. The decision was only made by the night team when the child was admitted. The antibiotics were given as soon as the child deteriorated. There was a failure to detect the child had sepsis. Gareth said the plan was to give antibiotics at 20:45. The recommendation should be about recognition.

Plan to relook at the report and amend to not approve.

Anne highlighted there is a lack of paediatric trained nurses - perhaps needs to go on the risk register.

Phil doesn't agree that there are any inaccuracies in the report and he read out the recommendations. WTT-24560

Not approved until final version brought back.  
Thanked Ellie and Phil.

- Gareth

Gareth presented a case of a patient who was admitted with mental health issues and was taken to DHH as opposed to UHD. He was known to the PSNI for carrying weapons. The patient absconded and was escalated to the PSNI call handler who refused to take the call. The phoned back to the PSNI, the patient was found following a self-inflicted wound to the abdomen. Recommendation. There is no guidance re: phoning the police.

The recommendation regarding concealed weapons, who is the recommendation for. This should be a recommendation to interagency to consider not necessarily the health team.  
Ted if patients are going to a holding cell in a PSNI station if a patient is going to an ED the PSNI should be doing this as a routine.

The report will be shared with PSNI, change recommendation 1+2 to interagency approach.

- Erskine on behalf of MHD

Erskine present the case of a Personal Information redacted by the USI old patient who develop covid at the beginning of covid outbreak when were only learning about the covid infection.

He discussed the report. The discussed the number of attendances to ED and the rationale to keep him in hospital in view of his x ray results. A DNAR was communicated with the patient's mother and brother regarding the decision not to resuscitate a Personal Information redacted by the USI old man. The DNAR was removed following the mother's providing a solicitors request. Despite efforts this man deteriorated and died.

The recommendations are already changed. 9.1 the patient should have a carer there who knows the patient to facilitate and support the patient. It probably needs reworded. There is an electronic health passport for learning difficulty patients to support their care.

Recommendations are fair enough but they need to be the patient's advocate or family (NOK).

Findings section 6 - is this right from a family perspective, relating to the mother's solicitor letter - how does this look from a family perspective.- this may need to be reworded. We need to look at that the care was amended from a threat from a solicitor.

| 1.0 | Apologies: Tracey Boyce, Anne McVey<br>Attendances: Melanie McClements, Patricia Kingsnorth, Philip Murphy, Seamus Murphy, Ted McNaboe, Aoife Currie, Barry Conway, Ronan Carroll, Kay Carroll, Claire McGalie, Shahid Tariq, Una Bradley, Neville Rutherford Jones, Imran Yousuf, Pat McCaffery, Gareth Hampton, Mary Burke and Damian Scullion.  |  |
| 2.0 | Notes from last meeting<br><br><b>last meeting January 2021</b>  |  |
| 3.0 | Chairs business<br><br>Both sure of the summary possession - patient gets e discharge unsure what is meant by notes. Go back to Caroline to look at current processes.<br><br>Discussion about the summary position regarding the SAI <span style="background-color: black; color: white;">Personal<br/>Information</span> . Who would be the best person to represent the trust on this issue. Consensus was it should be the medical review<br><br>Strategy for Acute services which will be framed which will look at every speciality and interface with community re: preventing admission and timely discharge. It will be discussed with the senior team is taking place today, Melanie will sent a questionnaire with Ads/ CDs to discuss issues. There will be themed events to discuss before 5 year plan is agreed. This will be circulated today. Draft should be completed by September. A high level draft by July. To inform the work in acute services. There was some discussion about what is the clear vision for services.<br><br>The urology SAI is nearing its end point the public enquiry chair has been announced. No details on TOR. Learning from current SAI will be shared with us as acute clinical forum and the clinical teams as soon as possible |  |

|-----|--|----------|
| 4.0 | <p>Electronic Sign off</p> <p>WIT-24568</p> <p>General thoughts for electronic sign off issues. Seamus said that education to see how to work it effectively. A trust wide training programme. Neill Morgan, Donna Muckian real champions for it. Some staff feel it is not user friendly. Seamus advised that the champions can advise how it works really well. Ted advised about electronic referral letters there is a weakness that the emails all correspondence need the letters go through an ECR system for consultant to consultant referrals. Barry and Ronan are looking at the systems around this how to address internal referrals internally.</p> <p>Ted suggested a simple solution any internal referrals are carried out by one standard form through the electronic system.- picked up by system if this email is not picked up.</p> <p>Barry advised Anita going to look at SOP in place - what is the back up with secretary - look at an electronic process. She will discuss with Mark Toal. Needs a resolution. Ronan clarifies- two type of referrals in patient and out patient referrals. The outpatient referral will possibly be at risk.</p> <p>Gareth- electronic sign off for ED cannot be done without additional resources. Mary advised the internal referrals need to be looked at. In patient sign off is going very well for most areas but clinics is more difficult.</p> <p>These processes are crucial and would require a working group - with Damian Gormley and Neill Morgan to set it up. Action go back to Damian Gormley and see if it is workable.- PK</p> <p>Una said there are not enough computers .</p> <p>Barry- advised that Donna Muckian had some technical issues regarding the lack of results being shared with the clinical teams- locum consultants/ need index of consultant codes/ issues around minimum data set- need a more robust safety net. There is further discussion to take place.</p> <p>Claire advised there needs to be very clear rationale as to the benefits of the requirements of ECR. There are some results are not transferrable to ECR.</p> <p>There was recognition it would work well in smaller specialities but more difficult on larger scales.</p> <p>Extend an invite to Damian</p> |          |
| 5.0 | <p>SA/s</p> <p><i>There are 4 CYP reviews which have through the paediatric scrutiny process and need sign off from acute perspective. One acute case for representation following non approval in January (Personal Information redacted by the [REDACTED]).</i></p> <p><i>Aoife/Meeta for paed</i></p>   | AMDs/ CD |

Aoife presented this case lady antenatal care and intrapartum care.  
 Comments. There are no signs of sepsis with the mother most of these infections are vertical transmissions. The issues with the care she shouldn't have been in MLU and issues with CTG. The lack of lessons learnt. No issues with would have impacted on the care- Approve.

ED Gareth/ Erskine

Case presented by Gareth- child attended ED. Discharged home but reattended 2 days later referred to paed- gastroenteritis. Bloods done noted raised crp. Baby diagnosed with meningitis.

Recommendations page 15 paragraph 4. The wording of the recommendations in 4,5,6 and 7. Needs to be reviewed.

Mary advised there are only a few staff trained in administering antibiotics to children in ED- as soon as staff get trained, they leave. Mary and Bernie looking at working with cores staff in CAH to trained in Paed antibiotics PLS. new consultant with special interest in paed.

There is an issue with the overcrowding in the department. Such a sick child should have been admitted. Pat asked can be assured that a sick child could be administered antibiotics. Could any consultants give antibiotics? There was a reg and SHO explaining to the parents that the child would get antibiotics to wait to go to the ward.

Need to work with Gareth re: appropriateness of recommendations.

Sepsis in a 4 month old is difficult to recognise. There are other issues which are not addressed in the report. Not approved.

This is a wider issues which needs address through interface with ED and paed.

Discussion that would be useful for paed to be present at SMT meeting to speak on behalf of the reports Melanie to discuss with Paul Morgan.

Damian/ Shahid

Tooth extraction Personal Information redacted by the USI old and Personal Information redacted by the USI old child

Shahid to present these cases needs to be present to present the case.

Personal Information redacted by the USI - The starting point in the case for dental extraction. This is the wrong tooth extraction. This was the second case following a similar incident.

The recommendations. - 1. No problem.

The recommendation 3- training for recovery staff as more difficulty He highlighted the issues with compliments of nursing theatre staff.

Personal Information redacted by the USI occurred in Nov 2017

Learning disability child - wrong tooth taken out.

Shahid advised the CD for dental and look at the pathway and how they are going to move forward.

*Philip presented - representation of a lady who was brought into emergency department, referred to medicine - asked for surgical opinion. Surgeon not surgical issues, patient transferred to AMU and no communication between surgery and medicine.*

*Which has been in several drafts - agreed by most people but not surgery. Team needs to take ownership of the patient. If other specialty to refer. Issues around specialist surgical team.*

*TED comments that this happens frequently in ENT but very happy to champion shared care. Where there is a blurring of the edges between specialities for a period of shared care should be made. This works effectively. There is an emphasis acute medical problems and shared care should be established practice.*

*It should be ED responsibility.*

*Seamus asked for the facility for shared care - the white board is not functioning for joint ownership.*

Report - approved

*There are 19 ongoing SAI reviews.*

Received from Mary Burke on 01/07/2022. Annotated by the Urology Services Inquiry.

| 11.0 | <p>Any Other Business</p> <p><b>Management of children in adults ward- training is not good, there is a need for an real effort to move the training to get 3 elements to hyponatraemia training.</b></p>   |           |              |

|      |  |           |
|------|--|-----------|
|      | <p>BMJ/ CEC training/ Face to face</p> <p>PK to send the training matrix for medical staff again.</p> <p>Damian - concern of over sight from his department needs a robust system to see which staff are trained.</p> <p>Revalidation have a record of safeguarding and hyponatraemia need to see the weakness. Need to have a read across from medical director.</p> <p>Ronan</p> <p>The drive through phlebotomy is open - he asked that all clinicians can use it. Patients can have bloods done within a week. to reduce footfall for patients.</p> <p>Need to ramp up the capacity. The details have been circulated.</p> <p>Martin King invited for presented on patients experience.</p> <p>Gareth, Mary Melanie and I spoke after the meeting to discuss the issues with a prominent SAI involving a mental health patient.</p> <p>Many of the issues are as a result of the PSNI and NAIS repeating the same issues as a previous high profile case. The criticism in the last report was that the PSNI were not contacted soon enough, this time the PSNI handler refused to take the referral. Gareth advised there has been a huge amount of work done from a mental health perspective which is largely working well. We need support from PSNI and NIAS to complete the circuit.</p> | WIT-24572 |

# Root Cause Analysis report on the review of a Serious Adverse Incident including Service User/Family/Carer Engagement Checklist

Organisation's Unique Case Identifier:

Date of Incident/Event: **22 April 2020**

HSCB Unique Case Identifier: Personal information redacted by the USI

Service User Details: (*complete where relevant*)

D.O.B: Personal information redacted by the USI

Gender: **Female**

Age: Personal information redacted by the USI **years**

Responsible Lead Officer: **Dr Beverley Adams**

Designation: **Consultant Obstetrician and  
Gynaecologist**

Report Author: **The Review Team**

Date report signed off:

Date submitted to HSCB:

June 2015

## 1.0 EXECUTIVE SUMMARY

Patient XX experienced preterm pre-labour rupture of membranes on [Personal Information redacted by the USI] at 31 weeks' gestation.

Despite treatment with oral antibiotics, she developed infection of the membranes around the fetus and presented with sepsis on [Personal Information redacted by the USI], when intrauterine fetal death was diagnosed. Clinical signs became abnormal from [Personal Information redacted by the USI] onwards. The option of earlier delivery was not discussed with Patient XX, given her preterm gestation. It is not clear if earlier delivery would have prevented Patient XX developing such a severe infection.

It is not clear if Baby XX would have survived, given the major factors of prematurity and intrauterine infection.

However, the parents are clear that they would have liked to have discussed the option for delivery and the associated risks.

## 2.0 THE REVIEW TEAM

*Dr Beverley Adams – Consultant Obstetrician and Gynaecology (Chair)*  
*Mrs Mary Dawson – Lead Midwife*  
*Mrs Ursula Gaffney – Risk Management Midwife*

## 3.0 SAI REVIEW TERMS OF REFERENCE

The terms of reference for the review of the care and treatment provided to Patient XX were:

- To carry out a review of the care provided to Patient XX by the Southern Health and Social Care Trust from 22/11/19 involving care in Integrated Maternity and Women's Health
- To identify key causal and contributory factors leading to the stillbirth of infant Patient XX
- To use a multidisciplinary approach to the review using a systems analysis methodology
- To engage with Patient XX's family in line with Regional Guidance on Engagement with Service Users, Families and Carers
- To agree the outcome of the review and subsequent recommendations, actions and lessons to be learned
- To adhere to principles of confidentiality throughout the review
- To report the findings and the recommendations of the review to the Director of Acute Services SHSCT, and disseminate to the staff associated with care and Patient XX and her family

June 2015

**4.0 REVIEW METHODOLOGY**

- The review of Maternity Hand Held Health Records
- Discussion with staff involved
- Inclusion of comments and questions from Patient XX and her husband

**5.0 DESCRIPTION OF INCIDENT/CASE**

A summary of the case follows; Appendix 2 is a detailed timeline of events.

Patient XX booked for consultant led antenatal care in her second pregnancy.

She was a healthy Personal Information redacted by the USI-old woman, with a history of treatment to her cervix because of abnormal smears.

Her booking BMI was 36.15 kg/m<sup>2</sup>.

Patient XX attended a consultant led clinic for assessment of cervical length by ultrasound scan.

She self-referred to the Maternity Assessment Unit on Personal Information redacted by the USI at 01:15 (31 weeks' gestation); a diagnosis of premature pre-labour rupture of membranes was made.

Patient XX was admitted and was treated with oral antibiotics in keeping with the contemporaneous guidance.

Concerns were raised about her heart rate and the fetal heart rate pattern on cardiotocography (CTG) recordings.

Patient XX was reviewed by a consultant each day and was discharged to home on Personal Information redacted by the USI.

She returned for review on Personal Information redacted by the USI at 09:30 and was reassessed by a Trust Grade doctor, before being discharged home in and around 12:30.

Patient XX contacted the Maternity Assessment Unit again on Personal Information redacted by the USI at 13:00, when she described feeling shivery and had some brown vaginal staining.

When she returned at 13:30 on Personal Information redacted by the USI, she was felt to be in labour and was transferred quickly to the Delivery Suite.

The Sepsis 6 bundle was implemented at 13:42.

The fetal heartbeat could not be heard and intrauterine fetal death was confirmed by ultrasound scan at around 13:43.

June 2015

## 5.0 DESCRIPTION OF INCIDENT/CASE

Patient XX proceeded to augmentation of labour with a Syntocinon infusion as well as treatment with intravenous antibiotics.

She delivered a stillborn [Personal Information redacted by the USI] at 02:35 on [Personal Information redacted by the USI], of birthweight 1770g.

Patient XX continued to receive intravenous antibiotic treatment until review on [Personal Information redacted by the USI] at 09:25, when oral antibiotics were recommended.

She was discharged to home on [Personal Information redacted by the USI] at 10:30 but reattended later that day at 23:30 with a history of feeling unwell at home and of a high temperature.

Patient XX was readmitted and treated with intravenous antibiotics until review on [Personal Information redacted by the USI], when treatment was changed to oral antibiotics before discharge to home.

Patient XX and her husband have been offered support from the Bereavement Midwife and continue to engage with this.

Patient XX contacted the Maternity Assessment Unit again on [Personal Information redacted by the USI], describing an increased temperature, and was advised to attend.

She was reviewed by a consultant and underwent repeat examination, ultrasound scan and explanation of results before discharge to home.

Histopathological analysis of Patient XX's placenta was reported on [Personal Information redacted by the USI] and concluded that there had been evidence of ascending maternal genital tract infection with a severe fetal inflammatory response.

The cause of death of Patient XX's [Personal Information redacted by the USI] is therefore understood to be infection.

## 6.0 FINDINGS

Patient XX submitted questions after a consultation with a Consultant on [Personal Information redacted by the USI] and after discussion with the Bereavement Midwife on 22 September 2020.

The review team engaged with Patient XX on 17 September 2020.

The SAI Chair spoke with Patient XX and her husband on 17 December 2020, when some additional issues were addressed.

The original table of questions and subsequent additional questions submitted by Patient XX are found at Appendix 1, along with responses from the review team.

The review team met with staff involved over two separate morning sessions, 28 September 2020 and 5 October 2020.

The team reviewed the care of Patient XX with the aim of identifying causative and contributory factors, using a fishbone analysis.

June 2015

**6.0 FINDINGS**

The cause of the death of Patient XX's baby, Baby X, was infection.

Despite having systems in place to aid interpretation of CTG traces, i.e. the proforma from the NI Regional Maternity Collaborative, abnormalities were apparent from [Personal Information redacted by the USI] onwards but were not actioned.

Similarly, maternal observations were checked but an increase in Patient XX's heart rate was not acted on ([Personal Information redacted by the USI] onwards).

It is not clear if earlier delivery of Patient XX's baby would have resulted in survival of Baby X or if it would have prevented Patient XX developing sepsis.

Several factors were felt to be contributory.

1. Interpretation of CTG traces at gestations less than 34 weeks is difficult. The normal patterns of fetal brain activity are not completely established at this stage. This can make it difficult to know if the beat to beat variability is normal or reduced.
2. When reduced variability was noted on the CTG, the trace was continued for various lengths of time<sup>1</sup>. There seemed to be a reluctance to classify the CTG as being not normal (usually 40 minutes is adequate) and a tendency to keep it in place to see if it improved over time.
3. The 'buddy' stickers available to facilitate systematic interpretation of the CTG were used well by the midwives, but not always by the doctors, although it is not clear if using the sticker as an aide memoire would have resulted in a different assessment of CTG features.
4. At discussion the midwife allocated to antenatal patients seems to have been responsible for care of several high-risk patients without additional help from colleagues on several different shifts.
5. At the time in question, the doctors seem to have been covering multiple clinical areas at the same time, because of working patterns during Covid
6. A lack of overview of the whole clinical picture and the changing patterns of CTG traces, maternal observations and blood results was apparent.
7. The midwifery staff identified concerns at several different times but were reassured when the doctors did not find the concerns raised to be worrying. With the benefit of reflection, the midwives were correct.
8. The most recent professional advice<sup>2</sup> regarding prevention of preterm labour and cervical length scans recommends transvaginal ultrasound scans, as opposed to transabdominal scans (as were used in this case). It is not clear if this

<sup>1</sup> Appendix 4 is a summary of results of tests and observations over time, to demonstrate trends; this includes the duration of CTG recordings.

<sup>2</sup> See Appendix 3 which is a summary of the professional guidance in place at the time of Patient XX's delivery.

**6.0 FINDINGS**

difference in scanning practice would have affected the eventual outcome or affected whether or not a cervical stitch was indicated.

9. Delivery at 31 weeks' gestation is associated with many complications, the most significant being breathing difficulties, although other longer-term complications are also important, such as cerebral palsy and developmental problems<sup>3</sup>. There is no evidence of any discussion between Patient XX and the attending staff about the balance between risks of delivery and risks of supportive management.
10. Earlier delivery of Baby X was indicated but there is no assurance that Baby X would have survived after delivery, given the severe sepsis identified in the histopathology report. To date, there is no reliable clinical sign to check which identifies the onset of infection in the membranes and fluid around the baby. It is not uncommon for histopathology results to demonstrate severe infection in the umbilical cord and membranes and for the mother to have been clinically asymptomatic. Nor is there any way to predict the long-term survival rates of Baby X.

**7.0 CONCLUSIONS**

It is not clear if Baby X would have survived if delivery had been achieved before Personal  
at  
Inform  
ation Personal  
at  
Inform  
ation  
Personal Information redacted  
by the USI.

Infection of the membranes around the baby is recognized as a cause of stillbirth but is not completely understood. It is not uncommon for histopathology reports to include information about infection around the membranes and the baby when the maternal observations were completely normal.

However, maternal observations were not normal in this case, nor were the CTGs or blood test results.

Despite recognition of abnormal findings, the option of delivery, albeit associated with many complications for the baby, was not considered.

The review team has reflected on the findings and makes several recommendations (as below) to mitigate the risks of recurrence of this clinical scenario in the future.

**8.0 LESSONS LEARNED**

1. CTG interpretation can be difficult, especially for antepartum preterm babies and inter-observer variation is a significant risk factor. The use of Dawes Redman system will provide an independent assessment with removal of inter-

<sup>3</sup> The patient information published on the Tommy's website is useful and includes discussion of problems with hearing, vision and cerebral palsy. <https://www.tommys.org/pregnancy-information/premature-birth/taking-your-baby-home/health-problems-and-disability>.

observer variation: this is the best way to inform decision and inform escalation.

2. Decisions at gestations less than 34 weeks are difficult and consultant peer discussion and review may be useful and should be encouraged. If the CTG assessment is not normal after 60 minutes of a continuous trace, review of the treatment plan, the consultant of the week or consultant on call should review the patient's clinical findings and treatment plan urgently.
3. In common with other reports, it is important to highlight the importance of retaining a clinical overview for each patient, to include their clinical history and trends especially when workload pressures are high; it is easy to become task focused.
4. If any member of the MDT has a concern about a patient, this should be explored in full, with an 'open eyes' approach to review of the clinical features.
5. Measurement of cervical length should be completed by using transvaginal scan by an appropriately skilled clinician.
6. Full discussion of the clinical findings, risks and options for treatment with the patient should be facilitated by a senior obstetrician (preferably the consultant) for pregnant women, especially in the context of preterm delivery and uncertainty about long-term survival.
7. All Consultants in O&G should be aware of the option to discuss findings and options for treatment with a consultant peer. During daytime hours, this can usually be achieved with another consultant peer on site. For discussions out of hours, each of the Maternity Units has a consultant on call and who should be available for peer review.

## 9.0 RECOMMENDATIONS AND ACTION PLANNING

1. Consideration of the Dawes-Redman assessment for antenatal CTGs. This is a computerised assessment comparing CTG features against a large database of normal features and is already used within other units in the region. It aims to reduce inter-observer variation in interpretation of antenatal CTGs by assessing fetal heart rate patterns against a database of reassuring features.
2. The MDT teaching programme should include sessions aimed at learning from incidents relating to Human Factors and 'helicopter views' on alternate months; this should include appropriate communication with the mother. This teaching should embed an 'open eyes' approach to reviewing clinical situations.
3. All ultrasound scans to measure cervical length should be transvaginal unless the woman declines to consent.
4. Women admitted with clinically complex problems should be made aware of the available treatment options and associated risks, including clinical

June 2015

**9.0 RECOMMENDATIONS AND ACTION PLANNING**

uncertainties. These discussions should be summarised in the clinical notes along with a provisional plan for treatment as agreed by the mother and clinical team. We suggest identification and audit of the charts of these patients at 6 & 12 months.

**10.0 DISTRIBUTION LIST**

June 2015

# WIT-24609

## Checklist for Engagement / Communication with Service User<sup>1</sup>/ Family/ Carer following a Serious Adverse Incident

(This checklist should be completed in full and submitted to the HSCB along with the completed SAI Review Report  
for all levels of SAI reviews)

## 1.0 EXECUTIVE SUMMARY

XX, a young infant, [Personal Information redacted by the USI] old, was brought to the Emergency Department by her parents on [Personal Information redacted by the USI] presenting with 'high temperature, being sick (vomiting), not drinking'. XX was assessed, then reviewed after a relatively short time, before being discharged home with advice to re-attend if any further concerns. The review team consider that XX should have been observed for up to 4 hours to confirm inadequate feeding/behaviours on her first presentation to ED. This would have enabled a more adequate assessment which should have involved urine analysis, consideration of blood tests and possible admission depending on findings.

On [Personal Information redacted by the USI] XX re-attended the Emergency Department (ED) at 12:00 hours with concerns regarding not feeding, vomiting, high temperature, very lethargic and irritable. XX was reviewed and admitted to the Paediatric Ward at 23:00 hours.

Salient features pointing to the high likelihood of serious bacterial illness (and possibly meningitis) in this infant included poor feeding, vomiting, fevers and 'clinginess' (abnormal behaviour) plus crying and irritability.

A series of factors contributed to a delay of approximately 12 hours from re-attendance, to administration of antibiotic treatment. Significant delay occurred between the time when decision to 'admit' was made, to actual paediatric admission. The patient flow between the Emergency Department and the Paediatric Ward was unsatisfactory.

The review has established that there was a delay in administration of antibiotics to XX. When serious bacterial illness is likely and/or there are predicted or actual delays in admission to hospital wards for treatment antibiotics should be given in Emergency Departments.

The review of this case has identified a number of factors which resulted in the delayed diagnosis and provision of emergency treatment for meningitis.

### 1. Recognition of the sick child

The review team has identified that ED and paediatric medical staff failed to recognise how sick XX was. The review team consider that staff failed to consider differential diagnoses while assessing XX. This resulted in blinkered thinking and the inappropriately narrow focus on a diagnosis of viral illness/gastroenteritis.

### 2. Assessment/Task Factors

The review team identified that consideration was not given by ED and Paediatric staff to commence antibiotic treatment in the ED. This missed opportunity contributed to the delay in provision of appropriate antibiotic treatment.

### 3. Organisational Factors/Resources

The review team identified that demands within the ED and paediatric ward led to delay in assessment and appropriate treatment for XX. In addition, the review team consider that the shortage of paediatric trained nurses working in ED may have compromised medical decision making and multidisciplinary input on both

presentations to ED.

#### 4. Individual staff factors

The review team consider that doctors working in the Emergency Department as well as a doctor in the Paediatric Department failed to recognise a number of signs to potential sepsis/serious bacterial illness when assessing XX on [Personal Information redacted by the USI].

#### 5. Communication

The review team consider that the delay in transfer from ED to the paediatric ward on the [Personal Information redacted by the USI] was impacted by capacity limitations on the paediatric ward and inter-team and intra-team communication difficulties, delayed handover and multiple demands on the paediatric service.

#### 6. Education and training

The review team consider that the lack of paediatric trained/experienced nursing and medical staff in the ED led to delayed recognition of XX's presenting signs, and deteriorating condition.

#### 7. Patient factors

The review team acknowledge that XX had relatively reassuring vital signs on both presentations. The 'Paediatric Early Warning Score' recorded at presentation on [Personal Information redacted by the USI] was normal ('0'), albeit with no reference to blood pressure. Unremarkable vital signs may have contributed to the failure of health professionals to pick up on the other clues to potential sepsis that were evident from the history.

The review team identified good practice relating to the treatment and care provided to XX when she arrived onto the paediatric where treatment for sepsis was provided in line with Sepsis Six guidance.

#### The review team identified the following recommendations:

1. The review team recommend that the HSCB/Department of Health/Trust seek to enhance permanent medical staffing numbers and acquire paediatric trained nursing staff to work in all Trust Emergency Departments.
2. Uptake of two National e-Learning resources, namely 'Sepsis in Children' from the Sepsis Trust (UK) (2020) and 'Spotting the Sick Child' (RCPCH,) (2020), should in future be required of newly appointed medical and nursing staff involved in clinical decision-making with regards children including:
  - a. Paediatric, Primary Care and Emergency Trainee Doctors
  - b. Paediatric Nursing Staff
  - c. Triage Nurses in Emergency and Primary Care
3. Medical staff involved in the assessment and management of XX should undertake reflective learning and complete the online course 'Spotting the Sick Child', with successful certification, also the Sepsis Trust e-learning modules 'Introduction to Sepsis' and 'Sepsis in Children'.

4. The review team recommend that long term or regular locums should receive the same induction, supervision and support to maintain competencies as other staff.
5. Where a decision is made to discharge a child with ongoing symptoms/signs, parents/carers should be advised of timeframes in which they should return if symptoms persist, as well as specific triggers which require earlier review. It is good practice to provide written advice in addition to documented verbal advice.
6. The Trust should have a principle of encouraging early prescription and administration of intravenous antibiotics to infants/children that are considered to have actual or possible sepsis/serious bacterial illness prior to transfer to the Paediatric Ward, unless immediate transfer is in process, in keeping with the 'Sepsis 6' care bundle.
7. All staff should be actively encouraged to alert their Line Managers (including On Call Consultants) in a timely fashion, where concerns exist in relation to service capacity. Ward Mission Statements that include 'Trigger Points for Escalation', displayed in relevant clinical areas, may be a means of communicating this, as well as specific reference to the principle at induction.

## 2.0 THE REVIEW TEAM

Dr Phil Quinn, Consultant Paediatrician, Chair  
 Anne O'Reilly, Lead Nurse, Paediatric Services  
 Eleanor McCormick, Emergency Department Consultant  
 Sharon Holmes, Ward Manager, Emergency Department  
 Marita Magennis, Clinical & Social Care Governance Co-ordinator, CYPS  
 Dr Jenny Hughes, Consultant Paediatrician, Independent Paediatric Expert

## 3.0 SAI REVIEW TERMS OF REFERENCE

- To carry out a review of the care and treatment provided to XX by the Southern Health and Social Care Trust from initial presentation at the Emergency Department on [Personal Information redacted by the USI] until her transfer to the Paediatric Intensive Care Unit in Royal Belfast Hospital for Sick Children on [Personal Information redacted by the USI].
- To use a multidisciplinary team approach to the review.
- To provide an agreed chronology based on documented evidence and staff accounts of events.
- To engage with XX's family in line with Regional Guidance on Engagement with Service Users, Families and Carers (November 2016).
- To carry out an analysis into the care provided to XX using the National Patient Safety Agency Root Cause Analysis methodology and SAI Guidance.
- To ensure that any relevant recommendations are made in line with evidenced based practice.
- To set out the findings, and if relevant lessons learned, recommendations, and actions in an anonymous report.

### 3.0 SAI REVIEW TERMS OF REFERENCE

- To adhere to the principles of confidentiality throughout the review.
- To report the findings and recommendations of the SAI Review to the Director of CYPS and Director of Acute Services, Southern Health & Social Care Trust (SHSCT), the staff associated with the care of XX, the Health & Social Care Board (HSCB), Public Health Agency (PHA) and XX's family.

### 4.0 REVIEW METHODOLOGY

- Review of patient/service user records and compile a timeline.
- Review of staff/witness statements.
- Interviews with relevant staff concerned
  - Organisation-wide
  - Directorate Team
  - Ward/Team Managers and front line staff
  - Other staff involved
  - Other professionals (including Primary Care)
- Specific reports requested from and provided by staff.
- Outline engagement with service users/family members.
- Review of local, regional and national policies and procedures, including professional codes of conduct in operation at the time of the incident.

Review of documentation, eg consent form(s), risk assessments, care plan(s), photographs, diagrams or drawings, training records, service/maintenance records, including specific reports requested from and provided by staff etc.

### 5.0 DESCRIPTION OF INCIDENT/CASE

XX attended the Emergency Department (ED) at 09.15 hours on [Personal information redacted by the USI] due to concerns regarding not feeding, a high temperature and had vomited morning feed. XX was reviewed by ED Doctor 1 (Locum Middle Grade) at 10.10 hours. Heart rate (HR) 180, respiratory rate (RR) 34, temperature (TEMP) 37.5, saturations (SpO2) 96%, blood glucose (BM) 6, capillary refill time (CRT) 0-2, alert. No diarrhoea, cough or rash noted. Examination of ear, nose and throat was normal. XX's abdomen was soft and non-tender. There was good air entry in the chest. The differential diagnosis was a viral infection or gastroenteritis.

XX had observations recorded onto the Regional Paediatric Early Warning Score Chart ('PEWS' chart) at 10.25 hours, 11.50 hours and 12.30 hours but without blood pressure recordings. Capillary refill was entered as less than 2 seconds, and her heart rate moved from outside normal limits (169) to within normal limits (158) during

**5.0 DESCRIPTION OF INCIDENT/CASE**

this time. As a result XX's total 'PEWS score was only 1 or 'zero'.

At 10.25 hours XX's temperature was recorded by ED Nurse 1 as pyrexia 38.0. XX was given paracetamol at 11.15 hours by ED Nurse 1 and tolerated 3 ounces of Dioralyte. Cyclizine was prescribed, however was not administered with nursing documentation recording 'not available in ED'.

XX was reviewed at 12.30 hours and was noted to be settled and sleeping, no further vomits. XX was discharged with the advice to continue Dioralyte and to re-attend if further concerns.

XX re-attended the ED on [Personal Information redacted by the USI] at 11.57 hours due to concerns regarding not feeding, high temperature, vomiting and was very lethargic and irritable. Observations undertaken at triage at 12.11 hours were noted to be HR 131, RR38, Temp 37.6, Spo2 99%, Glasgow comma scale (GCS) 15, CRT 0-2, BM 6.7, alert.

XX was reviewed at 14.00 hours by ED Doctor 2 (Staff Grade Emergency Doctor). XX's mother reported that XX had been vomiting following every feed, and for the previous three days had loose dirty nappies (no wet nappies). XX's mother reported that XX had a 5 ounce feed on [Personal Information redacted by the USI] (previous day). XX's temperature had been up and down for a number of days, she had a history of bronchiolitis 2 weeks ago but has now recovered. Vaccines are up to date except for the last set which were delayed due to bronchiolitis.

On examination by ED Doctor 2 XX was noted to be pale, sleepy, with a high pitched cry, CRT 2-3 seconds, fontanelle normal, no rash, chest clear, abdomen soft and non tender, Kernig's sign negative. XX's ears were described as waxy, unable to see thematic membrane, nose (NAD) and throat was red, however tonsils were not enlarged. XX's tongue was coated. Paracetamol was administered at 14.50 hours by ED nurse 3.

ED Doctor 2 discussed XX's condition with Paediatric Doctor 1 (Paediatric Day SHO) by phone. The assumed diagnosis was viral gastroenteritis with poor fluid intake. Paediatric Doctor 1 informed the supervising Paediatric Doctor 2 (Paediatric Day Registrar) of XX's condition. Paediatric Doctor 2 and Paediatric Doctor 1 were busy with a baby in the Special Care Baby Unit (SCBU) which required transfer out of hospital. It was agreed that the paediatric team would review XX in ED and to encourage fluids in ED until then. ED Doctor 2 noted that XX seemed to be uncomfortable, moaning and unhappy.

At 16.50 hours Paediatric Doctor 2 attended ED and undertook a review of XX. A history and examination was undertaken. It was noted that XX had re-attended ED with a history of vomiting for two days, one loose stool yesterday and 3 to 4 vomits since yesterday. XX had reduced oral intake and no wet nappies, however had two wet nappies this morning. XX was noted to be unwell since Thursday with vomiting, crying and being clingy. XX had been vomiting from Friday (4 to 5 vomits), Saturday one loose stool. XX had a history of fever for 2 days, maximum temperature 38.8 degrees on [Personal Information redacted by the USI]. It was recorded by Paediatric Doctor 2 that XX had no temperature on examination. XX had not had any sick contacts, no recent travel or previous admission to hospital.

**5.0 DESCRIPTION OF INCIDENT/CASE**

On examination XX was unsettled, with a normal CRT, bedside glucose level was checked and normal (6.7 mmol/L), as were XX's 'vital signs' - respiratory rate 40, heart rate 142/min, temperature 36.7 and haemoglobin saturation was 99% in room air. PEWS 0. Respiratory system examination documented bilateral air entry equal, throat red with no exudate, ears not examined. Heart sounds were normal, the abdomen was soft with no guarding. 'Good femoral pulses' were recorded. Although Paediatric Doctor 2 did not document anything in relation to fontanelle examination in the notes, the doctor stated in interview with the review team that the baby's anterior fontanelle was examined and not considered to be tense or raised.

Paediatric Doctor 2's preliminary differential diagnoses were either viral upper respiratory tract infection or viral gastroenteritis. Paediatric Doctor 2's management plan was to increase oral fluids and undertake bloods. Although nothing was noted in the chart relating to urine, Paediatric Doctor 2 stated to the review team that the nursing staff were asked to obtain a urine sample. Paediatric Doctor 2 wrote in the notes that if bloods are normal XX can be reviewed and discharged home and stated that reassurance was given to XX's parents. At 17.30 hours ED nurse 2 recorded the paediatric early warning score (PEWS) as 0. *'Awaiting bloods and urine specimen. Paediatricians will review after bloods'*. ED nurse 2 administered ondansetron (an anti-emetic).

Paediatric Doctor 2 checked to see if blood results were available at 19.00 hours, however they were not on the computer system.

The paediatric team were busy with tasks remaining outstanding from the morning round, other duties and referrals and another acutely unwell baby in the Special Care Baby Unit (SCBU) at around 19.30 hours. The paediatric ward was at full capacity.

At 20.15 hours XX's PEWS were noted to be 0. The baby was with her mother in a seated area ('the seats') in the Emergency Department and not in a 'high dependency' area. ED nurse 2 bleeped the Paediatric Doctor 1 to advise that bloods were available and of the high CRP 382 (normal range less than 5mg/L) at around 20.15 hours. Paediatric Doctor 1 informed Paediatric Doctor 2 and was advised that the ED team should arrange for XX to be admitted to the paediatric ward. Paediatric Doctor 1 phoned the Emergency Department stating same but also advising that the paediatric ward would need to 'create bed space' for the admission. Paediatric Doctor 1 then spoke to the nursing team on the Paediatric Ward (approx. 20.20 hours) and advised of the need to make a bed available for XX's admission. This discussion occurred around the time of nursing handover. The need for bed space was reiterated at 20.40 hours by Paediatric Doctor 1 to the nursing staff. Nursing staff contacted the Head of Service at 20.40 hours to discuss moving another patient to make room for XX. A patient was subsequently moved to the ENT bay on the ward and the domestic staff were tasked to prepare the room.

At around 20.45 hours the Paediatric Doctor 1 recorded XX's blood results and advised her parents in the ED that XX should be admitted to the ward due to consideration of 'infection, dehydration, anaemia'. Paediatric Doctor 2 attended ED also. XX's parents were advised that the paediatric ward were arranging a bed for XX and that they would be kept informed.

The plan was documented 'for admission/ IV access/urine sampling/IV antibiotics and

**5.0 DESCRIPTION OF INCIDENT/CASE**

consideration of lumbar puncture'. It was noted that 'observations were stable at present'.

Medical handover commenced late at 21.30 hours and finished at 22.15 hours due to the day team remaining busy with outstanding tasks and paperwork. The on-call consultant, Paediatric Doctor 4, was in SCBU tending to an acutely unwell baby. Paediatric Doctor 4 listened to the handover via telephone. At the end of medical handover it was reported by the day team that XX was awaiting admission from ED with a possible diagnosis of gastroenteritis and an elevated CRP of 382. The day team advised that the baby was not considered to be dehydrated, however was not taking enough fluids and appeared well. During interview, Paediatric Doctor 2 advised that XX's blood sample had been undertaken 'because she was a re-attender'. Following this the night team advised that XX should be brought to the ward urgently to enable culture sampling and the commencement of intravenous antibiotics.

It is not clear exactly when the bed space for XX was ready and how this was communicated between the Paediatric and Emergency Department nursing staff. The 'night team' Paediatric Doctor 3 (Paediatric Night SHO) spoke to the nursing staff after medical handover and asked that they contact ED to arrange for XX to be brought to the ward as soon as possible.

At approximately 22.50hrs XX was brought to the treatment room on the paediatric ward from ED. It is thought that XX was possibly carried by her mother with the accompaniment of ED Nurse ('Seats' nurse). The facts around this are not clear from notes, nor staff recollection.

On arrival to the Paediatric ward at 23.00 hours XX's PEWS were recorded as 0. Paediatric Doctor 3 and Paediatric Doctor 4 assessed XX and a preliminary diagnosis of sepsis and query meningitis was made.

XX was noted to be very ill on her arrival into the ward. Paediatric Doctor 3 documented a brief history and that XX was 'pale ++' 'grunty++' 'very irritable to handle' with temperature 38.7, heart rate between 160-170 and 'sick baby on admission'. Paediatric Doctor 4 documented the history including 'grunty respirations and high pitched cry today' and examination findings including 'pale +' 'cap refill time 2-3 seconds, irritable on handling, peripherally a little mottled, AF (anterior fontanelle) sl (slightly) bulging/full'. XX was cannulated and an IV bolus administered of 10 mls/kg of normal saline. IV antibiotic ceftriaxone 500mgs (80mgs per kg) was prescribed and it was administered at 23.50 hours. Bloods were taken for blood cultures, polymerase chain reaction (PCR) for meningococcal, calcium and magnesium. Urine was tested by dipstick with nothing abnormal detected. Portable chest X-ray was undertaken with nothing abnormal detected.

Paediatric Doctor 4 undertook a further review of XX at 00.30 hours. CRT 2 seconds, HR 130-150, pale, not mottled. Paediatric Doctor 4 recommended to check XX's coagulation screen and repeat lactate and pH. Paediatric Doctor 4 requested a throat swab and central nervous system (CNS) observations. Paediatric Doctor 3 prescribed maintenance fluids of 0.9%, plus 5% dextrose at 25mls/hr ('100%' maintenance rate).

**5.0 DESCRIPTION OF INCIDENT/CASE**

On Personal Information redacted by the USI (overnight Sunday/Monday morning) at 02.11 hours blood results were recorded (blood gas, FBP, CRP, lactate and it was documented that the coagulation studies and 'Bone [Calcium etc] / Mg' sent). PEWS and CNS observations were recorded hourly overnight. The PEWS score was between 0 and 2 due to raised systolic blood pressure (113/77). CNS observations recorded as 14/15 throughout the night due to irritable cry. Ibuprofen was administered at 04.10 hours. It was noted at 06.00 hours by Paediatric Nurse 1 that XX's 'fontanelle remains tense'. XX was noted to be unwell throughout the night.

XX was reviewed by Paediatric Doctor 5 (Paediatric Night Reg, ST3) at 08.20 hours. It was noted that XX was irritable throughout the night, grunting, crying and difficult to handle. PEWS was noted to be 2 due to increased blood pressure (113/77 mmHg). XX was receiving IV fluids and tolerated a 30 ml bottle feed and was sleeping. Bedside monitoring showed Haemoglobin oxygen saturations above 94% in room air.

At the Multidisciplinary Medical/Nursing handover on Personal Information redacted by the USI XX was identified as being sick and was prioritised for discussion at the start of the meeting by the night medical team. The history, examination (including her bulging fontanelle) and investigation results were discussed. The nursing team expressed concerns that the baby's PEWS score did not reflect the severity of her illness. Paediatric Nurse 2 alerted Paediatric Doctor 7 (SHO Locum Doctor) that XX was unwell and requested XX to be seen first during the ward round.

XX was reviewed first on the ward round at 10.00 hours by Paediatric Doctor 4. It was noted that XX continued to grunt, tolerated a bottle feed at 08.00 hours. XX's mother reported XX was lying with her head to the right side only. On examination CRT less than 2 seconds, irritable on handling, anterior fontanelle bulging, moaning and grunting, partly opening eyes, eyes deviated to the right. XX had increased tone to both lower limbs, pupils 6mm, both reacting to light, stiff upper limbs. Paediatric Doctor 4 instituted treatment for raised intracranial pressure, as well as broadening treatment to cover for herpes encephalitis and initiated XX's transfer to the RBHSC Paediatric Intensive Care Unit for neuro-intensive care.

The documented ward round plan for XX was to reduce IV fluids to two thirds maintenance, commence IV acyclovir and IV dexamethasone (administered at 10.00 hours), repeat bloods to include full blood picture (FBP), UE, CRP and venous blood gas (VBG). Consider a stat dose of hypertonic saline of 3% (infused at 11.00 hours). Discuss with Paediatric Intensive Care Unit (PICU) to consider mannitol. Contact anaesthetic team for urgent review of XX on the ward. Paediatric Doctor 4's working diagnosis was raised intracranial pressure (ICP)/meningitis.

At 11.00 hours Paediatric Doctor 6 (Paediatric Day SHO) and Paediatric Doctor 4 reviewed XX due to an episode of desaturation of SpO2 to 84%, HR decreased to 89, skin mottled, mouth movements and possible seizure activity. BM recorded at 4.9. CRT 3-4 seconds. A fluid bolus of 10 mls per kg was administered immediately. XX was re-assessed and CRT less than 2 seconds. HR and saturations improved. XX was in receipt of 15 litres of oxygen. The anaesthetic team attended to assist. The baby was transferred to theatre (11.10 hours) and intubated (11.20 hours). Dexamethasone was given (documented at 10.00hrs) and IV acyclovir. Following

## 5.0 DESCRIPTION OF INCIDENT/CASE

intubation XX was sedated with an infusion of morphine and midazolam. Hypertonic saline (3% NaCl) was administered intravenously at 12.05 hours. Additional intravenous access was attempted but was very difficult to obtain. Arrangements were made for a CT scan which was offered at 12.15 hours but not undertaken due to the practicalities and risk associated with transporting XX to the scanning site.

The paediatric transfer team arrived at 13.00 hours and XX was transferred to PICU at 14.40 hours. Paediatric Doctor 4 explained to XX's parents that XX was very ill with suspected meningitis and an uncertain prognosis prior to transfer.

## 6.0 FINDINGS

The review team acknowledges that XX presented to ED with vague non-specific symptoms with a wide differential diagnosis, varying from common viral illnesses, including viral gastroenteritis, to serious invasive bacterial infections (SBI) and less common surgical disorders, metabolic disorders etc. The team acknowledges that it is challenging to distinguish benign conditions from those that are serious or potentially serious especially in infants (children 12 months or younger) and harder again in patients around XX's age of [Personal Information redacted by the USI].

The review team note that although XX had a very high heart rate of 180 on her first presentation on [Personal Information redacted by the USI] her PEWS score was subsequently 'low' (1 or zero), capillary refill times were normal and therefore the common systemic signs of sepsis were not present in XX. However, the review team consider that from the history, there were warning features which suggested sepsis, including the report of fevers and poor feeding with irritability. In addition, on XX's second presentation on [Personal Information redacted by the USI], there were also warning features which suggested sepsis from examination findings. The review team consider that the warning signs of sepsis were missed on both presentations to the Emergency Department and by the Paediatric Team on first review in the Emergency Department on [Personal Information redacted by the USI].

The review of this case has identified a number of factors which resulted in the delayed diagnosis and subsequently the delayed provision of emergency treatment for sepsis/meningitis in the case of XX.

### Recognition of the sick child

The review team consider that the decision to discharge XX on [Personal Information redacted by the USI], after less than 4 hours in the ED was premature, given that XX had a temperature of 38 degrees and no investigations had been undertaken to explore the potential for serious bacterial illness. Investigations such as urinalysis at minimum, with consideration for blood tests such as inflammatory markers – C Reactive Protein 'CRP' and white cell count [WCC] were indicated, given the presentation of a young infant with a history of poor feeding, vomiting, tachycardia and a documented fever of 38 degrees. At any age, a tachycardia of 180 should be recognised as a sign of potentially significant pathophysiology and XX had a raised heart rate documented two further times during her first assessment.

The review team consider that it would have been appropriate to consider discussing XX's presentation with an experienced paediatric doctor and to have kept XX under close hospital assessment to facilitate observation of vital signs plus several feeds, as

## 6.0 FINDINGS

well as obtaining results and interpreting basic investigations outlined above. Such observation would often require at least 4 hours of assessment in hospital, either in an appropriately staffed and supported Emergency Department, or within an appropriately staffed and supported Short Stay Assessment Unit or the equivalent.

The review team note that XX was prescribed cyclizine however this was not administered. NICE guidelines do not recommend the use of anti-emetic therapy in children with suspected gastroenteritis and it would not be usual practice in ED to use it in children <1 year.

On XX's second presentation on [Personal Information redacted by the USI], the review team note that the examining doctor in ED Doctor 2 did not ask for urine sampling from the baby, which would be routine practice, and recommended in NICE guidance, in the assessment of a febrile infant such as XX.

The review team note that XX's blood pressure was not recorded in ED. The PEWS scores were '1' at presentation on [Personal Information redacted by the USI] and '0' at presentation on [Personal Information redacted by the USI] (temperature does not contribute to scoring; any abnormal systolic blood pressures if recorded would have done.) Best practice involves measurement and recording of blood pressure at least once along with 'vital signs'. The review team acknowledge that it can be difficult to obtain blood pressure readings on small children, and the interpretation of high blood pressure recordings in irritable children of all ages presents difficulties. Documentation of capillary refill times is useful and a short capillary refill time (less than 2 seconds) can be an index of appropriate systemic perfusion (and by inference, blood pressure) in many instances. The review team notes that capillary refill times were assessed for XX and results were normal when she was in the Emergency Department.

XX was prescribed an anti-emetic (ondansetron 2mg) which was administered. This symptomatic treatment is not in line with NICE guidance for gastroenteritis in this age-range and not licensed. The review team do not consider that the administration of the medicine had any harmful effect on XX.

The review team considers that admission should have been recommended at an earlier stage. It is noted that XX was appropriately categorized as 'Category 3' following triage at 11.57 hours on [Personal Information redacted by the USI], indicating that medical assessment should take place within 1 hour. However, XX was not seen until 14.00 hours.

The review team consider that on XX's second presentation on [Personal Information redacted by the USI], (75 hours later) the Emergency Department failed to recognise the salience of the history and non-specific but serious examination findings. The failure to recognise the serious illness meant that the opportunity to either institute timely treatment or flag the case as urgent and seek immediate help from the on call Paediatric Team was missed.

The review team note that on XX's second attendance no differential diagnosis was documented within the main body of the notes by Emergency Doctor 2, although 'gastroenteritis' was entered as a diagnosis on the flip side of notes. There was no initial documentation to suggest urine should be tested and no evidence of consideration of blood tests, radiology or immediate admission to paediatrics.

## 6.0 FINDINGS

The review team consider that blood and urine samples should have been taken and intravenous antibiotics commenced and/or the immediate request for assistance from paediatrics after the 14.00 hours assessment by Emergency Doctor 2. The review team acknowledges this would have been dependent on the ED team recognising possible/probable meningitis/serious bacterial illness. Triggers to consider possible Sepsis (altered mental status, pale, reduced wet nappies) were present, with a Red Flag (high pitched cry) therefore XX required senior review and investigations within one hour, plus prompt IV antibiotics (Sepsis 6 2006, updated 2019). Consideration should have been given to commence antibiotic administration in ED and request for a fast track admission to the paediatric ward.

The review team note that Paediatric Doctor 2 on day duty on Sunday [redacted] sent some blood samples as a 'screening' exercise, as well as to check XX's electrolytes (to assess for evidence for dehydration) and it was when the CRP was returned that admission was recommended. Whilst blood tests are often used in conjunction with clinical assessment, the review team note that there appears to have been a reliance on biochemical markers of inflammation to justify admission rather than the clinical features that were present.

The review team consider that on receipt of the deranged blood results the Paediatric Day Team should have considered immediate review of the patient in the ED and immediate escalation of investigations and treatment to include taking blood cultures and starting broad spectrum antibiotics for presumed sepsis. It appears to the Review Team that notwithstanding the abnormal results the Paediatric Day Registrar remained of the opinion that XX was a 'well' baby and not 'ill' needing emergency treatment.

Good practice at handover requires good situational awareness and involves the early handover of the 'sickest patients' and priority issues to the receiving team. This did not happen in this case as the Paediatric Day team had failed to understand that XX was very ill when she was seen in ED.

The review team consider that staff failed to consider differential diagnoses while assessing XX. This resulted in blinkered thinking and the inappropriately narrow focus on a diagnosis of viral illness/gastroenteritis.

### Assessment/Task Factors

The review team acknowledge that when XX was being discharged on the first presentation, [redacted], general advice was given to 're-attend if further concerns'. It is not clear from chart review what 'further concerns' might have meant, leading to questions as to whether the absolute significance of fever or reduced feeding and vomiting in young infants was understood to be important to the discharging team. As such XX was discharged without time-limited, detailed 'safety-net' advice being provided to XX's parents.

The review team note that Paracetamol was prescribed as 90mg, however '2.5mls' was written on the prescription implying 60mg was given if the usual strength of 120/5ml paediatric solution was used. The review team consider that the medicine's Kardex should have noted the dose administered in mg.

## 6.0 FINDINGS

In this specific case neither the ED doctors nor the Paediatric Doctor 2 actively considered instituting antibiotic therapy in the ED pending transfer, whilst 'fast-track' admission was not feasible. These factors represent missed opportunities which contributed to the delayed empiric treatment for sepsis.

The review team notes that XX had raised blood pressure on admission but for most of the time in ED was afebrile and had low or 'normal' PEWS scoring. Raised blood pressure, coupled with bradycardia, is a sign of raised intracranial pressure (ICP), as is a prominent anterior fontanelle in infants, and XX had a bulging fontanelle on admission to the paediatric ward. The latter finding can be present in meningitis. Raised blood pressure is a common finding in unsettled, irritable and uncomfortable infants/patients and whilst in retrospect in this instance it may have been due to raised ICP this could not have been ascertained initially.

### Organisational Factors/Resources

The review team note that XX was assessed on both presentations in ED by Locum Staff with limited paediatric experience. In addition, the review team is aware of the shortage of paediatric trained nurses working in ED. The review team consider that this may have compromised medical decision making and multidisciplinary input on both presentations to ED.

The review team note the delay in review of the lab results i.e. **not seen by ED staff until approximately 3 hours from sampling time**. The review team consider that the turnaround time was beyond a reasonable timeframe and resulted in delay in the appropriate escalation of treatment.

**The review team note that XX was in the care of the Emergency Department for almost 11 hours.** Within this timeframe there is a lack of evidence of appropriate medical review of XX which may have impacted on the Emergency Doctors' awareness of XX's changing condition.

The review team acknowledge the pressures experienced by both the Emergency Department and the Paediatric Services, especially during the winter period. The review team note that due to workload pressures within the paediatric team, over 2 hours had passed before Paediatric Doctor 2 was available to review XX in the ED.

The review team consider that the demands on the Paediatric Day Team impacted on the timeliness of the evening handover which contributed further to the delay in appropriate recognition and treatment of XX. The review team note that the pressures faced by the Paediatric Day Team were not escalated to the Paediatric On Call Consultant.

The review team acknowledge the multiple pressures faced by ED and paediatric service, including issues of overcrowding, increased workload and busy departments. The review team consider that these systemic problems may have resulted in it becoming 'normal' for patients to wait many hours in ED for a definitive management plan. The review team recognise that these issues are beyond the control of staff within the Health and Social Care Trust.

The review team note the delay in reporting the blood results i.e. over 2 hours. There

Commented [KP1]: The child was referred to paediatrics – appears to be blaming ED.

## 6.0 FINDINGS

is some consideration amongst members of the Royal College of Biochemical Pathologists to suggest that best practice aims to have 'Turnaround Times' ('TATs') of less than 1 hour for 'Emergency Samples' and that turnarounds of over 2hrs are not acceptable. The review team does consider that the turnaround time in this instance fell below standards. The team acknowledges that if in fact the highly deranged CRP result had been available at 19.00hrs when the Day Paediatric Registrar, PD2, reports seeking the same, escalation of treatment may have taken place earlier than it did.

### Individual staff factors

The review team consider that doctors working in the Emergency Department as well as a doctor in the Paediatric Department failed to recognise a number of signs to potential sepsis/serious bacterial illness when assessing XX on [redacted] and [redacted]. The review team consider the decision making by ED staff may have been as a result of limited paediatric knowledge and experience.

### Communication

The review team note that on discharge from ED, XX's parents were not provided with a timeframe within which they should re-attend if further concerns. This may have resulted in delay in re-presenting to ED and a correct diagnosis and treatment plan instituted.

The review team note that the request for on-call paediatric team review within the Emergency Department did not alert the paediatric team to the urgency of XX's condition.

The review team note the considerable delay in transfer from ED to the paediatric ward, despite direction from Paediatric Doctor 2 that XX should be admitted as soon as possible. The review team have been unable to ascertain all the reasons for this. The review team consider that the delay in transfer from ED to the paediatric ward was impacted by capacity limitations on the paediatric ward and inter-team and intra-team communication difficulties, delayed handover and the multiple demands on the paediatric service.

The review team note that the handover meeting did not prioritise the early handover of the 'sickest patients' to the receiving team. The review team consider that this was due to the Paediatric Day team not recognising that XX was very ill.

The review team acknowledge that the paediatric ward was at full capacity when XX was identified as requiring admission. Clarification was appropriately sought from the Head of Service at 20.40 hours as to which other patient could be moved in order to free space up for XX's admission.

### Education and training

The review team consider that the lack of paediatric trained/experienced nursing and medical staff in the ED led to delayed recognition of XX's presenting symptoms and deteriorating condition.

### Patient factors

## 6.0 FINDINGS

The review team acknowledge that XX had reassuring PEWS scores recorded on both presentations, despite the first recorded heart rate of 180. XX's heart rate values were in the normal range for most of the time that she was in the ED on [Personal Information redacted by the USI]. Capillary refill times were also normal in the ED. The recorded PEWS score 'numbers', therefore, may have misled the attending Clinicians and betrayed the fact that she had a serious bacterial illness.

### Good Practice

The review team note that it was good practice for Paediatric Doctor 1 to speak to XX's family once the deranged blood results had been returned and document the decision for admission, plus outline some diagnostic considerations and treatment planned.

The review team note that on arrival to the Paediatric Ward it was immediately evident to the ward nursing and medical staff that XX was very ill and received immediate attention and appropriate emergency treatment for presumed meningitis/sepsis from that point onwards. Within 50 to 60 minutes of arrival to the paediatric ward she received antibiotics. This was acceptable and within the recommended timeframe as detailed in 'Sepsis Six' guidance. Further to this XX was appropriately identified as a priority patient immediately after the morning handover by Paediatric Doctor 4 and the decision was made to transfer her to the Paediatric Intensive Care Unit (PICU).

The review team acknowledge the timely stabilisation for transfer, and the provision of emergency treatments on [Personal Information redacted by the USI].

The review team consider that the medical and nursing management and care of XX following arrival to the paediatric ward to discharge to PICU was of a good standard.

Current advice for the treatment of bacterial meningitis does not support immediate or 'elective' fluid restriction (which historically has been to 50-66% of maintenance fluids) and the review team supports the Consultant decision to prescribe full maintenance fluids initially given the known history of poor intake and reduced output. When XX deteriorated by the morning of [Personal Information redacted by the USI] with focal (or potentially 'false localising signs, and possibly features of 'coning') it was the correct decision to restrict fluids and give emergency treatment for raised ICP and to ventilate, sedate and transfer for Neuro-intensive care. The addition of antiviral 'cover' with acyclovir was also good practice in view of focal signs at that stage.

## 7.0 CONCLUSIONS

XX was a young infant, [Personal Information redacted by the USI] age, who presented on two occasions with non-specific but important features to suggest possible bacterial illness which went unrecognised by doctors in the Emergency and Paediatric Department.

Salient features pointing to the high likelihood of serious bacterial illness (and possibly meningitis) in this infant included poor feeding, vomiting, fevers and 'clinginess' (abnormal behaviour) plus crying and irritability. XX had a significantly raised heart rate of 180 on her initial presentation, although this reduced towards normal, and her

heart rate was consistently in the normal range on her second presentation. The documentation of 'normal' Paediatric Early Warning Scores in this case may have served to distract the assessing doctors initially, who appear to have been falsely reassured in this regard. XX appears to have had isolated meningitis, without 'septicaemia', and hence maintained vital signs, leading to PEWS scores in the normal range (aside from blood pressure) despite being very unwell.

The Emergency Department which XX attended is of small size and has few Paediatric Trained Nurses to support decision making, and none were available either day of presentation. XX presented to a busy ED and was moved to an area with limited opportunity for ongoing surveillance during a long wait for paediatric assessment.

Both the Emergency Department and the Paediatric Department have a reliance on Locum staff to maintain cover, and it is recognised that Locum staff do not necessarily receive the same training opportunities and feedback as permanent staff and trainees. In addition it is difficult for Supervising Consultants to be sure of Locum Doctors' competencies in different areas of practice. It is suggested that investment in a robust staffing model, which is not reliant on ad hoc locums, is the ideal. The review team suggest that long term or regular locums should receive the same induction, supervision and support, to obtain competencies, as other staff.

The review team recognise the value and importance of trained paediatric nurses (including Advanced Paediatric Nurse Practitioners) in providing expertise and assistance in a multidisciplinary model of Paediatric Urgent Care. The review team note that such specialist nurses were not available in the ED in question and recognise that this is due to national shortages.

The review team consider that XX should have been observed for up to 4 hours observation to confirm adequate feeding/behaviours on her first presentation to ED on [Personal Information redacted by the USI]. This would have enabled a full assessment, investigation and consideration of admission for treatment. It is possible that XX had pneumococcal infection at that stage and if so that earlier identification and treatment may have reduced illness severity.

On [Personal Information redacted by the USI], a series of factors contributed to a delay of approximately 12 hours from re-attendance, to administration of antibiotic treatment. Significant delay occurred between the time when decision to 'admit' was recommended, to actual paediatric admission. The patient flow between the Emergency Department and the Paediatric Ward was unsatisfactory. The review team acknowledge that it is impossible to maintain bed availability 100% of the time, especially during the peak seasons (Autumn and Winter). The review team consider that whilst some of the delay was explained by the requirement to free up bed space in the ward which was 'at capacity', communication issues were significant.

The review has established that there was a delay in administration of antibiotics to XX. Antibiotics can and should be given in Emergency Departments when serious bacterial illness is likely and/or there are predicted or actual delays in admission to hospital wards for treatment.

Viral illnesses, including viral gastroenteritis, constitute the most common reasons for non-specific illnesses in infants and children and are an important differential

diagnosis. The review team consider that serious bacterial illness, more commonly urinary tract infection but also bacteraemia, pneumonia, meningitis etc, remain important alternative differential diagnoses in infants and young children and should be considered in most presentations to medical care.

Bacterial urine tract infections (UTI) are one of the most common causes of SBI in immunized infants. Although a UTI was not diagnosed in this case, ED staff appeared unaware of the importance of sending urine samples for analysis to 'screen' for UTIs in young infants with non-specific illness, especially when fevers are reported

It is impossible to predict which infants/children with non-specific features of illness have serious bacterial illness unless careful medical assessment takes place, often with augmented periods of observation, utilisation of tailored investigations in some instances and/or input from experienced paediatric staff.

In this case, whilst there were shortcomings in the interpretation of findings by the assessing Paediatric Registrar first to see XX, the same Registrar was reported to be very busy with the pressures of Winter workload coupled with sequential emergencies in the hospital Neonatal Unit and all of these factors contributed to delays in medical assessment.

The on-call Paediatric Consultant was unaware that the Paediatric Registrar considered workload to be heavy on the afternoon of [Personal Information redacted by the USI] but with awareness may have been able to offer assistance and attend to help. An earlier consultant presence may have enabled earlier identification of illness etc.

#### Independent Expert Advice:

### 8.0 LESSONS LEARNED

Serious bacterial illness (SBI) can be challenging to diagnose in infants, requiring a good index of suspicion plus some fundamental paediatric knowledge, often coupled with an appropriate period of observation and sometimes basic investigations including urine and blood tests. The review team identified that there were missed opportunities in the identification of sepsis/pneumococcal meningitis in this case.

Doctors assessing young infants require training to be able to identify 'sick' or 'potentially sick' infants. Emergency Departments with permanent medical staff that have undertaken training in the assessment of medical illness in children, as well as paediatric-trained nurses, are better placed to assess infants and young children compared to those without.

The review team note that many children may present with non-specific features of a serious bacterial illness, and within a busy Emergency Department it can be difficult to identify a very ill child with meningitis from the many other children presenting with similar features.

Kernig's sign is not usually elicited in young infants, and clinicians cannot rely on

identification of classic 'meningeal' signs such as photophobia and neck stiffness in children below 18 months – 2 years: absence of 'meningitis signs' does not imply absence of meningitis.

A history of significantly reduced feeding or vomiting and fevers in any infant below 6 months, should always lead to a detailed assessment to exclude serious bacterial illness.

All patients (of any age) with a heart rate between 160 and 180 or more must have sufficiently detailed medical assessments completed to explain the primary cause for the tachycardia and to address and manage this.

When infants with feeding difficulties and/or reports of fever are discharged from hospital care it is good practice to provide specific recommendations regarding 'targets' for feeding, warn of the significance of fevers and set a time-frame and illness trajectory for anticipated improvement.

#### 9.0 RECOMMENDATIONS AND ACTION PLANNING

1. The review team recommend that the HSCB/Department of Health/Trust seek to enhance permanent medical staffing numbers and acquire paediatric trained nursing staff to work in all Trust Emergency Departments.
2. Uptake of two National e-Learning resources, namely 'Sepsis in Children' from the Sepsis Trust (UK) (2020) and 'Spotting the Sick Child' (RCPCH,) (2020), should in future be required of newly appointed medical and nursing staff involved in clinical decision-making with regards children including:
  - a. Paediatric, Primary Care and Emergency Trainee Doctors
  - b. Paediatric Nursing Staff
  - c. Triage Nurses in Emergency and Primary Care
3. Medical staff involved in the assessment and management of XX should undertake reflective learning and complete the online course 'Spotting the Sick Child', with successful certification, also the Sepsis Trust e-learning modules 'Introduction to Sepsis' and 'Sepsis in Children'.
4. The review team recommend that long term or regular locums should receive the same induction, supervision and support to maintain competencies as other staff.
5. Where a decision is made to discharge a child with ongoing symptoms/signs, parents/carers should be advised of timeframes in which they should return if symptoms persist, as well as specific triggers which require earlier review. It is good practice to provide written advice in addition to documented verbal advice.
6. The Trust should have a principle of encouraging early prescription and administration of intravenous antibiotics to infants/children that are considered to have actual or possible sepsis/serious bacterial illness prior to transfer to the Paediatric Ward, unless immediate transfer is in process, in keeping with the 'Sepsis 6' care bundle.

Commented [KP2]: ED not sure about this recommendation for ED not sure how he could implement.

Commented [KP3]: No written advice from ED is this coming from CYP?

Commented [KP4]: Paediatric doctors don't feel they are trained to give iv antibiotics in ED. Child under care of paed and should have administered by paed.

**9.0 RECOMMENDATIONS AND ACTION PLANNING**

7. All staff should be actively encouraged to alert their Line Managers (including On Call Consultants) in a timely fashion, where concerns exist in relation to service capacity. Ward Mission Statements that include 'Trigger Points for Escalation', displayed in relevant clinical areas, may be a means of communicating this, as well as specific reference to the principle at induction.

Commented [KP5]: Concerns about the wording of these recommendations.

**10.0 DISTRIBUTION LIST**

Director of CYPS and Director of Acute Services, Southern Health & Social Care Trust (SHSCT), the staff associated with the care of XX, the Health & Social Care Board (HSCB), Public Health Agency (PHA), and XX's parents.

| <b>8. SUMMARY OF EVENT:</b>  |  |
| <p>[Personal Information redacted by the USI] was brought by ambulance from Downpatrick to Daisy Hill Hospital (DHH) Emergency Department (ED). It was reported [Personal Information redacted by the USI] was found lying on the street, alcohol taken, stating he fell and hit the back of his head. [Personal Information redacted by the USI] had a known psychiatric history of self-harm. [Personal Information redacted by the USI] was noted to be distressed and hallucinating, stating his deceased sister was in the back of the ambulance with him. The nearest hospital would have been Ulster Hospital Dundonald (UHD) which has an alongside psychiatric unit. The Northern Ireland Ambulance Service (NIAS) duty manager was advised by DHH ED Sister that [Personal Information redacted by the USI] should have been taken to the nearest ED which was UHD. The ED Sister also advised NIAS that [Personal Information redacted by the USI] may have been brought into the department with a concealed weapon.</p> <p>At triage [Personal Information redacted by the USI] denied any suicidal ideation. Following discussion with NIAS it was noted [Personal Information redacted by the USI] had absconded. The absconding policy was implemented, a search of the building and grounds was commenced and the PSNI were contacted. The PSNI call handler declined to take details as security had not completed their search of the grounds. It was highlighted to the operator by the nurse that [Personal Information redacted by the USI] was a high risk patient, however the PSNI call handler still declined to take details.</p> <p>Less than an hour later [Personal Information redacted by the USI] was brought back to DHH ED by the PSNI. [Personal Information redacted by the USI] had a self-inflicted stab wound to his abdomen with the knife still insitu and was in severe pain. [Personal Information redacted by the USI]'s condition deteriorated, his GCS dropped and he became unresponsive and was subsequently intubated and transferred for a CT scan and management in theatre.</p> |  |

## 12. WHAT HAPPENED?

On [Personal Information redacted by the USI] at 01:59 [Personal Information redacted by the USI] was brought by ambulance to DHH ED. [Personal Information redacted by the USI] was triaged by staff nurse 1 on arrival and it was documented [Personal Information redacted by the USI] had alcohol on board and was found lying on the street. [Personal Information redacted by the USI] stated he had fallen and hit the back of his head. It was documented [Personal Information redacted by the USI] stated his deceased sister was sitting in the ambulance with him. [Personal Information redacted by the USI] had a history of self-harm and a previous head injury following a road traffic collision. A handwritten note was added documenting [Personal Information redacted by the USI] denied suicidal ideation and had no delirium. [Personal Information redacted by the USI]'s observations were checked and were noted as pulse (P) 86 bpm; blood pressure (BP) 183/63; respiratory rate (RR) 18; Temperature (T) 36°C; SpO<sub>2</sub> 96% and Glasgow comma scale (GCS) 15/15. [Personal Information redacted by the USI] was triaged as a priority 3, i.e. to be seen within 60 minutes. Nurse 1 commenced the Regional Emergency Department Risk Assessment Form.

Staff nurse 1 discussed [Personal Information redacted by the USI] with doctor 1. Staff nurse 1 expressed her concerns to Doctor 1. [Personal Information redacted by the USI] wanted to leave ED. [Personal Information redacted by the USI] was taken into Resus 1, majors area.

At 02:20 it was documented that staff nurse 2 was discussing [Personal Information redacted by the USI] with NIAS paramedics. Staff nurse 1 noted [Personal Information redacted by the USI] was no longer in the cubicle. All areas in the ED were searched. Security was contacted to search the hospital grounds and the absconding checklist was completed. It was documented that the nurse in charge contacted the PSNI.

At 02:30 security were contacted to ascertain the whereabouts of [Personal Information redacted by the USI]. The PSNI were contacted to report [Personal Information redacted by the USI] was missing. It was documented the PSNI call handler refused to take complete details of the patient as the staff nurse had stated security had not completed their search of the grounds. Staff Nurse 1 emphasised that [Personal Information redacted by the USI] was a high risk of absconding and needed the call handler to take complete details. It was documented the call handler refused.

At 03:18 [Personal Information redacted by the USI] was brought back to DHH ED by the PSNI with a stab wound to his abdomen. [Personal Information redacted by the USI] was triaged on arrival and it was documented he was in severe pain. It was reported [Personal Information redacted by the USI] had stabbed himself in the abdomen with a knife. A hand written note was added to ED documentation stating [Personal Information redacted by the USI] was high risk of self-harm. Doctor 2 was in attendance and surgeons were contacted to review. [Personal Information redacted by the USI]'s airway was patent and he was talking. Observations were noted: RR was 18, (P) 108bpm, Blood Pressure (BP) 160/69 and SpO<sub>2</sub> 99%. [Personal Information redacted by the USI] was commenced on 15 litres (l) of oxygen. Cardiac monitoring was commenced and an echocardiogram carried out. Bloods were completed and intravenous access was obtained. [Personal Information redacted by the USI]'s GCS score was 14/15.

At 03:50 it was documented [Personal Information redacted by the USI] had become unresponsive. [Personal Information redacted by the USI] was noted to be groaning with rigors. A guedel airway was inserted. [Personal Information redacted by the USI] NEWS score was 3 due to hypertension and his GCS dropped to 7/15. Doctor 3 (Dr Craig) was contacted to attend.

At 04:00 [Personal Information redacted by the USI] was commenced on intravenous antibiotics (IVA) and a second dose of tranexamic acid. The guedel airway was removed and it was noted [Personal Information redacted by the USI] was coming round. [Personal Information redacted by the USI]'s GCS score was noted to be 12/15 and NEWS was 3.

At 04:15 the consultant anaesthetist arrived. [Personal Information redacted by the USI] was transferred to a trauma mattress for a CT scan. Further antibiotics were administered. Nursing notes document Doctor 3 was present. At 04:30 [Personal Information redacted by the USI] was intubated.

Staff Nurse 2 contacted NIAS and spoke with the duty manager. Staff Nurse 2 highlighted that [Personal Information redacted by the USI] was brought to the ED from Downpatrick and highlighted to the duty manager with [Personal Information redacted by the USI]'s presenting history, he should have been brought to the nearest ED which was the UHD which has the provision of a mental health unit on site. The duty manager informed Staff Nurse 2 that the crew were not familiar with the area and they had spoken to the controller who advised to attend DHH ED. Staff nurse 2

advised the duty manager that [Personal Information redacted] potentially had a concealed weapon when transported via ambulance to DHH ED.

At 04:48 [Personal Information redacted] was reviewed by Doctor 3. Doctor 3 documented [Personal Information redacted]'s history of an angulated stab wound to the umbilicus / left flank area. It was noted [Personal Information redacted] had taken alcohol and that his GCS had dropped after being agitated. Subsequently [Personal Information redacted] was transferred to the CT scanner and then to theatre for ongoing management and care. The surgeon and anaesthetist were present during transfer.

The CT scan concluded 'no acute intra-abdominal or intracranial pathology. Small 13mm complex cyst in the inter-polar region of the right kidney'. [Personal Information redacted] was taken to theatre for removal of knife and wound closure.

On the same day [Personal Information redacted] was reviewed by the Psychiatry team and it was documented [Personal Information redacted] reported no current thoughts of life not worth living and that he was regretful of this self-harm attempt. An urgent referral was made to Mental Health and Community Addiction team. Following assessment by Psychiatry [Personal Information redacted] was deemed low risk of harm to himself or others. [Personal Information redacted] did not wish to stay in hospital, the risks were explained to him and he was advised to stay for observation. [Personal Information redacted] had full capacity to understand the risks of leaving hospital and signed a discharge contrary to medical advice (CTMA) form prior to self-discharge.

### 13. WHY DID IT HAPPEN?

#### Patient Factors

[Personal Information redacted] was a [Personal Information redacted] old male at the time of the incident and was known to mental health services and known to the PSNI. [Personal Information redacted] had a past medical history of self-harm, alcohol dependency and a history of a brain injury. [Personal Information redacted] was found lying in the Street in Downpatrick intoxicated and complaining of abdominal pain and a head injury. The PSNI were alerted by a member of the public and attended. The PSNI subsequently contacted NIAS due to [Personal Information redacted]'s presentation.

#### NIAS

The review team acknowledge NIAS received a call to attend an intoxicated male patient complaining of abdominal pain at a location in the town of Downpatrick. On arrival the PSNI officer informed NIAS crew [Personal Information redacted] was known to them and that the PSNI would attend [Personal Information redacted] frequently with similar behaviour. NIAS reported [Personal Information redacted] appeared agitated and was having hallucinations of his deceased sister at the time. NIAS have recounted the crew dispatched to attend [Personal Information redacted] were unfamiliar with the area and consequently asked the PSNI officers the location of the nearest ED department. [Personal Information redacted] was subsequently taken to DHH ED under the direction of the PSNI. The PSNI have since advised they do not work under HealthTrust boundaries and would transfer to the nearest ED by road. The review team acknowledged DHH ED is not the nearest ED from Downpatrick (30.5miles / 52 minutes) and determined [Personal Information redacted] should have been brought to the Ulster Hospital (21.8miles/ 37 minutes). NIAS have since reviewed the case and confirmed paramedics should have contacted NIAS Control Office if they were unfamiliar with the area for advice on where to appropriately transfer [Personal Information redacted], this would be normal procedure. NIAS have confirmed [Personal Information redacted] was taken to DHHED in error.

#### PSNI

The review team suggest that [Personal Information redacted] potentially had a concealed weapon and therefore a high risk of causing harm not only to himself but to NIAS and ED staff. The review team are conscious [Personal Information redacted] was known to the PSNI, they were familiar with [Personal Information redacted]'s history and potential for carrying a concealed weapon and unpredictable behaviour. The review team recognise that [Personal Information redacted] was found in a public

place and was suffering from a mental disorder, the PSNI were aware of [Personal Information]’s history. The PSNI could have considered detaining [Personal Information] under the Mental Health Order, article 130 and provided an escort to the nearest ED for his safety and the safety of others.

The question was asked of the PSNI what rational would the PSNI have to perform a search for a suspected weapon. The Chair was advised this is a grey area, a decision to search is made on an individual basis, taking into consideration the patients forensic history and how well known to the PSNI. The review team determined the PSNI could have considered performing a search given [Personal Information]’s known history of self-harm and unpredictable behaviour due to his mental health disorder.

### Emergency Department. 1<sup>st</sup> Attendance

The review team have reviewed [Personal Information]’s ED notes and confirmed [Personal Information] arrived at DHH ED by ambulance at 01:59. The review team determined [Personal Information] was triaged immediately at the time of arrival by nurse 1 in observation room 1. Nurse 1 completed observations and noted [Personal Information] was behaving strangely stating his deceased sister was in the back of the ambulance with him. The review team can confirm nurse 1 appropriately commenced the Regional Emergency Department Risk Assessment Form as per Trust protocol. Nurse 1 required further information and whilst obtaining this information from NIAS the review team determined [Personal Information] absconded. The review team acknowledge the Regional AWOL protocol was immediately initiated and security were appropriately contacted to search the hospital grounds for [Personal Information] as per Trust procedure.

The review team can confirm [Personal Information] was not located and therefore nurse 1 appropriately contacted the PSNI to report [Personal Information] had absconded and was missing. Nurse 1 aptly highlighted to the PSNI call handler that [Personal Information] was a high risk patient. The review team are conscious the PSNI call handler declined to take full details as CAH security personnel had not completed their search of the grounds. As part of the review the Chair of the review panel discussed the case with the PSNI and it was agreed if nurse 1 highlighted [Personal Information] was a high risk patient i.e. risk to himself or others the call handler should have actioned the call immediately. The review team note the Regional AWOL protocol should be reviewed to re-consider suitable terminology to be used in high risk cases to ensure immediate action is taken by the relevant Departments.

### Emergency Department 2<sup>nd</sup> Attendance

The review team acknowledge [Personal Information] returned to DHH ED by police with a self-inflicted stab wound to the abdomen. The review team reviewed ED notes from the second attendance and determined [Personal Information]’s treatment and care was appropriate.

### Policies and Procedures.

The review team determined triage nurse 1 appropriately commenced the Regional Emergency Department Assessment Form at triage as per Trust procedure.

The review team acknowledge the SHSCT do not have a current policy/procedure for searching patients in the acute hospital setting. The review team determined such a policy would be beneficial to provide staff with guidance where a search of any patient is to be considered to ensure patients do not have in their possession items which may be harmful or inappropriate to themselves or others.

ED staff appropriately initiated the regional AWOL protocol immediately on recognition of [Personal Information]’s absence, followed by a 999 call to PSNI for a high risk missing patient as per Trust procedure.

**SECTION 3 - LEARNING SUMMARY****14. WHAT HAS BEEN LEARNED:**

Following review of notes the review team have determined [Personal Information redacted] was inappropriately transferred to DHH ED. Best practice would be a transfer to the nearest ED defined by the Trust boundary and conclude [Personal Information redacted] should have been transferred to the UHD. The review team are unable to determine if the outcome would have been any different with regards to absconding and self-harm had [Personal Information redacted] been brought to UHD.

The review team recognise the PSNI were familiar with [Personal Information redacted]'s history and behaviour. [Personal Information redacted] was found in a public place notable presenting with a mental health disorder. Article 130 of the mental health order could have been instigated and a police escort provided to a place of safety i.e. to the nearest ED where [Personal Information redacted] presented.

The review team acknowledge the Regional AWOL protocol was immediately initiated and security was contacted to search the hospital grounds for [Personal Information redacted] as per Trust procedure. The review team determined the PSNI call handler should have taken details from nurse 1, nurse 1 appropriately highlighted [Personal Information redacted] was a high risk patient. The review team is mindful that this is the 3<sup>rd</sup> SAI in the SHSCT in relation to a patient absconding from the ED. The review team are conscious on each occasion Trust staff have had difficulty obtaining an immediate response from the PSNI to assist with a search for a high risk patient. The review team therefore determined the Regional Interagency Guidance on Dealing with Persons who go missing from Emergency Departments requires immediate review and inclusion of appropriate terminology to facilitate ED staff to trigger an immediate response from the PSNI.

The review team conclude the SHSCT do not have a current policy/procedure for searching patients in the acute hospital setting. The review team determined such a policy would be beneficial to provide staff with guidance where a search of any patient or visitor is to be considered to ensure patients do not have in their possession items which may be harmful or inappropriate to themselves or others.

**15. WHAT HAS BEEN CHANGED or WHAT WILL CHANGE?**

The report will be shared with all ED staff, NIAS and PSNI for learning.

An alert has been added to [Personal Information redacted]'s NIECR record to highlight the risk of potential possession of a concealed weapon and absconding.

There is ongoing security work in DHED including implementation of controlled entry and exit system into the department. Security cameras have been upgraded.

Commented [CC1]: I have emailed Paul Chapman to confirm this

**16. RECOMMENDATIONS (please state by whom and timescale)**

1. HSCB/ PSNI to review the current Regional Interagency Guidance on Dealing with Persons who go missing from Emergency Departments and implement terminology to facilitate ED staff to trigger an immediate response from the PSNI for high risk patients. Actioned by HSCB/PSNI
2. The SHSCT Acute Directorate (mental health already have one) should produce a policy within RCEM guidelines that will provide staff with guidance where a search of any patient is to be considered to ensure patients do not have in their possession items which may be harmful or inappropriate to themselves or others. Actioned by: AD for Unscheduled.
3. The Trust should review ED Risk Assessment Form to include a risk assessment for potential possession of a concealed weapon. Actioned by :AD for Unscheduled Care
4. The report will be shared with NIAS / PSNI/ HSCB for learning. Actioned by (Corporate Governance)
5. The report will be shared at ED M&M for learning. Actioned by ( Acute Governance)

**17. INDICATE ANY PROPOSED TRANSFERRABLE REGIONAL LEARNING POINTS FOR CONSIDERATION BY HSCB/PHA:**

## 1.0 EXECUTIVE SUMMARY

Granville Manor is a Supported Living facility with 5 separate houses for Adults with Learning Disability. [Personal Information redacted by the USI] where Mr "X" lived, has 5 bedrooms with en-suites, a shared kitchen and utility, and two shared living rooms. Mr "X" became ill on the [Personal Information redacted by the USI] whilst residing at his home in [Personal Information redacted by the USI] Granville Manor.

The Out of Hours GP Service (GP OOH) was first consulted on [Personal Information redacted by the USI] and advice was received. Following testing on [Personal Information redacted by the USI] he was diagnosed as being positive for Covid-19. On [Personal Information redacted by the USI] his general health deteriorated, necessitating a second referral to GPOOH. He was assessed but not brought to an Emergency Department (ED). There were two contacts with GPOOH on [Personal Information redacted by the USI]. On [Personal Information redacted by the USI] @05.20hrs he was transferred to CAH (Craigavon Area Hospital) ED and subsequently discharged back to Granville. Later that same day (21:00hrs) he was returned to CAH ED via the Northern Ireland Ambulance Service (NIAS) and returned again to Granville Manor on [Personal Information redacted by the USI] at "03.40hrs" as per NIAS record or "04.00hrs" as per Granville notes (day 9 of symptoms).

On the [Personal Information redacted by the USI] @14.20hrs Granville Manor staff contacted his GP requesting medical assessment. A primary care senior paramedic telephoned back @15:25hrs and advised staff to complete observations and contact 999 if there was deterioration. The Ambulance crew were advised by an ED consultant to bring Mr "X" to hospital for assessment, where he was admitted to a ward via ED on [Personal Information redacted by the USI] @03.15hrs. His condition further deteriorated and he passed away in CAH on [Personal Information redacted by the USI].

The overall care provided to Mr "X" was of an appropriate standard and at times was exemplary given the understandable difficulties experienced by all health and care staff in responding to the emerging pandemic. The adverse outcome resulting in his untimely death was unavoidable, the singular causative factor being infection with the Covid virus bringing about respiratory failure.

The care delivered by Granville Manor staff was timely and appropriate in responding to his symptomatology and Covid diagnosis. Their frequent and detailed communication with his family was an example of good practice. Granville Manor staff managed interactions with the OOH GP, NIAS and CAH ED extremely well whilst at all

times advocating for Mr “X” to the best of their ability in a complex and rapidly evolving situation. His illness followed what is now a well-recognised pattern, however at that point it was an emerging illness which presented a difficult challenge to their staff, OOH GP, NIAS paramedics as well as CAH staff.

The ~~decision by Granville management~~ decision by Senior Support Worker on duty (following advice from Directorate On-Call) - not to have Mr “X” accompanied by care home staff on his first visit to CAH ED, as would have been normal practice, was because of concerns raised by the NIAS paramedics that staff may not be admitted because of Covid restrictions. Whilst this was understandable, it was subsequently clarified that he could be accompanied into ED and was so on his second visit, and third visit, but not into the inpatient ward. It did, however, result in that ED assessment being incomplete.

There appeared to be differing views as to whether or not Mr “X” should have been brought to CAH ED on the second occasion, GP OOH having advised Granville staff to call 999 if there was deterioration, as had been the advice when sent home from ED on the first occasion. These varying views are understandable in the context of Covid being an emerging illness whereby the pattern of deterioration was still being understood and was difficult to predict.

The initial decision regarding his Do Not Attempt Resuscitation (DNAR) status was unsatisfactory from his mother’s point of view. Although Dr A concluded that she was in agreement with the assessment, she subsequently stated that she did not agree and asked that the DNAR be rescinded. After further detailed discussions with respiratory and Intensive Care Unit (ICU) medical staff, which also included Mr “X’s” brother, she did gain a better understanding of the rationale behind this difficult decision. It is clear that their decision was based on his overall clinical presentation rather than simply based on his frailty as a result of his learning disability and that resuscitation and ICU admission would not have been in Mr “X’s” best interests.

Given the above, it is a recommendation that the care home or community key worker should be engaged to mediate in advanced care planning including DNAR decision in patients with learning disability. It is also recommended that a multidisciplinary risk assessment (as has been developed by CAH ED for patients with mental health

issues) be revised to consider all aspects including whether staff should accompany a patient from ED throughout the inpatient stay.

Granville care home staff training in infection prevention and control has already been augmented and has since been updated on a regular basis. They are now trained and capable of following SHSCT procedures for donning and doffing of PPE attire in order to accompany learning disability patients into inpatient units.

### **Involvement of Family:**

The Review Team and all staff members who knew Mr “X” wish to offer their sincere condolences to his family. The Trust acknowledges that this is a particularly distressing time for the family and would like to offer any support that it can. The Trust advised Mr “X’s” family that an SAI review was to be conducted on 17<sup>th</sup> July 2020. The chair of the review and Corporate Governance Coordinator then met with the family on 21 July 2020 and also provided updates to them during the review process.

## **2.0 THE REVIEW TEAM**

### **Chair:**

Dr John Simpson, Consultant Psychiatrist, Independent Chair, SHSCT

### **Review Team:**

- Emma Boylan, Northern Ireland Ambulance Service (NIAS) Serious Incident Lead (Clinical).
- Catherine Reid, Head of Service for GPOOH Service SHSCT
- Dr Erskine Holmes, Emergency Department (ED) Consultant, SHSCT
- Pat Burke, Acting Head of Supported Living (Learning Disability) SHSCT

## **3.0 SAI REVIEW TERMS OF REFERENCE**

The Level 2 SAI review will consider the following areas:

- To review the actions taken by care staff within Granville Manor in respect of the care provided to Mr “X” from the point at which he was suspected of having Covid.
- To examine the role undertaken by staff at Granville Manor during each

### 3.0 SAI REVIEW TERMS OF REFERENCE

interaction with the Ambulance (NIAS) and ED, to review information shared with emergency services and to review whether advice provided by Ambulance service and ED was adhered to within Granville Manor.

- To determine if a comprehensive medical assessment was conducted by each medical professional prior to his admission onto a ward in CAH. These contact points occurred between [REDACTED] Personal information redacted by the USI @ 03.15hrs.
- To establish that the treatment and advice provided was consistent with Mr “X’s” medical presentation.
- To ascertain if factors relating to Mr “X’s” diagnosis of a learning disability bore any influence on decisions taken in respect of assessment, treatment or advice conveyed especially in the context of “Equal Lives” and the development or application of the Hospital Passport. If so, to investigate if this factor contributed to an inequitable provision of assessment, treatment or advice.
- To identify learning which may inform the delivery of health services to people with a learning disability, particularly during the Covid pandemic.
- Engage with family member(s)\* (where appropriate) ensuring sensitivity to his/her/their\* needs and address, where possible, questions presented to the review team and/or SHSCT by the patient/relevant family member(s)\*. Dr Simpson met with the mother and brother of Mr “X” on [REDACTED] Irrelevant information redacted by the USI after which the minutes and the Terms of Reference were sent to the family. These were approved by the family on 5 August 2020.

### 4.0 REVIEW METHODOLOGY

- Review of patient/service user case notes from Granville Manor and CAH.
- Review of Granville Manor emails.
- Interviews with key staff included: Granville Manor Manager, Respiratory Ward

Physician, ED Lead Nurse, ED Lead Consultant, ICU Consultant.

- Review of policies and procedures in operation at the time of the incident which are relevant to the care / treatment afforded to Mr "X".

## 5.0 DESCRIPTION OF INCIDENT/CASE

Mr "X" was a Personal Information redacted by the USI old male with severe learning disability and autistic tendencies. He required staff to support him to manage his daily activities of living or daily routines. He required staff support to maintain his own safety both inside and outside of his home as he was unaware of common dangers. He was supported to be involved in community life and enjoyed going out for meals. He could not manage his health care needs and was supported by staff to access healthcare. He had limited verbal communication.

He had had generally good health. Personal Information redacted by the USI

Personal Information redacted by the USI

Personal Information redacted by the USI

He appeared content and happy living in Granville Manor. He shared a 5 bedroom house with 3 other gentlemen. He preferred his own company but liked 1:1 interaction from staff, going for walks etc. His behaviour could be challenging at times. He contracted Covid-19 whilst residing at his home in Personal Information redacted by the USI Granville Manor. Following testing on Personal Information redacted by the USI he was diagnosed as Covid positive. There were interactions with GPOOH service, NIAS and CAH however Mr "X" sadly passed away in CAH on Personal Information redacted by the USI.

|---|----------|----------|---|
| <div>Personal Information redacted by the USI</div> @<br>07:14hrs | ED Notes | ED Staff | First ED attendance <div>Personal Information redacted by the USI</div> at 07:14hrs, with learning disability 'hospital passport' but unaccompanied by carer. Noted to be Covid positive since <div>Personal Information redacted by the USI</div> . Referred by GP with dry cough and raised temperature. Noted to have learning disability. Mr "X" was non-compliant with both mask/visor, also with investigations and CXR (chest X ray). He was noted to be removing the SpO2 (oxygen saturation) probe and BP cuff. However, the SpO2 of 96% and RR (respiratory rate) of 26 had been recorded by NIAS paramedics. ED doctor advises return home and to reattend if deterioration. |
| <div>Personal Information redacted by the USI</div> @<br>19:24hrs | ED Notes | ED Staff | Second ED attendance <div>Personal Information redacted by the USI</div> at 19:24hrs, accompanied by carer. History of continuous cough and possible respiratory distress. Earlier attendance noted. On examination, mild increase in RR (but not using accessory muscles), cough evident, pyrexia, pulse less than 100, SpO2 97%, CXR showing mild bilateral changes in keeping with mild coronavirus. ED doctor explains to Mr "X's" brother per phone that Mr "X" can be managed in a care home.   |
| <div>Personal Information redacted by the USI</div> @20:04hrs     | ED notes | ED Staff | Third ED attendance <div>Personal Information redacted by the USI</div> at 20:04hrs, accompanied by carer. Worsening cough, SpO2 recorded at 94 by NIAS paramedics. On examination Mr "X" is noted to be restless, RR 19, pyrexia, pulse 112, SpO2 96, CXR showing bilateral infiltration in keeping with Covid infection, much worse than CXR on previous CXR attendance. ED Dr A discussed DNAR with Mr "X's" mother per phone. (He recorded a retrospective note of this conversation on the 30/04/20.) He explained Mr "X" was being treated with antibiotics in  |

| 5.0 DESCRIPTION OF INCIDENT/CASE                                  |           |                       |  |  |
|---|-----------|-----------------------|--|--|
|   |           |                       |  | case of a secondary chest infection but that there was no medication to treat the Covid infection. In case of a further deterioration he explained that he would be unlikely to recover from admission to ICU (intensive care unit). He recalled that she agreed it was not in Mr "X's" best interests to go through this traumatic process and that she agreed with his DNAR (do not attempt resuscitation) assessment.   |
| <div>Personal Information redacted by the USI</div> @<br>03:15hrs | CAH Notes | Consultant            |  | Mr "X" is admitted to medical ward 2 South on <div>Personal Information redacted by the USI</div> at 03:15, unaccompanied by carer. Uncooperative with nursing observations at times, non-compliant with assistance at times and sometimes 'hitting out' at staff. Seen on am ward round by Consultant B, Covid diagnosis, DNAR noted. Additional antibiotic prescribed.   |
| <div>Personal Information redacted by the USI</div> @<br>12:00hrs | CAH Notes | Respiratory physician |  | <div>Personal Information redacted by the USI</div> at 12:00hrs Respiratory physician Dr C discussed with Mr "X's" mother and brother per phone in response to a solicitor's letter dated 29/04/20 which expressed the view that his mother did not agree with the DNAR status. Dr C explained, because of his low oxygen level, there would be a trial of CPAP (continuous positive airway pressure) if he could tolerate it, but beyond that admission to ICU would not be in his best interests. Mr "X's" mother did not agree. Dr C referred the case to the ICU consultants for assessment. Mr "X's" DNAR is suspended at this point. |
| <div>Personal Information redacted by the USI</div> @<br>14:00hrs | CAH Notes | ICU Consultant        |  | <div>Personal Information redacted by the USI</div> at 14.00hrs. Assessment by ICU Consultant D, noted to have deteriorating oxygen levels since admission but not cooperating with oxygen therapy by facemask and other nursing interventions. The assessment concludes that Mr "X" would be unable   |

|                                  |           |                                |            | to tolerate medical and nursing interventions in ICU and would therefore ultimately not survive an admission to ICU. A second opinion from another ICU consultant is requested and carried out on [redacted] at 15:00hrs by Consultant E who agrees with the above and concludes that a positive outcome from admission to ICU is 'remote in the extreme', adding the comment that this is not simply because of the diagnosis of learning disability but because of the specific clinical presentation and the consequent problems of delivering care in ICU.              |
| [redacted]<br>@<br>16:00hrs      | CAH Notes | Respiratory ward<br>Consultant | [redacted] | at 16:00hrs Respiratory ward Consultant F explains ICU decision and the nature of the illness to Mr "X's" mother and brother and that he would be transferred to the respiratory ward 2 North for a trial of CPAP; notes that they are content to go along with the medical opinion at present. DNAR is reinstituted.<br><br>CPAP trial is unsuccessful; Mr "X" is extremely agitated and pulling off mask despite sedation with Midazolam followed by Diamorphine. Mother contacted by phone to advise he is in respiratory failure and may not survive through the night. |
| [redacted]<br>@<br>23:45hrs      | CAH Notes |                                | [redacted] | at 23:45 Mr "X's" brother is allowed visit in full PPE. Brother enquires about treatment with hydroxychloroquine but is advised that this is only a trial drug and is not indicated.  |
| [redacted]<br>@06:40hrs          |           |                                | [redacted] | at 06:40hrs. Verification of life extinct, time of death confirmed as 06:29hrs. <b>NB Granville timeline records 05:30 - as per message from Mr "X's" brother.</b>  |

**6.0 FINDINGS**

1. The care delivered by Granville Manor staff was timely and appropriate in responding to Mr "X's" symptomatology and Covid diagnosis. Their frequent and detailed communication with his family was an example of good practice. Their note taking was detailed and displayed a high degree of attentiveness to his needs as his condition deteriorated.
2. Granville Manor staff managed a number of interactions with the OOH GP, NIAS and CAH ED extremely well whilst at all times advocating for Mr "X" to the best of their ability in a complex and rapidly evolving situation. His illness followed what is now a well-recognised pattern, however at that point it was an emerging illness which presented a difficult challenge to their staff, OOH GP, NIAS paramedics and CAH medical and nursing staff, not to mention health and social care services worldwide. They followed the advice of the CAH ED, OOH GP and NIAS paramedics diligently.

Their decision not to accompany Mr "X" on his first visit to CAH ED, as would have been normal practice, was because of concerns raised by the NIAS paramedics that staff may not be admitted because of Covid restrictions. Whilst this was understandable, it was subsequently clarified that he could be accompanied into ED and was so on his second visit and third visit, but not into the inpatient ward.

The review team recommends that a multidisciplinary risk assessment (as has been developed by CAH ED for patients with mental health issues) be devised to assess risk, in particular whether or not learning disability staff should accompany patients from ED/admission through to inpatient stay.

It is possible that learning disability staff assisting throughout the inpatient journey may have made a positive impact in helping to reduce Mr "X's" distress and possibly allowing him to better engage with medical and nursing interventions. On interviewing the medical staff involved, it was thought this would have been unlikely when Mr "X's" respiratory distress was overcoming him but may have been of assistance during the initial part of his admission.

**6.0 FINDINGS**

3. The medical and paramedical assessments by GP and GPOOH, NIAS paramedics, ED nurses and medics, respiratory ward medics and ICU medics were for the most part comprehensive and appropriate. The exception being Mr “X’s” first attendance at CAH ED which, being unaccompanied by care home staff, made it difficult for ED staff to engage with him whereas in the subsequent two ED attendances the presence of a care home staff member proved to be beneficial. This proved to be particularly important in obtaining chest x-rays (CXR’s) on both his second and third visits, being able to compare these was a key factor in the decision to admit to the inpatient ward.

There appeared to be differing views as to whether or not he should have been brought to CAH ED on the second occasion, GP OOH having advised Granville staff to call 999 if there was deterioration, as had been the advice when sent home from ED on the first occasion. Granville staff adjudged that there was deterioration throughout the day of the Personal Information  
redacted by the USI between the first and second ED attendance. They commented that NIAS were reluctant to return him to ED and noted that they had had to be assertive and insist. However, after further consultation NIAS did agree. Later that evening feedback from ED nursing staff commented, according to Granville staff’s notes, that the visit to ED had been unnecessary.

These varying views are understandable in the context of Covid being an emerging illness whereby the pattern of deterioration was still being understood and was difficult to predict. Although it proved to be the case that there was no significant deterioration between the first and second ED attendances, the second attendance accompanied by care home staff proved productive in terms of establishing a very useful baseline assessment (including a CXR as mentioned above). This is testament to the care provided by Granville staff that they acted as effective advocates for their resident throughout this difficult time.

4. The treatment and advice provided to Mr “X” and his family by medical and nursing staff at all stages was carefully considered and appropriate to his needs. The thorough assessments by respiratory and ICU physicians concerning the DNAR issue and admission to ICU was an example of good practice, as was

**6.0 FINDINGS**

their recording of this in the inpatient notes and ongoing communication with his family. However, the initial discussion per phone by ED Dr A on the Personal Information  
redacted by the USI regarding Mr "X's" DNAR status was unsatisfactory from his mother's point of view. Although Dr A concluded that she was in agreement with the assessment, she subsequently felt it necessary to send a solicitor's letter to the respiratory physician Dr C to state that she did not agree and to ask that the DNAR be rescinded.

One phone call to discuss the DNAR issue with a distressed nearest relative proved inadequate in this case. After further detailed discussions with respiratory and ICU medical staff, which also included Mr "X's" brother, she did gain a better understanding of the rationale behind this difficult decision. It is clear from the detailed medical notes that the decision was based on Mr "X's" overall clinical presentation rather than simply based on his frailty as a result of his learning disability, and that in their considered opinion resuscitation and ICU admission would not be in Mr "X's" best interests.

The review team recommends that the care home or community key worker should be engaged to mediate in advanced care planning including DNAR decision in patients with learning disability.

5. Taking into account all of the above, it would be incorrect to conclude that Mr "X's" learning disability diagnosis per se was such an influence on his treatment that it rendered that treatment inequitable.

**7.0 CONCLUSIONS**

The overall care provided to Mr "X" was of an appropriate standard and at times was exemplary given the understandable difficulties experienced by all health and care staff in responding to the emerging pandemic. The adverse outcome resulting in his untimely death was unavoidable, the singular causative factor being infection with the Covid virus bringing about respiratory failure. Further engagement will take place with Mr "X's" family in relation to sharing and discussing this report.

**8.0 LESSONS LEARNED**

1. Granville care home staff training in infection prevention and control (IPC) has been augmented with the assistance of SHSCT IPC staff after an IPC 'walk through' and has since been updated on a regular basis.
2. Granville care home staff are now trained and capable of following SHSCT procedures for donning and doffing of PPE attire in order to accompany learning disability patients into inpatient units during the pandemic.
3. Engagement of care home or community key worker staff in mediation regarding advanced care planning including DNAR decision in patients with learning disability.
4. There is learning from NIAS / CAH ED interaction re Mr "X" being brought to the incorrect address from ED on Personal information redacted by the USI resulting in approx. 2 hours unnecessary delay for Mr "X" in the ambulance.
5. Out of hours service to contact 999 directly when advising ambulance attendance rather than requesting care home staff to ring 999, as OOHrs will have access to clinical information that will enable appropriate triage of 999 call.

**9.0 RECOMMENDATIONS AND ACTION PLANNING**

| <b>8. SUMMARY OF EVENT:</b>  |  |

On [Personal Information redacted by the USI], [Personal Information redacted by the USI] was admitted to the Male Medical Ward (MMW) at Daisy Hill Hospital (DHH) following a collapse outside in the street. He was being treated for aspiration pneumonia, alcohol withdrawal and rib fractures when his condition deteriorated. He subsequently had increasing oxygen requirements and was transferred to High Dependency Unit (HDU) on [Personal Information redacted by the USI] for AIRVO management (a humidifier with integrated flow generator that delivers warmed and humidified respiratory gases to spontaneously breathing patients). On [Personal Information redacted by the USI]'s condition deteriorated further there was difficulty obtaining medical assistance. [Personal Information redacted by the USI] subsequently required intubation and ventilation and post this was transferred to the Intensive Care Unit (ICU) at the Royal Victoria Hospital (RVH) for management. He was extubated on [Personal Information redacted by the USI] and returned to DHH on [Personal Information redacted by the USI].

[Personal Information redacted by the USI], Male aged [Personal Information redacted by the USI]

### 12. WHAT HAPPENED?

[Personal Information redacted by the USI] was brought in by ambulance to the Emergency Department (ED) of Craigavon Area Hospital on [Personal Information redacted by the USI]. The triage nurse who saw [Personal Information redacted by the USI] at 09:13 noted that he appeared to be behaving strangely and that he had an altered conscious level. She documented that he was found close to his home (outside) was conscious and confused. The triage nurse noted that [Personal Information redacted by the USI] had an unkempt appearance. His pulse (P) was 83, blood pressure (BP) 128/69, respiratory rate (RR) 17, temperature (T) 37, oxygen saturations (SpO2) 96% and Glasgow Coma Scale (GCS) 13. The triage nurse

completed a safeguarding (APP1) form and triaged [redacted] as a priority 2 patient (to be seen within 10 minutes).

At 10:11 [redacted] was seen by Doctor 1 (ED Senior House Officer) who noted that [redacted] was a [redacted] old male who was confused and elusive with answers. He documented that [redacted] drank copious amounts of vodka and that his last drink was the day previous. [redacted] stated that he had taken no other drugs and that the left side of his chest was sore to touch. Doctor 1 noted [redacted] background and social history. [redacted] was not short of breath and did not have a cough. On examination his chest was tender around the 3<sup>rd</sup> left rib. His heart sounds were normal and his pulse was regular. His abdomen was soft and non-tender. He was moving all 4 limbs, his GCS was 14, he had no obvious head or neck injury. His left eye was blood shot and the impression was that he had a query bleed and query alcohol related. The plan was to await blood results, have an ECG, a CT brain and GMAS +/- Librium.

At 13:21 [redacted] was discussed with Consultant 1 (Emergency Department Consultant) who advised that [redacted] was a vulnerable adult and needed admission for social assessment. [redacted] was accepted by MMW and he left ED at 15:43 for transfer to DHH.

On [redacted] was transferred to HDU and since then he was seen twice on a daily basis by the medical team. [redacted] was seen assessed and treated as required by a physiotherapist as he was experiencing chest secretions. He proceeded to have a CTPA which ruled out a pulmonary embolism. By [redacted] was noted to be feeling much better, sitting out and had come off AIRVO. He was reviewed by the anaesthetic team who were happy that [redacted] appeared well and his condition was controlled.

On [redacted] it was noted that some of [redacted]'s arterial blood gasses (ABG's) were abnormal and he had become breathless. It was noted that a chest x-ray from the previous day reported worsening shadowing. The plan was for an anaesthetic review as [redacted] was tired and had increased work of breathing. This review was carried out at 11:30 at which stage [redacted] was on AIRVO at 60%, 60L. His SpO2 was 100%, RR 23, BP 132/64 and P 78. He was noted as sitting in the chair and appeared frail, and whilst confused was able to understand. He was noted to be comfortable from a pain point of view and able to take deep breaths. The plan was to continue medical management as [redacted] appeared to be responding well and in the right direction. [redacted] had a further anaesthetic review at 16:45 and 20:20 as there was a reduction in his GCS. On review [redacted] appeared stable vitally, his ABG's reviewed and the plan was to continue medical management. The anaesthetic team were happy to review [redacted] again if needed. They noted that [redacted] was responding well to antibiotics and that he was comfortable from a pain point of view. They also noted they would consider CPAP/intubation if the situation dictated so.

On [redacted] became very unsettled from 00:00 until 01:00 and was climbing, was disorientated and asked for the toilet. He was re-orientated and settled back to sleep at 1am. He woke again at 04:30 when he was confused and was climbing again. Lorazepam 1mg was given intra-muscular (IM) with little effect. He settled again from 06:00 for 30 minutes and then wanted out of bed. He was given the assistance of one person at 07:00 and helped out to the chair. His bloods were obtained and sent. IV Tazocin and IV Pabrinex was administered and nebulisers given. His arterial line was intact and recalibrated. Input was recorded as 1960mls and output 1490mls.

[redacted] was seen by Doctor 2 (Staff Grade Medicine) at 08:40. She noted that [redacted] was day 5 admission following a fall and alcohol excess. It was noted that [redacted] had aspiration pneumonia, was on Librium and had a rib fracture. Doctor 2 noted that [redacted] was chesty ++, though had minimal pain and a strong cough. It was noted that [redacted] pulled off the AIRVO for 2 minutes that morning and his saturations were 94% on room air but still needed AIRVO for work of breathing. Doctor 2 noted that

there were bilateral crackles heard on [Personal Information redacted by the ULS]'s chest and reviewed his blood results. She highlighted that whilst [Personal Information redacted by the ULS] was haemodynamically stable, he was vulnerable to deterioration and at risk of aspiration so asked for him to fast until there was a review by the Speech and Language Therapist (SLT). Doctor 2 noted that [Personal Information redacted by the ULS]'s chest x-ray looked slightly full and that there was a reduced threshold for diuretic. Doctor 2's plan included sitting [Personal Information redacted by the ULS] out as much as possible, reduce FO2 and continue with the increased flow, chase sputum, hold intravenous fluids, review the remainder of the lab results, give 7 days of Tazocin, PRN lorazepam & document GMAWS (Glasgow Modified Alcohol Withdrawal Score.)

During the course of the morning [Personal Information redacted by the ULS] was cared for by nurse 1 who assisted to get [Personal Information redacted by the ULS] out to sit and encouraged deep breathing. [Personal Information redacted by the ULS] sent a sputum sample for testing and reduced AIRVO from 60% to 50% as per Doctor 2. [Personal Information redacted by the ULS]'s oxygen saturations were 97-100% on same. His ABG's were reviewed and to be repeated at 12:00. GMAWS at 12:00 were 3. Staff nurse 1 noted at 12:45 that [Personal Information redacted by the ULS] was reviewed by the medical team who were happy with his ABG's. His AIRVO was to be reduced slowly with a view to stopping same. ABG's and daily bloods were to continue. At 15:00 staff nurse 1 contacted Doctor 3 (FY1) in relation to the decrease in [Personal Information redacted by the ULS]'s urine output.

Doctor 3 reviewed [Personal Information redacted by the ULS] at 15:45 who reviewed [Personal Information redacted by the ULS]'s fluid output. His NEWS (National Early Warning Score - an early warning score is a guide used by medical services to quickly determine the degree of illness of a patient) were 4. His RR was 24, SpO2 95% on 40% 60L AIRVO, T 36.3, BP 142/70, P 89 and Egfr >60. Doctor 3 noted that [Personal Information redacted by the ULS] was waiting on a SLT review and that he was unable to get any oral intake. His case was discussed with Doctor 2 and the plan was for 40mg IV furosemide stat, continue hourly urometer reading, repeat arterial blood gas in 1 hour and monitor K+. At 17:00 staff nurse 1 shared the results of the arterial blood gases with Doctor 3 who asked for them to be repeated again at 19:45. Staff nurse 1 noted that [Personal Information redacted by the ULS] remained very agitated, confused and was attempting to climb out of bed.

He was seen by Physiotherapist 1 at 17:30 who noted that [Personal Information redacted by the ULS] was agitated and he had increased work of breathing with a respiratory rate of 30. A droop in [Personal Information redacted by the ULS]'s mouth was noted though his CT brain did not detect any abnormality. AIRVO was increased to 90% oxygen on 60L Spo2 97-100%. His RR remained at 30-37. It was noted that [Personal Information redacted by the ULS] had poor compliance with chest physio and that yanker suction was of no benefit. There was an increase in [Personal Information redacted by the ULS]'s agitation with increased attempts of chest physio and no sputum expectorated. Physiotherapist 1 noted that [Personal Information redacted by the ULS] was at risk of fatigue due to increased work of breathing and that CPAP was unlikely to be beneficial due to compliance with mask.

Later that evening (time not documented) Doctor 4 (Registrar) was asked to see [Personal Information redacted by the ULS] due to reduced oxygen on ABG results. Doctor 4's impression was that [Personal Information redacted by the ULS] had aspiration but there was no suggestion that it was worsening, he had pulmonary oedema, good diuresis and mucous plugging. The plan was for repeat ABG's with hourly observations, physiotherapy, cover with Tazocin, blood cultures if temperature >38, ECG, not fit for CPAP, discuss with ICU if failure to improve, further sputum sample, test urine for legionella and pneumococcus and also short viral screen. There was then another review by Doctor 4 – again time not documented. Noted there had been a good diuresis, oxygen levels were satisfactory. Plan was to continue with the same, reduce oxygen as able, await sputum and contact medics if there were concerns regarding [Personal Information redacted by the ULS]'s condition.

At 20:00 [Personal Information redacted by the ULS] was seen again by Physiotherapist 1 who attempted further chest physiotherapy. She noted that [Personal Information redacted by the ULS]'s cough was ineffective and he was unable to clear secretions. There was minimal sputum cleared, he became agitated and pulled off AIRVO. The plan was to review [Personal Information redacted by the ULS] the following morning and continue AIRVO as able.

At 21:30 staff nurse 2 introduced herself to [Personal Information redacted by the ULS] following handover. She documented [Personal Information redacted by the ULS]'s

observations as RR 23, SpO2 98% on AIRVO 60L, T 36.3, BP 130/69, P 106. His NEWS was 5 and he was on 1 hourly observations. Staff nurse 2 noted that [Personal Information redacted by the ULSI] was very unsettled in bed, climbing out and taking AIRVO off. His GMAWS was 3, GCS 14/15 and it was noted that latest ABG's which were PH 7.44, PO2 7.64, PCO2 5.77. This indicated that his oxygen levels were slightly low at this point - other levels were satisfactory. He was given 1mg of lorazepam @ 20:35 with great effect. She noted that [Personal Information redacted by the ULSI] had an arterial line to his right hand. [Personal Information redacted by the ULSI] had slight bruising and discolouration to both hands and was awaiting SLT review.

Subsequent to this [Personal Information redacted by the ULSI]'s NEWS increased to 6 and this was escalated to Doctor 5 (Registrar) who advised that he would not review [Personal Information redacted by the ULSI] as the physiotherapist could deal with the AIRVO and that [Personal Information redacted by the ULSI] would have high NEWS scores. Staff nurse 2 contacted the physiotherapist for assistance. At 21:50 [Personal Information redacted by the ULSI] was given intravenous antibiotics and paracetamol and Pabrinex given as per kardex. The ABG was repeated and reported as PH 7.4112, PCO2 5.91, PO2 11.4 K+ 3.6; Na+ 142; Glu 4.4. These indicated that his oxygen level was improved from the previous reading – all other levels were still satisfactory. Nebulisers were given as per kardex as well as constant reassurance. Staff nurse 2 documented that [Personal Information redacted by the ULSI] needed 24/7 supervision.

At 23:59 [Personal Information redacted by the ULSI] was seen by Doctor 5 who noted that [Personal Information redacted by the ULSI] was agitated, there was no other clinical change and therefore lorazepam PRN should be given. No NEWS score documented in medical notes.

At 00:00 on 24 July 2020, staff nurse 2 noted that [Personal Information redacted by the ULSI] was very confused, unsettled trying to get out of bed and pulled his arterial line out. Doctor 5 was bleeped, the situation explained and he was asked to review the patient. Doctor 5 refused to carry out a face to face review. [Personal Information redacted by the ULSI] pulled off his AIRVO and was violent towards staff and pulled off the wires attached to the monitor. Staff nurse 2 tried to reassure [Personal Information redacted by the ULSI] without success. Staff nurse 2 bleeped the Bed Manager to ask for medical assistance. Staff nurse 2 managed to get [Personal Information redacted by the ULSI] back on AIRVO 60L 70% and he settled slightly.

At 00:45 [Personal Information redacted by the ULSI] became very aggressive again and took off AIRVO, saturations probe, ECG wires and used foul language towards staff nurse 2.

At 02:00 [Personal Information redacted by the ULSI] was seen by Doctor 6 (FY1) and following discussion with Doctor 5 prescribed furosemide 50mg given intravenously, metoclopramide and diamorphine PRN. [Personal Information redacted by the ULSI] was very agitated and restless.

At 03:30 [Personal Information redacted by the ULSI] pulled his hospital gown off and monitor leads. Staff nurse 2 noted he was in and out of sleep and managed to put the saturations probe back on his toe and hospital gown. At 05:00 his saturations had decreased to 86%. He was given saline and his saturations increased slowly up to 93%. At 05:30 [Personal Information redacted by the ULSI]'s saturations were 98% and he was asleep. He was given IV paracetamol, Tazocin and Prabinex given as per kardex.

At 06:30 [Personal Information redacted by the ULSI]'s saturations dropped to 83% and nebulisers were given. The on call physiotherapist was bleeped as was Doctor 5. At 07:00 staff nurse 2 had no response from Doctor 5 so bleeped him again. Doctor 5 advised that he would not be reviewing [Personal Information redacted by the ULSI]. Subsequent to that Doctor 5 was contacted a third time and he came to ward, spoke to the nurse but did not review [Personal Information redacted by the ULSI]. At 08:00 staff nurse 3 (nurse in charge) documented that she had reviewed [Personal Information redacted by the ULSI] along with Doctor 5. [Personal Information redacted by the ULSI] appeared more settled, his breathing had improved slightly and it was noted that his saturations were up and down, overall similar to the start of the night. NEWS not documented in medical notes. The plan was for further physiotherapy, oxygen as required and a further chest x-ray. They felt further ABG would not change management.

The physiotherapy review took place at 07.20 (entry was written at 08.30) when it was noted that

had ongoing confusion, was unsettled in bed and kept trying to take the AIRVO off during the night. The physiotherapist noted pain described as central chest pain. 's BP was 136/90, P 94 and RR 30. His SpO2 was 97% on AIRVO 60L/86% oxygen. Treatment was attempted but there was poor compliance and struggled with same and became fatigued quickly. The physiotherapist suggested a repeat x-ray to determine the cause of deterioration.

was seen by Doctor 2 at 09:15 regarding his deterioration and noted that she was worried about who had ongoing respiratory failure, a clear clinical deterioration and fluid overload. Her plan included an urgent chest x-ray, anaesthetic referral, start diuretic, see labs, micro ? meropenem, repeat gas in 1 hour and update next of kin. At 10:15 Doctor 2 attended with Doctor 7 (grade) when 's breathing was laboured and his left chest wall was depressed. The plan was to have a discussion with theatres and if there was any deterioration the medical team were to be re-contacted. At 11:50 's brother was spoken to by Doctor 2. was then seen on the ward round by Doctor 8 (Consultant Physician) when advice was sought from the surgical team, cardiothoracic team and the anaesthetic team. At 12:00 was seen again by Doctor 2 as his condition had deteriorated. Doctor 7 attended also and advised that needed to be intubated and ventilated. He was transferred at 12:00 to theatres where he remained until his transfer to ICU at RVH at 18:40.

### 13. WHY DID IT HAPPEN?

#### Patient Factors

The review team noted on admission looked frail and unkempt but had no previous medical admissions and no significant medical history. was noted to be a heavy smoker, take alcohol in excess and had suffered from a fall sustaining multiple left sided rib fractures. The review team have highlighted that was agitated and as a result was difficult to manage, however this would not be uncommon for patients who are detoxifying from alcohol especially with other medical issues.

#### Clinical Assessment

The review team have examined the medical notes associated with 's admission. They are satisfied that he was on an appropriate antibiotic and that his pain was being managed. They are cognisant of the fact was being detoxified from alcohol, this can be a difficult balance to achieve with over sedation and under sedation being issues both having potential effects on the patient. This may have had some impact on clinical course but management of this was appropriate. The day team had noted a clear plan which was documented by the Anaesthetic Team which detailed the steps to be taken if deteriorated.

The review team have identified that deteriorated on the morning between 05:00 and 06:30 with his NEWS score climbing from a baseline of 5-6 overnight to a score of 8 secondary to an increase in respiratory rate (an important factor) and a drop in SpO2 this subsequently moved to 9. The review team believe a thorough medical review should have taken place then and earlier than when it did. They have clarified that the pre-determined escalation plan should have been referred to and 's condition should have been escalated to the Anaesthetic Team. Whilst this may not have changed the outcome for it would have changed his immediate management. The review team have noted that a thorough (excellent) review took place at 09:15. There was a recognition that his condition had changed significantly from the previous day and an appropriate plan was initiated including an anaesthetics review. There was further deterioration over the course of the morning prompting intubation and transfer to ICU.

#### Supervision and Leadership

The review team have noted that after doctor 5 reviewed [Personal Information redacted by the USI] at 07:00 on [Personal Information redacted by the USI], there was no reference to a discussion with the consultant on call. The review team felt that the consultant on call could have been contacted at this time for advice.

## Workload

HDU is an 8-bedded ward and on the night in question there were 5 patients being nursed there. The review team understand that there were 4 registered nurses on night shift which would have been the normative staffing for this clinical area. Although 1 to 1 nursing was required for [Personal Information redacted by the USI] this would have been possible with these ratios.

## Team Factors

The review team note that staff nurse 2 escalated [Personal Information redacted by the USI]'s NEWS of 6 at 21:30 on [Personal Information redacted by the USI] however [Personal Information redacted by the USI] did not receive a face to face review until 23:59 that evening. The review team feel that had a medical review taken place at this time it would not have changed [Personal Information redacted by the USI]'s management. They have noted that at this time [Personal Information redacted by the USI]'s issue was agitation rather than concerns with his chest and breathing. Nonetheless the review team accept that this left staff nurse 2 feeling isolated and have identified that staff nurse 2 could have escalated her concerns to the site manager. The notes reference a call for assistance from the Bed Manager and the advice given was that staff nurse 2 should try liaising again directly with medical staff. The review team advise it would have been helpful for staff nurse 2 to have had additional support from senior nursing staff to impartially resolve her concerns about [Personal Information redacted by the USI].

Whilst none of the review team were present on the night in question and they are relying on the documentation to formulate an opinion, they feel that the teams could have worked more effectively together to care for [Personal Information redacted by the USI] on the evening of [Personal Information redacted by the USI] and into the morning of [Personal Information redacted by the USI]. The review team believe that effective multi-disciplinary working leads to improved patient care.

## Communication and Documentation

The review team have examined the Hospital at Night handover sheet for the night in question, [Personal Information redacted by the USI] was not on this handover document, this would have been an appropriate forum to do a formal handover.

The NEWS score is a key tool to assess sick patients. The review team note the trend of [Personal Information redacted by the USI]'s NEWS overnight on the night in question gradually increased highlighting his gradual deterioration. This should be used as one method to communicate the issues. A trigger could also have been set by the medical team so the nursing team would know at what point to re-contact them and the urgency this would need to be done.

The review team are mindful of the fact that good communication is integral to good patient care and that all teams should work collaboratively, respecting each other's skills and contributions. The review team have commented that staff should be aware of how their behaviour may influence others and that everyone should be treated fairly and with respect. Listening to concerns of other staff members is part of this process.

In relation to documentation, whilst the review team have been able to identify good examples of clear and detailed medical entries both before and after [Personal Information redacted by the USI]'s deterioration, some lacked detail e.g., time of assessment. The assessment on the morning of the deterioration was not as comprehensive as it could have been and missed so details such as NEWS scores.

**SECTION 3 - LEARNING SUMMARY****14. WHAT HAS BEEN LEARNED:**

Good communication, which is clear and effective between teams is vital to ensure that the multi-disciplinary team works collaboratively to maintain or improve patient care.

Personal Information redacted by the HSCB  
 's case has highlighted that the accurate recording of NEWS is absolutely crucial in assisting with the identification of a deteriorating patient. The use of a trigger score should be used as another method of communicating changes in a patient's condition. Each member of staff needs to be fully informed about and aware of pre-discussed plans for the event of deterioration and put these into place as required. The medical/hospital at night handover meeting is a crucial part of this and needs to be facilitated by the most senior members of the team to ensure safe management of patients.

The review team have emphasised that if nursing staff are not satisfied with how a patient is being managed medically out of hours that they should escalate their concerns to the registrar and/or the site manager if necessary.

**15. WHAT HAS BEEN CHANGED or WHAT WILL CHANGE?**

All nursing staff will be reminded of the requirement to follow the recognised escalation process should they have ongoing clinical concerns about the medical management of a patient.

In addition the Trust will continue to review findings of NEWS audits which are carried out as part of the Nursing Quality Indicators and act on any recommendations noted.

**16. RECOMMENDATIONS (please state by whom and timescale)**

All nursing staff should be adequately trained in the use of the NEWS tool and be aware that they can agree trigger points with medical teams. This issue will be placed on the agenda of the Senior Nursing and Midwifery Governance Forum within 3 months of the publication of this report.

All nursing staff will be reminded of the requirement to follow the recognised escalation process should they have ongoing clinical concerns about the medical management of a patient. This should be carried out within 3 months by the Executive Directorate of Nursing.

The Trust should ensure it has arrangements in place for the safe and effective handover of patients, during the out of hours period, so therefore a complete review of the hospital at night process should be undertaken to include details of how patients are added to the report, how outcomes are listed and how discussions are noted and kept for future reference. This should be led by the Assistant Director of Acute Services with responsibility for Patient Flow within 6 months of the publication of this report.

**17. INDICATE ANY PROPOSED TRANSFERRABLE REGIONAL LEARNING POINTS FOR CONSIDERATION BY HSCB/PHA:**

None.

**18. FURTHER REVIEW REQUIRED? No.**

Please select as appropriate

If 'YES' complete SECTIONS 4, 5 and 6.

If 'NO' complete SECTION 5 and 6.

**SECTION 4 (COMPLETE THIS SECTION ONLY WHERE A FURTHER REVIEW IS REQUIRED)**

NIAS received call at 13:25, and an ambulance was dispatched, it was noted the patient was FAST positive. A standby call was made to CAHED and patient arrived at CAH ED at 15:19. A CT brain was carried out at 16:15, followed by a CTA. The patient was accepted by RVH for thrombectomy. ED nurse contacted NIAS and requested a 999 blue light ambulance for transfer to the RVH for potential thrombectomy, however the ambulance did not arrive at CAHED for almost two hours later. The RVH were unable to offer thrombectomy treatment as the service was unavailable at that time of the patient's arrival at 19:50.</p> |   |

DOB : [Personal Information redacted by the USI] FEMALE AGE : [Personal Information redacted by the USI]

## 12. WHAT HAPPENED?

On the [Personal Information redacted by the USI] at 13:23 NIAS received a call. An ambulance was dispatched and arrived at the scene at 13:37 leaving the scene at 14:20. [Personal Information redacted by the USI] was FAST positive and a standby call was made to Craigavon Area Hospital Emergency Department CAH ED.

[Personal Information redacted by the USI] arrived at CAH ED at 15:19, registered at 15:32. It was reported [Personal Information redacted by the USI] had a new acute neurological deficit less than 24 hours ago. It had been reported [Personal Information redacted by the USI] was at work that morning and became unwell, she started to act strange, her speech became slurred and she vomited. Observations were taken on arrival and were noted as Pulse 103bpm, Blood pressure (BP) 128/94mmHg; Temperature 36.6 °C ; Spo2 95%, GCS 11/15. The Stroke Lysis team was immediately called and reviewed [Personal Information redacted by the USI] at 15:40.

On review [Personal Information redacted by the USI]'s past history was documented, it was noted [Personal Information redacted by the USI] was a previous smoker and it was reported [Personal Information redacted by the USI] had been well the last few days and drove into work herself that morning at 05:00. An account taken from a work colleague advised [Personal Information redacted by the USI] became suddenly unwell at approximately 10:00. [Personal Information redacted by the USI] was unable to control her arms, [Personal Information redacted by the USI] was unable to speak and appeared confused. A work colleague drove her home.

On assessment [Personal Information redacted by the USI] had a NIHSS score of 11. A CT brain scan was ordered at 15:43 the request was lifted off the system at 16:03, the examination was performed at 16:40 and reported at 16:54. A verbal report was available which concluded a left MCA territory > 5cm diameter subacute infarction.

[Personal Information redacted by the USI] was discussed with the Senior Stroke Physician and it was determined [Personal Information redacted by the USI] arrived outside the thrombolysis window and she was for a potential thrombectomy. A working diagnosis was made of a left total anterior circulation stroke (TACS) and it was documented [Personal Information redacted by the USI] had fast arterial fibrillation (FAF). A management plan was made for an echocardiogram, to review bloods, prescribe intravenous fluids 500ml bolus, Bisoprolol 2.5mg and Metoprolol 5mg to be prescribed due to an increased heart rate of 160bpm.

At 16:34 [Personal Information redacted by the USI] was discussed with the Royal Victoria Hospital (RVH) regarding possibility of a thrombectomy.

Following discussion with RVH, [Personal Information redacted by the USI] was accepted for transfer for potential clot retrieval. At 17:15 NIAS were contacted to provide a 999 ambulance transfer to the RVH. [Personal Information redacted by the USI] did not leave CAH ED until 19:00. The delay in transfer resulted in thrombectomy not being offered. [Personal Information redacted by the USI] arrived at the RVH at 19:50 and subsequently arrived at the Stroke Unit at 20:05.

[Personal Information redacted by the USI] was admitted to the RVH overnight for monitoring as there was a query of malignant MCA syndrome however her GCS remained stable. NIHSS score at RVH was 14, and NIHSS score post 24 hour period was 18. [Personal Information redacted by the USI] was commenced on Aspirin and Clexane.

On the [Personal Information redacted by the USI] [Personal Information redacted by the USI] was transferred back to CAH stroke unit the following day for ongoing management and care. On the [Personal Information redacted by the USI] [Personal Information redacted by the USI] was transferred to DHH for rehabilitation. Prior to discharge home on [Personal Information redacted by the USI] it was reported [Personal Information redacted by the USI] had some subjective reduction in power on her right side and her balance and gait still required some development and that she was able to perform basic ADLs. It was documented [Personal Information redacted by the USI] however had significant expressive aphasia and would be very vulnerable and requires supervision at all times while at home.

## 13. WHY DID IT HAPPEN?

The above incident was discussed in depth to identify any immediate learning. Following debrief with staff involved it was determined there were numerous factors for the delay in treatment and learning extracted.

NIAS explained that a rapid response vehicle was dispatched to [Person al Information]'s home and arrived promptly, followed by back up crew. NIAS have confirmed [Person al Information] was unable to speak English and her son assisted with interpretation. NIAS highlighted the language barrier subsequently slowed the initial assessment and acquired history and thus explains the reason for the lengthy period of time spent at [Person al Information]'s home prior to departure. NIAS confirmed the rapid response paramedic arrived 15 minutes after being dispatched. The paramedic requested urgent assistance 8 minutes later and the ambulance vehicle arrived 7 minutes later. The RRV paramedic travelled with the patient. The total on scene time assessment, waiting time for conveyance ambulance and package was 43 minutes from RRV paramedic arrived at the scene in [Person al Information redacted by the USI].

At the time of the call DHH ED was closed due to the current Covid 19 pandemic. NIAS advised their protocol is to go to the nearest ED, in this case CAH ED which took 1 hour 11 minutes. NIAS emphasised prior to Covid [Person al Information] would have been taken directly to DHH ED which would have taken only 30 minutes. Paramedics appropriately contacted CAH ED for a standby call at 14:36. [Person al Information] arrived at CAH ED at 15:19, and was triaged at 15:34 and the Stroke lysis team was called. It has been identified that the stroke team was already dealing with another stroke lysis patient in the department at the time of [Person al Information]'s arrival. Doctor 1 was immediately made aware of the stroke lysis call and aware of [Person al Information]'s arrival and subsequently attended to [Person al Information] within minutes. Discussions during debrief highlighted it is not practical to have a stroke team on standby for a lengthy period of time in ED waiting for a long distance ambulance to arrive. An ambulance pre alert call 5 minutes prior to arrival to ED was suggested to rectify this issue. NIAS emphasised this would not always be practical as paramedics would generally be dealing with an unwell patient in a moving ambulance and they may not be able to communicate the message in time. NIAS advised paramedics are advised to provide an ATMIST pre alert which should include an estimated time of arrival. It was suggested that if a NIAS HALO (Hospital Ambulance Liaison Officer) was on duty they could track ambulance better and provide a more accurate time of arrival from the estimated arrivals screen on longer journeys.

Doctor 1 noted the communication barrier with [Person al Information], again highlighting [Person al Information] was unable to speak English. Getting a medical history was difficult at the time and the onset time of stroke was unclear. Doctor 1 therefore appropriately contacted [Person al Information]'s workplace to acquire more information and discussed the case with Doctor 2. Doctor 1 also noted difficulties getting through to the CT department for CT brain scan and acceptance for a CT scan. Following CT it was established [Person al Information] was not a suitable candidate for lysis but queried if thrombectomy would be an alternative option and the RVH was appropriately contacted.

The On call Radiologist (doctor 3) explained at the debrief that there can be issues getting through to the radiology department at times, this is a Trust known problem. The radiology department could receive up to 100 calls and that they too also have the same issue getting through to other Wards and departments. The radiologist highlighted that thrombectomy service operates from 9am - 5pm Monday to Friday and had queried at the time if [Person al Information] was a suitable candidate for CT. Given the time of day doctor 3 queried was there any treatment available for [Person al Information] and also mindful the list of other patients requiring urgent use of the CT scanner.

Doctor 2 agreed thrombectomy service operates between the hours 9-5 Monday to Friday but underlined we should always give patients the best chance. A CT scan would always support and persuade a decision to transfer a patient to RVH for further treatment even if outside the service time. Ad hoc there may-be an interventionalist working on the RVH site who could potentially offer treatment outside service hours. Doctor 2 emphasised it is always in the patient's best interests that we consider all possibilities in such cases and this has been learned through previous teaching. This was a lady in her [Person al Information]'s and it is vital we done everything we possibly could to improve the outcome for her. Following discussion it was determined not all staff working in CAH are aware there may be potential for thrombectomy or perfusion scans in RVH outside service hours. This was discussed and was agreed potential learning for all medical and radiology staff. It was agreed details should be distributed among all medical and radiology staff working in SHSCT.

Doctor 1 advised that following the CT scan and discussion with RVH, [Person al Information] was accepted by the RVH for consideration of profusion scan and possible thrombectomy and doctor 1 advised nurse 1 to contact NIAS for 999 blue light ambulance for urgent transfer. Nurse 1 advised a request was made for a 999 blue light ambulance transfer to the RVH.

NIAS were able to provide detail of the call made advising a 999 ambulance was requested to come immediately. Nurse 1 advised there was no ambulance after a while and she tried checking NIAS HALO staff to acquire the cause of the delay. Nurse 1 advised the NIAS HALO staff member was on a break and when returned contacted ambulance control who advised an ambulance would arrive after shift handover. Nurse 1 advised another call was made to ambulance control to advise [Person al Information] was deteriorating significantly and they required ambulance immediately. It was following this further telephone call to NIAS that an ambulance was immediately dispatched and arrived at CAH ED for transfer to RVH. Unfortunately due to the in delay transfer [Person al Information] did not receive thrombectomy in RVH.

Discussion were had during the debrief for expediting an ambulance in such circumstances. Consideration was given in relation to HALO and whether HALO could potentially expedite an ambulance in cases like this one. NIAS determined that this would not be an option as HALO still must go through public line and the call may be delayed.

NIAS advised the initial call made to ambulance control did not specify that the request for an ambulance was 'time critical' and as a consequence the call was categorised as a category 3 i.e. to be there within 120 minutes and an ambulance was therefore not immediately dispatched for transfer. Another call happened to proceed nurse 1's request for an ambulance which was categorised as a higher critical call and therefore took priority over [Person al Information]'s transfer. NIAS advised the words 'time critical' should have been used in this case and also stressed the caller must provide a valid medical reason for a time critical ambulance i.e. in this case for urgent thrombectomy. Following further discussion among staff it was determined all CAH staff involved were not aware they must specifically say 'time critical' in such circumstances. The general consensus was to ask for 999 blue light ambulance for emergency transfer to RVH for thrombectomy. It was agreed this was a major learning point for all staff involved and highlighted that there is the potential risk that there are many other medical and nursing staff not only in SHSCT but other Trusts who are potentially unfamiliar with NIAS's Standard Operating Procedures (SOP) for 'time critical' ambulance requests. NIAS advised the PHA had previously agreed in 2016 with all Northern Ireland HSC Trusts a pathway for inter-hospital emergency transfer for thrombectomy at the RVH. This was reviewed in 2019 and emphasised the words 'time critical' should be used. It was agreed NIAS would forward the necessary SOP for sharing with all medical and nursing staff for learning.

Doctor 2 advised it was difficult to determine if [Person al Information] had arrived to RVH at an earlier stage could [Person al Information] have had a better outcome. The CT scan did confirm an established stroke however doctor 2 stressed it is in the patients best interests that all opportunities are explored before a final decision is made. Doctor 2 advised the CT scan confirmed [Person al Information]'s stroke was very well established evidencing that the stroke happened earlier in the day and [Person al Information] was therefore outside the window for stroke lysis therapy at that time, however following discussion with RVH it was agreed [Person al Information] was for transfer to the RVH for perfusion scan and consideration for thrombectomy if considered suitable.

### SECTION 3 - LEARNING SUMMARY

#### 14. WHAT HAS BEEN LEARNED:

Stroke is time critical and earlier identification and treatment is paramount for the patient's outcome. It is imperative all staff including paramedics, nurses, doctors, radiologists work together and act proficiently to increase the patients chance of survival and improved outcome. Communication and misconception of service were evidently factors in this case and learning has being extracted from the debrief meeting to be shared with all relevant staff.

**15. WHAT HAS BEEN CHANGED or WHAT WILL CHANGE?**

Regional Thrombectomy service Guidance and ad hoc availability is to be shared with all relevant staff.

HOS to update current SHSCT SOP for 'time critical' ambulance request in accordance with NIAS guidance and disseminate among relevant staff.

**16. RECOMMENDATIONS (please state by whom and timescale)**

1. NIAS to share SOP for 'time critical' ambulance requests. Responsible person - Personal Information redacted by the USt NIAS
2. HOS to update current SHSCT SOP for 'time critical' ambulance request in accordance with NIAS guidance and disseminate among relevant staff. Responsible person – AD and HOS for ED
3. Regional Thrombectomy service Guidance and ad hoc availability is to be shared with all relevant staff. Responsible person – CD and HOS.

**17. INDICATE ANY PROPOSED TRANSFERRABLE REGIONAL LEARNING POINTS FOR CONSIDERATION BY HSCB/PHA:**

The general consensus was to ask for 999 blue light ambulance for emergency transfer to RVH for thrombectomy. It was agreed this was a major learning point for all staff involved and highlighted that there is the potential risk that there are many other medical and nursing staff not only in SHSCT but other Trusts who are potentially unfamiliar with NIAS's Standard Operating Procedures (SOP) for 'time critical' ambulance requests.

**18. FURTHER REVIEW REQUIRED? NO**

Please select as appropriate

If 'YES' complete SECTIONS 4, 5 and 6.

If 'NO' complete SECTION 5 and 6.

| <b>1. ORGANISATION:</b> SHSCT  | <b>2. UNIQUE INCIDENT IDENTIFICATION NO. / REFERENCE:</b> [Personal Information redacted by the USI] |
| <b>3. HSCB UNIQUE IDENTIFICATION NO. / REFERENCE:</b> [Personal Information redacted by the USI] | <b>4. DATE OF INCIDENT/ EVENT:</b> [Personal Information redacted by the USI]                        |
| <b>5. PLEASE INDICATE IF THIS SAI IS INTERFACE RELATED WITH OTHER EXTERNAL ORGANISATIONS:</b> No | <b>6. IF 'YES' TO 5. PLEASE PROVIDE DETAILS:</b>   |

**7. DATE OF SEA MEETING / INCIDENT DEBRIEF:** 11/02/2021, 16/03/2021 & 26/03/2021

#### 8. SUMMARY OF EVENT:

[Personal Information redacted by the USI] was admitted to Daisy Hill Hospital (DHH) on [Personal Information redacted by the USI] with a worsening shortness of breath, lethargy and decreased appetite. A diagnosis of severe Covid-19 pneumonia was made and considering his background medical conditions, including [Personal Information redacted by the USI], his ceiling of care was the High Dependency Unit (HDU).

[Personal Information redacted by the USI] had haemodialysis (using a machine to clean and filter the blood) on [Personal Information redacted by the USI]. On [Personal Information redacted by the USI] he had an unwitnessed fall in the bathroom. At the time the floor was noted to be wet. A CT brain scan showed a traumatic subarachnoid haemorrhage (a life-threatening type of stroke caused by bleeding into the space surrounding the brain). [Personal Information redacted by the USI] was discussed with the Neurosurgery Team but was not for intervention by their team. His condition deteriorated and end of life comfort care was discussed with his family on [Personal Information redacted by the USI] and he was commenced on syringe driver. [Personal Information redacted by the USI] died peacefully on [Personal Information redacted by the USI].

The review team wish to express to [Personal Information redacted by the USI]'s wife and family circle their sincerest condolences on the untimely passing of [Personal Information redacted by the USI].

## 12. WHAT HAPPENED?

Personal Information redacted by the USI was brought by ambulance to DHH ED on Personal Information redacted by the USI arriving at 15:56. He was triaged by Staff Nurse 1 at 16:03 who noted that his presenting complaint was weakness and lethargy. It was documented that he had very low oxygen saturations (SpO<sub>2</sub>) and that he was on a nebuliser whilst in the care of the Northern Ireland Ambulance Service (NIAS) running at 15L/minute. His pulse (P) was 71 beats per minute (normal), respiratory rate (RR) 24 breaths per minute (fast), temperature (T) 36.1°C (normal), SpO<sub>2</sub> 93% (he required the nebuliser to maintain this level) and blood glucose (BM) 5.7 mmol/l (normal). He was seen by Doctor 1 (Senior House Officer (SHO)) and Doctor 2 (Specialty Registrar Emergency Department (ED)). They noted that Personal Information redacted by the USI was a Personal Information redacted by the USI old male who had arrived with shortness of breath and documented that his SpO<sub>2</sub> was 76% on room air (very low). Personal Information redacted by the USI complained of shortness of breath and lethargy for 3 days. Doctor 2 noted that Personal Information redacted by the USI had no temperature or cough, that he had a reduced appetite and that his last bowel movement was 3 days earlier. Doctor 2 also noted that Personal Information redacted by the USI had longstanding lower back pain. Personal Information redacted by the USI denied any chest pain, any palpitations and any abdominal pain.

On examination Personal Information redacted by the USI's heart sounds were I+II (normal), his lungs were clear, abdomen soft and non-tender, bowel sounds were present and his calves were soft and non-tender. The plan was for Personal Information redacted by the USI to have a chest x-ray, as per Covid pathway nebulisers, dexamethasone, oxygen, antibiotics after the chest x-ray, Covid swab and arterial blood gasses (ABG) done.

Personal Information redacted by the USI was then reviewed by Doctor 3 (Locum Consultant Physician) who noted the past medical history and documented that Personal Information redacted by the USI was not clinically well. He advised that Personal Information redacted by the USI's Echocardiogram was not consistent with Heart Failure and that he needed to be managed as a Covid-19 positive patient. Doctor 3 advised that Personal Information redacted by the USI needed to have a troponin test and d-dimers carried out.

Doctor 3 noted that Personal Information redacted by the USI's P/F ratio (is the level of oxygen measured on blood gas in comparison to the level of oxygen patient is breathing in on room air – the lower the score the sicker the patient is) was 8.4. (A P/F Ratio less than 300 indicates acute respiratory failure.) Personal Information redacted by the USI was discussed with Dr 4 (Consultant Physician) who advised there was a high chance of mortality even if Personal Information redacted by the USI went to the Intensive Care Unit (ICU); therefore given his multiple co-morbidities the ceiling of care would be in the High Dependency Unit (HDU).

At 18:45 Personal Information redacted by the USI was reviewed by Doctor 5 (Medical Registrar) and he discussed resuscitation with Personal Information redacted by the USI and his step-daughter. There was an agreement that Cardiopulmonary Resuscitation (CPR) would likely be unsuccessful and therefore not in Personal Information redacted by the USI's best interests and a Do Not Attempt CPR Order was put in place. A Covid swab was taken at this time.

Personal Information redacted by the USI was seen by Doctor 6 (Senior House Officer) as part of the clerk-in process. Doctor 6 noted that Personal Information redacted by the USI's SpO<sub>2</sub> was 76% on room air, that he had shortness of breath and lethargy for 3 days with a decreased appetite. They documented that Personal Information redacted by the USI had no temperature, no cough, his bowels opened 3 days previously and that he was passing urine as normal. His longstanding lower back pain was noted and again Personal Information redacted by the USI denied any chest pain, any palpitations and any abdominal pain. Doctor 6 noted the past medical history to be Personal Information redacted by the USI.

Doctor 6 noted Personal Information redacted by the USI's observations to be RR 26, BP 109/52, SpO<sub>2</sub> 93% on 10L, P 80, T 37.3, and his National Early Warning Score (NEWS - determines the degree of illness of a patient and prompts critical care intervention) was 8. It was noted that Personal Information redacted by the USI's lungs were clear, abdomen soft and non-tender and bowel sounds were present. The plan was for Personal Information redacted by the USI to be treated according to the Covid pathway based on his clinical presentation, have a troponin test and a d-dimer test.

At 02:30 on [Personal Information redacted by the USI], Doctor 7 (Specialty Registrar) was asked to see [Personal Information redacted by the USI] regarding a reduction in his SpO2. On arrival [Personal Information redacted by the USI] did not appear in any respiratory distress and did not have any increased work of breathing. His SpO2 was 86% on venture mask. Doctor 7 noted [Personal Information redacted by the USI]'s past medical history and his presenting complaint. Doctor 7 noted that [Personal Information redacted by the USI]'s SpO2 was fluctuating between 85% to 92% but mostly was 86% average. [Personal Information redacted by the USI] was sleeping but easily rousable and when asked stated he felt alright and had no shortness of breath and did not feel dizzy, drowsy or exhausted. On examination [Personal Information redacted by the USI] had chest crepitations on the left side (all over) and right base. Air entry seemed good all over. His abdomen was soft and non-tender and bowel sounds were present. At one point his SpO2 dropped to 84% and his mask was switched to 15L non-rebreather. His SpO2 gradually improved to 93% and then slowly to 96%. As [Personal Information redacted by the USI] was sleeping it was difficult for Doctor 7 to check if [Personal Information redacted by the USI] was getting drowsy with the increased oxygen so his mask was changed back to the 15L venturi mask. At that point [Personal Information redacted by the USI]'s observations were SpO2 90-91%, BP 129/66, P 54 and T 36.5.

Doctor 7's plan was to continue with the 15L venturi mask and aim for a target of > 90% but >88% was also acceptable unless [Personal Information redacted by the USI] had an increased RR and reduced BP. He was to be stepped down to 10L if his SpO2 was >94% and any concerns were to be escalated. Doctor 7's impression was that [Personal Information redacted by the USI] was currently stable and not for HDU. Hourly observations were recommended.

At 09:00 [Personal Information redacted by the USI] was seen by Doctor 3 and Doctor 8 (Staff Grade) who noted the past medical history and presenting complaint. They noted that [Personal Information redacted by the USI] was for haemodialysis. On examination his lungs were clear and his observations were recorded as RR 18, SpO2 94.7 on 10L, T 36.5, BP 115/60, P 51 and his BM was 8.8. The plan was to discuss [Personal Information redacted by the USI] with the renal team and move him to a side room.

At 10:00 [Personal Information redacted by the USI] was seen by Doctor 9 (Consultant Nephrologist) who noted that [Personal Information redacted by the USI] was feeling well. His temperature was normal, SpO2 92% on 60%, BP 130/58, P 51, his chest was clear and he had no swelling. Doctor 9's plan was to proceed with haemodialysis that afternoon.

At 10:40 [Personal Information redacted by the USI] was seen by Physiotherapist 1. He noted that [Personal Information redacted by the USI] advised he was unsteady when on his feet. Physiotherapist 1 titrated [Personal Information redacted by the USI]'s oxygen and assisted him to sit on the side of the bed and then assisted him to lie on his side. At this point [Personal Information redacted by the USI]'s SpO2 decreased to 73% so his oxygen was increased again and he was left comfortable.

At 16:30 [Personal Information redacted by the USI] had his pre haemodialysis review carried out by Doctor 9 and this commenced at 16:40 and lasted for 1.5 hours.

At 17:08 the result of [Personal Information redacted by the USI]'s Covid swab indicated that he was positive.

On [Personal Information redacted by the USI], [Personal Information redacted by the USI] was seen by physiotherapist 2 at 09:30 when he reported that he felt much improved from the previous day, although he did report feeling fatigued following mobilising to the bathroom earlier and this took him time to recover. [Personal Information redacted by the USI] was alert and sitting in a chair and the plan was to review him the following day to progress his exercise tolerance.

At 10:00 [Personal Information redacted by the USI] was seen by Doctor 9 during the renal ward round. He was noted to be clinically stable and his SpO2 was 92% on 60%. His BP was 130/58. He was also seen by the medical team who noted that he was sitting out in a chair and alert. On examination he had mild crackles in his lungs, heart sounds were normal and he had mild peripheral oedema (swelling). The plan was to continue with Enoxaparin 20mg twice daily, chase D-dimer, daily bloods and liver function test. It was noted that [Personal Information redacted by the USI] was on Dexamethasone 6mg once daily for 10 days and if his oxygenation worsened he was for continuous positive airway pressure (CPAP).

On [Personal Information redacted by the USI], [Personal Information redacted by the USI] was seen by Doctor 10 (Specialty Registrar) and Doctor 11 (Senior House Officer) at 04:00 as it was reported he had an unwitnessed fall. They were advised by nursing staff that [Personal Information redacted by the USI] had gone into the bathroom to urinate, they heard a bang and found [Personal Information redacted by the USI] on the floor, bleeding from the nose with right supra orbital swelling. [Personal Information redacted by the USI] told nursing staff that he was trying to get up from the toilet and could not remember what happened afterwards. He reported that he hurt everywhere, had no chest pain, no seizures and no vomiting. Doctors 10 and 11 noted that [Personal Information redacted by the USI] was able to follow commands and move all 4 limbs. They noted that the floor in the bathroom was wet. A cervical collar was applied and he was transferred back to bed.

On examination [Personal Information redacted by the USI] was alert and his observations were RR 22, BP 97/59, SpO2 92% on 60% 15L and P 66. He had equal air entry bilaterally and his heart sounds were normal. His Glasgow Coma Scale was 15/15. His abdomen was soft and non-tender, he had no spinal tenderness and a full range of movement in all limbs. It was noted that he had minimal bleeding from both nostrils with haematoma. He had right supra orbital swelling, No rhinorrhoea (discharge from the nose) nor any battle sign/racoon eyes.

The plan was for a CT brain and CT cervical spine with neurological observations and pain relief. [Personal Information redacted by the USI] was to have an ECG and venous blood gasses (VBG). His clexane and aspirin were held until the report of the CT brain was available.

Doctor 11 reviewed [Personal Information redacted by the USI] an hour later after returning from the CT scanner. [Personal Information redacted by the USI] denied any chest pain, was slightly short of breath, had no nausea, vomiting and was not in pain. On examination he was sitting in the bed, alert and orientated. His GCS was 15/15 and the power in all limbs was 5/5. His SpO2 was 91% on 15L. The plan was to await the results of the CT brain, continue neurological observations, continue with oxygen and update the family.

At 05:40 Doctor 12 (FY1) received a verbal report from the CT brain which confirmed an Intraparenchymal haemorrhage but it could not completely exclude a fractured cervical spine because of movement artefact. It was advised that if there were clinical signs of fracture [Personal Information redacted by the USI] was to be re-scanned and if not his collar could be removed. [Personal Information redacted by the USI] reported no neck pain but discomfort and on examination there was no visible injury to his neck. There was no spinal tenderness and no paraspinal tenderness. The plan was to remove the collar and contact neurosurgery.

At 06:15 Doctor 12 reviewed [Personal Information redacted by the USI] before discussion with neurosurgery. [Personal Information redacted by the USI] was orientated to place and his GCS was 15/15. His RR was 21, SpO2 94% on 40%, BP 102/60, P 89.

At 06:35 discussions took place with the neurosurgeons when the clinical care and CT scan report was relayed. The neurosurgeons suggested one off tranexamic acid 1g and to stop clexane and aspirin. It was noted that [Personal Information redacted by the USI] was unlikely for neurosurgical intervention considering his co-morbidities and that if he GCS deteriorated he was to be re-scanned and reviewed. They also recommended a discussion with the haematologist which took place at 06:58. Doctor 13 (Consultant Haematologist) agreed with the neurosurgeons plan.

At 07:20 Doctor 11 updated [Personal Information redacted by the USI]'s step-daughter.

At 10:00 [Personal Information redacted by the USI] had a physiotherapy assessment carried out by physiotherapist 3 (Clinical Lead Physiotherapist). [Personal Information redacted by the USI] complained of pain in his right arm. He had reduced air entry at the left base and his breathing pattern was irregular. His SpO2 was fluctuating between 88 - 93% on 60% oxygen and require a medical review. He was seen at 11:51 by Doctor 14 (Specialty Registrar) who noted the history to date. On examination [Personal Information redacted by the USI] was sitting in bed, his GCS was 15/15, and a bruise was noted at his right eye. He had chest crepitations in both lungs and it was noted that he would likely require haemodialysis.

At 12:40 he was seen by Doctor 4 who noted that [Personal Information redacted by the USI]'s breathing is not too laboured at times. His abdomen was soft and non-tender and he had mild oedema in his feet. His GCS was 15/15 and he was not for haemodialysis that day. At 17:40 the results of the VBG were known and noted.

On [Personal Information redacted by the USI] was seen by Doctor 14 at 11:30. On examination he was agitated but orientated and able to follow commands. His GCS was 15/15. He looked dehydrated and was still having pain in his back. His observations were taken and his SpO2 was 96% on 60% oxygen, BP 133/67 and T 35.2. The plan was for an x-ray of his lumbar spine and shortec 2.5mg to help with pain. He was seen by physiotherapist 3 at 12:00 when he had no complaints of pain. His breathing pattern remained irregular and episodes of shallow breathing followed by increased rate/depth of effort. He was repositioned to high sitting and encouraged to breathe deeply.

At 16:20 he was reviewed in relation to increased confusion. He was rousable to speech, denied pain and able to respond to questions. He was groaning with discomfort but able to stand up and walk a few steps. His blood glucose level was 10. He was non-compliant with neurological examination and his GCS was 13/15. At this time he was able to move all 4 limbs, had no slurring of speech, was not clammy, his abdomen was soft and his bladder was palpable. He was discussed with Doctor 14 who advised a further CT brain, bladder scan and to check when his bowels last opened and commence a stool chart.

At 21:00 Doctor 10 was asked to review [Personal Information redacted by the USI] again and follow up on the CT brain. [Personal Information redacted by the USI]'s airway was patent with no added sounds, his RR was 24, SpO2 91% on 60% oxygen, heart sounds normal, P 86, BP 122/82. Atrial fibrillation was noted on telemetry. [Personal Information redacted by the USI]'s hands were warm and he was well perfused. His capillary refill time was less than 2 seconds. There was no sign of any DVT or cellulitis and his fluid intake/output was noted as fluids in 650 ml and out 550 ml.

His abdomen was soft, not peritonitic/guarding and bowel sounds were present. He was draining clear urine. His GCS was 11/15 and his BM was 10.8. Doctor 10 noted [Personal Information redacted by the USI] to be moving all 4 limbs normally, making groaning noises but not answering any questions and was unable to say where he was. He observed that [Personal Information redacted by the USI] kept putting his hand to his ear and was moving his neck by himself. His whole spine was felt and there was no obvious bony tenderness noted. He had no bony hip pain and had been mobilising by himself that day.

Doctor 10's impression was that [Personal Information redacted by the USI] had delirium (multi-factorial) and the plan included regular analgesia, oxycodone 1mg subcutaneously 4 hourly, ensure bowels were opening and to avoid any sedation at present. It was noted that [Personal Information redacted by the USI] should try to keep his oxygen in place and that he would benefit from 1:1 Nursing. This was in place from [Personal Information redacted by the USI] until the morning of [Personal Information redacted by the USI].

On [Personal Information redacted by the USI] at 03:30 Doctor 12 was asked to see [Personal Information redacted by the USI] regarding jerking movements of his limbs, clenched fists and legs and tongue biting. The priority was to maintain [Personal Information redacted by the USI]'s airway with head tilt. His RR was 14, SpO2 96% on 100% oxygen. His lungs were clear, chest clear and he had no increased work of breathing. His P was 69 regular, BP 188/80 which was 113/64 when re-checked. His GCS was 3/15 which improved to 7/15. Doctor 12 noted that it was difficult to assess [Personal Information redacted by the USI]'s level of pain. The plan was that if there was any further seizure activity [Personal Information redacted by the USI] was to be considered for of Keppra (medicine to treat seizures) and that Doctor 12 should be re-contacted if [Personal Information redacted by the USI]'s systolic BP increased over 170 repeatedly.

[Personal Information redacted by the USI] was reviewed at 06:45 by Doctor 15 (SHO) as he was having a seizure which had resolved by the time she arrived. [Personal Information redacted by the USI]'s RR was 16, SpO2 97% on 15L, P 70 and BP 156/79. His GCS was 7/15 and he was not verbally responsive, with his left eye gazing to left side when eyelid lifted and

right eye pointing forward. [Personal Information redacted by the USI] was drowsy post seizure and his arms were floppy. On examination he was moving his legs himself, making groaning sounds and flexed away from pain. The impression was that the seizure was secondary to his bleed. At that time [Personal Information redacted by the USI] was very unwell and he was discussed with Doctor 10 who telephoned [Personal Information redacted by the USI]'s step-daughter at 07:55 to provide an update. [Personal Information redacted by the USI] was then seen by Doctor 16 (Consultant Physician) who advised that [Personal Information redacted by the USI] was not for haemodialysis and that no further bloods should be carried out unless there was a significant improvement. Non-essential medications were stopped and the renal team updated. [Personal Information redacted by the USI] was seen by Doctor 17 (Consultant Nephrologist) at 11:30 who ruled out haemodialysis that day.

On [Personal Information redacted by the USI], [Personal Information redacted by the USI] was reviewed by the palliative care team who noted that he was restless and agitated, groaning to touch/movement and appeared sore on moving. It was noted that [Personal Information redacted by the USI]'s step-daughter had requested use of a syringe driver to prevent fluctuating symptoms so the plan was to keep [Personal Information redacted by the USI] comfortable. He was reviewed at 09:35 by Doctor 16 and again by Doctor 18 at 19:55 when there was a query about the syringe driver.

On [Personal Information redacted by the USI], [Personal Information redacted by the USI] was reviewed by Doctor 3 at 09:08 and the family updated. When seen by the palliative care team at 10:00 they noted a deterioration in [Personal Information redacted by the USI]. [Personal Information redacted by the USI] had sadly died when Doctor 19 (FY1) was called to his bedside at 12:55.

### 13. WHY DID IT HAPPEN?

#### Patient Factors

The review team understand that [Personal Information redacted by the USI] was a spritely gentleman with a good outlook on life. Up until two days before [Personal Information redacted by the USI] was brought to ED at DHH he had been well and independently mobile and did not require any assistance with the activities of daily living. They understand that on the morning of admission [Personal Information redacted by the USI] was so unwell that he required assistance into the ambulance for his transfer. The review team have noted that [Personal Information redacted by the USI] had a past medical history of [Personal Information redacted by the USI]

[Personal Information redacted by the USI] It was noted in the admission documentation that [Personal Information redacted by the USI] had no previous history of falls.

#### Task Characteristics

The review team have identified that on the morning of [Personal Information redacted by the USI], [Personal Information redacted by the USI] was unaided when he went to use the bathroom and there is no recollection of him being on portable oxygen whilst mobilising. The nursing staff who were on duty can recollect that [Personal Information redacted by the USI] greeted them on passing the nurses station and he appeared alert and was wearing appropriate footwear. The review team understand that patients who have low oxygen saturations are more susceptible to falls. On reflection nursing staff involved with the care of [Personal Information redacted by the USI] now fully appreciate the importance of patients who have been diagnosed with Covid-19 being accompanied and using portable oxygen when mobilising.

The review team understands that [Personal Information redacted by the USI] had used the toilet before he fell as he could be heard dispensing toilet paper in the area next to the bathroom. A short time later there was a noise from the bathroom and on investigation a staff nurse found that he had fallen. The staff nurse observed that the floor was wet but could not determine if the liquid was water or urine. The review team have been advised that [Personal Information redacted by the USI] experienced a 1 minute loss of consciousness and he came round again by himself prior to the arrival of the medical team. As part of the assessment and examination Doctor 10 queried if [Personal Information redacted by the USI] had suffered a seizure or if he had been incontinent causing a mechanical fall, but as [Personal Information redacted by the USI] was alert and orientated he ruled out a seizure. Doctor 10 though the fall was more likely to have been as a result of [Personal Information redacted by the USI] being hypoxic (deprived of adequate oxygen supply).

## Training and Education

The review team are aware that in light of the Covid-19 pandemic, the ward on which [Personal Information redacted by the ULS] was nursed had previously been a Surgical Ward and at the time of [Personal Information redacted by the ULS]'s admission nursing staff were caring for medical patients. The review team accept that the nursing staff who were caring for [Personal Information redacted by the ULS] were skilled in and knowledgeable about the management of surgical patients but less so in the management of medical patients. They do understand however that some initial training was provided to nursing staff on the management of Covid-19 patients, but recognise that until the time of [Personal Information redacted by the ULS]'s fall staff did not fully appreciate how quickly these patients can desaturate when mobilising without portable oxygen. The review team have emphasised that at the time of [Personal Information redacted by the ULS]'s admission staff were dealing with a continuing global pandemic and are mindful of the fact that wards were and can continue to be opened at short notice to cater for an increasing demand. In these circumstances these wards need to have an appropriate skill mix of suitably trained staff.

## Environment and Staffing

The review team are aware that Ward 3b is an eighteen bedded ward consisting of two, six bedded bays and six side wards (four of which had ensembles). It was identified that [Personal Information redacted by the ULS] was nursed in sideward 4 and that the closest bathroom to him would have been 5/6 meters away. On the night in question the ward was staffed by three staff nurses and one healthcare assistant. It is noted that two of the staff nurses were core staff and the remaining staff nurse was employed by the Southern Trust Bank and was familiar with the workings of the ward. It was noted that the healthcare assistant was also one of the ward's core staff.

In terms of the acuity of patients being nursed at the time of [Personal Information redacted by the ULS]'s fall, the review team understand there were five confused patients, one of who required all night 1:1 supervision. As a result of this during the shift only one member of staff left the ward for breaks at a time. The review team are satisfied that the ward was adequately staffed.

The review team are mindful that as part of the SAI notification process there was information to report that the bathroom floor was wet, however they could not identify if this contributed to [Personal Information redacted by the ULS]'s fall. The review team discussed this with staff members and it was not clear if the wet floor was due to a running tap (which staff turned off on arrival) or if [Personal Information redacted by the ULS] had been incontinent.

## Policies and Procedures

The review team have noted that [Personal Information redacted by the ULS] received good clinical care which was in line with best practice guidelines. They have noted that [Personal Information redacted by the ULS] was managed on the appropriate falls pathway post falls and that follow up examinations were comprehensive and care was provided without delay.

## Communication and Documentation

The review team have noted that the medical, nursing and allied health professional teams worked well together and had a cohesive approach to [Personal Information redacted by the ULS]'s care. It is recognised that communication with other specialities took place in a timely manner and his case was escalated through the medical management structures appropriately. It is noted that the written documentation contained in [Personal Information redacted by the ULS]'s notes was to a high standard. The review team have also determined that the family were kept fully up to date in relation to [Personal Information redacted by the ULS]'s prognosis and management plan.

**SECTION 3 - LEARNING SUMMARY****14. WHAT HAS BEEN LEARNED:**

The review team have determined that there were two causative factors in [Personal Information redacted by the HSC]’s death, the first being Covid-19 and the second being an intracerebral bleed for which [Personal Information redacted by the HSC] received appropriate treatment and care.

The review team have learned at the time of [Personal Information redacted by the HSC]’s admission there was not an in-depth appreciation of how quickly Covid-19 patients could desaturate whilst mobilising in the absence of portable oxygen.

The Clinical staff involved are now aware of the very rapid speed with which Covid patients can desaturate.

Whilst the outcome for [Personal Information redacted by the HSC] and his family has been devastating the review team feel that the quality of care given to him at admission and after his fall was of a high standard.

**Staff and Family Engagement**

The review team wishes to highlight that the members of staff from whom statements have been taken, as part of this review, have been co-operative and extremely open and honest which the review team have appreciated. The review team wish to note that it is clear from the conversations which have taken place that staff have reflected on this incident, learned from it and put in place a number of changes to their practice with regard to the management of Covid-19 patients.

The review team wish also to highlight the constructive and understanding attitude of [Personal Information redacted by the HSC]’s family throughout the review process and for their patience whilst awaiting production of the report.

**15. WHAT HAS BEEN CHANGED or WHAT WILL CHANGE?**

1. Each ward with Covid patients has now been supplied with a number of rollators which can accommodate portable oxygen cylinders for those patients are deemed fit to be mobilising.
2. In addition for those patients that require oxygen on mobilisation, their requirement is notified on the whiteboard above each patient’s bed.

**16. RECOMMENDATIONS (please state by whom and timescale)**

Each member of the multidisciplinary team involved in caring for patients with Covid should be made aware of:

- (i) the speed with which Covid patients can desaturate during mobilization and
- (ii) the need for oxygen to be available during mobilization and at a level indicated on the whiteboard above each patient’s bed.

This information should be shared via a variety of mechanisms, as follows:

1. The Consultant responsible for [Personal Information redacted by the HSC]’s care will discuss this case and learning from this review at the Medical Morbidity and Mortality Meeting. This should take place within 8 weeks of the report’s publication and should include cascading this learning to all doctors within the Trust.

2. The Ward Sister of the ward Personal Information redacted by the HSC was nursed on will share the experience of staff and the learning from this report at the Joint Sister's (both sites CAH & DHH) meeting. This should take place within 8 weeks of the report's publication and should include cascading this learning to ward level.
3. This report will also be discussed at the Lead Nurse Forum. This should take place within 8 weeks of the report's publication.

**17. INDICATE ANY PROPOSED TRANSFERRABLE REGIONAL LEARNING POINTS FOR CONSIDERATION BY HSCB/PHA:**

The SHSCT's representative on the Regional Falls Prevention Group will provide a summary of this incident and its learning outcomes to the next meeting of group for shared learning.

**18. FURTHER REVIEW REQUIRED? YES / NO**  
Please select as appropriate

If 'YES' complete SECTIONS 4, 5 and 6.

If 'NO' complete SECTION 5 and 6.

**DATE CHECKLIST COMPLETED**<sup>1</sup> Service User or their nominated representative

## Family Engagement; Questions submitted

**Was [Personal Information redacted by the USI] confined to bed before his fall or was he able to get up on his own?**

The review team understand that prior to his fall [Personal Information redacted by the USI] was mobile on the ward and had not been confined to bed.

**Why did the RVH not accept [Personal Information redacted by the USI] for treatment?**

The review team have been advised that following the verbal report of the CT scan Doctor 11 telephoned neurosurgery and that on the basis of [Personal Information redacted by the USI]'s co-morbidities he was not for intervention/surgery as the risk would have been too high. Doctor 11 was advised to treat [Personal Information redacted by the USI] conservatively and administer tranexamic acid to stop his bleed and cease [Personal Information redacted by the USI]'s blood thinning medication to prevent a further bleed.

**Should [Personal Information redacted by the USI] have been allowed to mobilise to the bathroom? Should the nurse have directed him back to bed?**

The review team are sorry that [Personal Information redacted by the USI] mobilised to the bathroom unaided. The Ward Sister has reported that [Personal Information redacted by the USI] appeared to be an able gentleman and was independent. All staff involved have openly acknowledged that they have had a huge learning curve with the management of respiratory patients. The Ward Sister advises that on reflection, and since this incident staff, would be expected to stop any patient who was mobilising without oxygen and return them to their bed space. Staff are regretful that they did not appreciate the effect of a patient desaturating so quickly and if similar circumstances presented themselves now staff would be better equipped to deal with them.

**Did [Personal Information redacted by the USI] lose consciousness?**

It is noted that [Personal Information redacted by the USI] experienced a 1 minute loss of consciousness.

**Are falls mats available and should one have been used?**

The review team understand that falls mats are available, however as [Personal Information redacted by the USI] was mobile the use of one would not have been necessary.

**Had [Personal Information redacted by the USI] been sedated prior to the fall?**

The review team understand that [Personal Information redacted by the USI] had not been sedated.

**Would [Personal Information redacted by the USI] have recovered from his Covid-19 diagnosis if he had not have experienced a fall?**

The review team are advised that it is felt that [Personal Information redacted by the USI]'s Covid was so severe that even if he had not had the fall he would not have survived. It is understood that if a dialysis patient contracted covid-19 they would be at an increased risk of death.

If [Personal Information redacted by the USI] would have had dialysis earlier would it have helped him?

It is the understanding of the review team that Doctor 4 had taken over the care of [Personal Information redacted by the USI] in [Personal Information redacted by the USI] and he had two virtual consultations with him before calling him to clinic in [Personal Information redacted by the USI] when dialysis was discussed. It is noted at that time [Personal Information redacted by the USI]'s eGFR (test to measure level of kidney function and determine stage of kidney disease) was 6 and that this would have been the point for starting a patient on dialysis, however as [Personal Information redacted by the USI] appeared well, and after discussion with [Personal Information redacted by the USI], a decision was made to defer. The review team cannot conclude if dialysis had been started any earlier that the outcome would have been different.

## LEVEL 1 – SIGNIFICANT EVENT AUDIT INCLUDING LEARNING SUMMARY REPORT AND SERVICE USER/FAMILY/CARER ENGAGEMENT CHECKLIST

### SECTION 1

| 7. DATE OF SEA MEETING / INCIDENT DEBRIEF: 20/5/2020                                      |   |
| 8. SUMMARY OF EVENT:  |   |

[Personal Information redacted by the USI] attended CAH ED on the [Personal Information redacted by the USI] following a referral from her GP reporting central abdominal pain radiating into the right iliac fossa area associated with dysuria. A possible diagnosis of appendicitis or urinary tract infection was made by [Personal Information redacted by the USI]'s GP.

In CAH ED blood tests were carried out and a diagnosis of pyelonephritis was made and [Personal Information redacted by the USI] was admitted for treatment for same. On the [Personal Information redacted by the USI], following diagnostic scans a decision was made to precede to an appendectomy and during procedure a perforated appendix was noted.

Post procedure [Personal Information redacted by the USI] became hemodynamically unstable with signs of significant bleeding. [Personal Information redacted by the USI] was taken back to theatre for a laparotomy on the [Personal Information redacted by the USI] and was found to have significant intra peritoneal bleeding arising from her spleen. It was noted [Personal Information redacted by the USI] had a delayed rupture of a splenic haematoma with complete detachment of splenic capsule from the spleen. No obvious laceration of the splenic parenchyma was noted and a splenectomy was carried out.

## 12. WHAT HAPPENED?

On [Personal Information redacted by the USI] at 16:01 [Personal Information redacted] presented to Craigavon Area Hospital (CAH) Emergency Department (ED) following a referral by her GP due to a 2 day history of vomiting and central abdominal pain with tenderness in the right iliac fossa (RIF) area with guarding. A urinalysis dipstick test was positive for leucocytes, ketones and blood. The GP queried appendicitis or urinary tract infection.

At 16:10 [Personal Information redacted] was triaged and [Personal Information redacted]'s observations were noted by nurse 1. Pulse 113bpm, Blood Pressure (BP) 130/79; respiratory rate (RR) 16, Temperature 37.5°C, SpO<sub>2</sub> (oxygen levels) 100%. It was documented [Personal Information redacted] had a pain score of 8 out of 10. [Personal Information redacted] was triaged as a priority 2 i.e. to be seen within 10 minutes.

At 18:40 [Personal Information redacted] was seen by ED Doctor 1. Doctor 1 noted [Personal Information redacted]'s recent history of abdominal pain, vomiting, urinary symptoms, lower back pain and temperature. Doctor 1 noted [Personal Information redacted] had abdominal pain in the left and right side with rebound. The impression was that of a urinary tract infection and the plan was to check ketones, bloods, protein and white cell count (WCC is a marker for inflammation). Bloods were checked and results were noted as WCC 22.7, c reactive protein (CRP) (CRP is a marker for inflammation in the body) 268, Urea & electrolytes (U&E kidney function) was normal, Liver function test was normal. Doctor 1 documented that [Personal Information redacted]'s case was discussed with the medical registrar. Following discussion the plan was to admit [Personal Information redacted] with the possibility of scan in the morning.

On [Personal Information redacted by the USI] at 00:10 [Personal Information redacted] was reviewed by Doctor 2 (CT1 medicine). Doctor 2 noted [Personal Information redacted]'s recent medical history. On examination it was noted [Personal Information redacted] had no loin tenderness and that [Personal Information redacted] had right flank tenderness with no guarding but with rebound. [Personal Information redacted]'s abdomen was otherwise soft with bowel sounds present. Doctor 2 documented [Personal Information redacted] was sore on movement and had no history of urinary tract infections (UTI). Doctor 2 documented a differential diagnosis of a UTI, query pyelonephritis and to rule out appendicitis. Doctor 2 noted [Personal Information redacted]'s blood results and that the urinalysis dipstick test was positive for protein, blood, ketones and leucocytes.

Doctor 2 noted [Personal Information redacted] was not vomiting since admission and was drinking well. Doctor 2 documented that if [Personal Information redacted] was to continue vomiting to prescribe Intravenous fluids (IVF). Doctor 2's plan was to continue with Gentamicin (antibiotic), for a surgical review, an ultrasound scan (USS) of abdomen, paracetamol and one hourly monitoring.

At 01:30 [Personal Information redacted] had a surgical review by doctor 3 (Core Trainee CT1 surgery). Doctor 3 noted [Personal Information redacted]'s history. On examination doctor 3 noted [Personal Information redacted]'s lower abdomen was tender, there was no peritonism, [Personal Information redacted]'s temperature was 38.5°C. Doctor 3 documented his impression was a UTI, that it was very unlikely appendicitis and suggested continuing with intravenous (IV) antibiotics and an USS of the renal tracts. Doctor 3 noted he was happy to review on request.

[Personal Information redacted] was reviewed again on the post take ward round on the [Personal Information redacted by the USI] by Doctor 4 (Consultant Physician). Again [Personal Information redacted]'s history was noted. It was noted [Personal Information redacted]'s temperature was 37.5°C, [Personal Information redacted] had a 3 day history of abdominal pain with dysuria (increased frequency). Doctor 4 noted [Personal Information redacted]'s abdomen was tender suprapubically, and CRP and WCC were increased. [Personal Information redacted]'s pulse was noted to be 105bpm, BP 112/82mmHg and she had a positive urinalysis result. Doctor 4's plan was to continue with Gentamicin, and await MSSU and to chase cultures.

It was noted later by Doctor 5 that [Personal Information redacted] was discussed with the appointments office and was informed there was no USS list that evening, and there were no free rooms/ sonographers. The morning list was full from the previous days back log. Doctor 5 documented to continue with the current plan.

At 17:45 Doctor 6 (Foundation Year Foundation Year 2) was asked to see [redacted] due to severe constant suprapubic pain. Doctor 6 noted [redacted] felt nauseated and had a decreased appetite. Doctor 6 noted [redacted]'s temperature was 37.8°C, she felt warm and appeared slightly confused. On examination [redacted] appeared pale and sweaty and was reluctant to let Doctor 6 examine her due to a tender lower abdomen. Doctor 6 noted bowel sounds were present. [redacted]'s observations were noted; RR 16, SpO<sub>2</sub> 98% on RA; Temp 37.7°C, BP 160/80mmHg, pulse 124bpm. Doctor 6 documented a plan, IV morphine 6mg, IV cyclizine and IV fluids. [redacted] was to have 15 minute observations for 1 hour. Doctor 6 documented he would review [redacted] when her pain settled.

At 19:30 [redacted] was reviewed again by Doctor 7 (Foundation Year FY1). On examination [redacted]'s observations were stable. Doctor 7 noted [redacted]'s abdomen tender throughout with voluntary guarding. Doctor 7 noted [redacted] was alert and reporting that morphine had not helped her pain. Doctor 7 noted a plan to review blood results.

At 20:00 Doctor 7 noted bloods results as follows: Hb 140, WCC 14 (22), PLT 322, CRP 282 (269), amylase 26, Bone profile normal, U&E normal, Liver profile normal, Mg 0.80. Gent <0.4. Doctor 7's plan was to treat with gentamicin and to continue with the current management plan.

On [redacted] the ward round was performed by Dr 8 (Consultant Physician) and noted [redacted]'s pain had improved and [redacted] was passing urine, the plan was to check bloods, continue with antibiotics, paracetamol and to mobilise. Bloods were later recorded as WCC 10.8 and CRP 379.

On the [redacted] at 01:00 [redacted] was reviewed by Doctor 9 (FY1). Doctor 9 noted he was asked to see patient due to abdominal pain and query abdominal distension. Doctor 9 noted [redacted] had vomited twice that day at 15:00 and 20:00. [redacted] had one episode of diarrhoea type 7 stool recorded. Doctor 9 noted previous review by the surgical team who thought it unlikely appendicitis and was subsequently treated for UTI the last 3 days with gentamicin. Doctor 9 noted [redacted]'s WCC had reduced from admission and CRP had increased, MSSU reported no significant growth and that blood cultures were still awaited.

Observations were documented as RR16; BP 115/65mmHg, heart sounds were normal, pulse 106bpm and regular. Doctor 9 noted [redacted]'s abdomen felt firm and tender over suprapubic area, bowel sounds were faint but present. Doctor 9 noted [redacted] had no guarding or rebound tenderness and there was no suspicion for peritonism. Doctor 9 documented he discussed [redacted] with doctor 10 (surgical Senior House Officer). Doctor 10 kindly agreed to review. Doctor 9's plan was for an erect chest x-ray and abdominal x-ray, blood cultures and IV paracetamol if further temperature spike, a surgical review and to commence Tazocin for intra-abdominal sepsis.

Doctor 10, reviewed [redacted] and noted [redacted]'s past medical history and completed a thorough examination. Doctor 10 documented [redacted]'s symptoms were not clinically suggestive of appendicitis at present but noted it would warrant investigation and consideration if [redacted]'s symptoms did not settle, a note was made of [redacted]'s temperature of 38.7°C earlier in the day. Doctor 10's plan was for Tazocin for sepsis cover, IV fluids, ultrasound scan USS and fast for the ward round in the morning.

[redacted] had an abdominal x-ray at 10:26 which reported multiple dilated loops of small bowel suggesting small bowel obstruction.

[redacted] was reviewed on the ward round by Doctor 11 (Consultant Surgeon). [redacted]'s history of abdominal pain was noted. Doctor 11 noted [redacted] was constipated but bowels had moved the previous night. Doctor 11 noted the x-ray result which reported distended small loops of bowel. On examination [redacted]'s abdomen was soft but bloated and tender generally throughout, no guarding was reported. Doctor 11's plan was for a CT abdomen and for [redacted] to be transferred to surgical ward 4 North.

At 13:15 [Personal Information redacted] had a CT abdomen and pelvis. The report concluded the following:

*'Significant inflammatory process in the right iliac fossa and suprapubic region with extra luminal air, in keeping with localised perforation and a small collection. The appearances suggest either perforation of a Meckel's diverticulum or the appendix. A large volume of free inflammatory fluid in the pelvis. Small bowel obstruction'.*

At 15:15 it was noted by the nurse that [Personal Information redacted] was for theatre and that the Doctor 12 (Consultant Surgeon) had spoken to [Personal Information redacted]'s parents.

19:30 [Personal Information redacted] was admitted to theatre for laparotomy.

Doctor 12 performed the surgery. Operation notes documented an inflammatory mass in the lower abdomen with pus and faeces, the appendix was perforated. Pus and faeces were released and sent for O&S, the appendix was immobilised and excised in three pieces, it was documented the appendix was friable and perforated and a wash out with saline was performed.

On [Personal Information redacted by the USI] [Personal Information redacted] was reviewed by Doctor 13 (Consultant Surgeon). Doctor 13 documented [Personal Information redacted] was day 1 post appendectomy; she had no temperature spikes and was feeling better. Doctor 13's plan was to continue with fluids and that she could try a light diet and to continue with Tazocin.

At 10:20 [Personal Information redacted] was reviewed by Doctor 4 (Consultant Physician) on the ward round. Doctor 4 noted the events over the weekend and appendectomy. Doctor 4 noted [Personal Information redacted] felt she was improving and was drinking fluids, Doctor 4 documented care was transferred to surgery.

On the [Personal Information redacted by the USI] [Personal Information redacted] was reviewed during the ward round by Doctor 11 (Consultant Surgeon). Doctor 11 noted [Personal Information redacted]'s temperature spiked during the night and that blood cultures were reported as negative. Doctor 11's plan was to continue eating and drinking, take the drip and catheter out, to increase analgesia and for routine bloods.

Later on [Personal Information redacted by the USI] Doctor 14 (FY 1) was asked by nursing staff to review [Personal Information redacted] as she was feeling unwell with tachycardia (fast pulse). Doctor 14 noted [Personal Information redacted] was alert and responsive; her pulse was reported as 120 bpm, RR 17, oxygen saturations (SpO<sub>2</sub>) 98%, BP 100/50. An electrocardiograph (ECG) reported normal sinus rhythm tachycardia, [Personal Information redacted]'s calves were reported to be soft non tender and no dyspnoea (difficulty breathing) was noted. On abdominal examination [Personal Information redacted] had no guarding or rebound tenderness, there was slight tenderness in the right iliac fossa region near the wound was documented. Doctor 14 noted [Personal Information redacted]'s bowels had not opened since Saturday and that she was complaining of fullness and needed to pass wind but was unable to do so. It was noted [Personal Information redacted] felt nauseated earlier but not currently. Dr 14 noted [Personal Information redacted]'s recent bloods results and recent abdominal x-ray result reporting multiple dilated small bowel.

At 18:10 Doctor 15 (CT2 medicine) documented a cardiac arrest call was made. On arrival [Personal Information redacted] was sitting in the chair alert and talking. Doctor 15 noted [Personal Information redacted] looked pale and that she complained of abdominal pain. On examination observations were noted: oxygen saturations 93% room air; BP 78/58mmHg; pulse 160bpm. Doctor 15 noted [Personal Information redacted] had not arrested, she was in bed, stood up and blacked out. Doctor 15 documented [Personal Information redacted]'s airway was patent, her chest was clear, heart sounds were normal, capillary refill time (CRT) was 3 seconds, calves were soft non tender; GCS score was 15/15, it was documented the wound was satisfactory with no ooze, there was mild tenderness and bowel sounds were minimal. Doctor 14's plan was for oxygen therapy, bloods to include full blood picture;

kidney function, CRP, magnesium; to call the surgical team, IVF over one hour and repeat observations every 15mins.

At 18:10 [Personal Information redacted] was reviewed by general surgical Doctor 16 (Core Trainee CT2). Doctor 16 documented he was asked to see [Personal Information redacted] due to a blackout episode. It was documented [Personal Information redacted] was day 2 mini laparotomy for a perforated gangrenous appendix with pus and faeculent material in the abdomen. Doctor 15 noted [Personal Information redacted]'s medical history and admission to hospital. Doctor 15 noted [Personal Information redacted] had no chest pain or palpitations and that she complained of lower abdominal pain in the left side and around the wound. [Personal Information redacted] had no feverish symptoms. Observations were documented as BP 70/50 increasing to 110/70, pulse 130bpm reducing to 110bpm, temp 36.5°C, SpO<sub>2</sub> 100% on 2 litres of oxygen and RR 16. On examination Doctor 16 documented [Personal Information redacted] was tender around the wound and left side, her abdomen was slightly distended. Doctor 16 documented his impression was a vasovagal syncope secondary to current infection and recent surgery. Doctor 16 queried if [Personal Information redacted] was developing a collection. Doctor 16's plan was for IVF, repeat bloods, to continue with Tazocin and possibly add atypical cover. Doctor 16 would discuss [Personal Information redacted] with consultant surgeon Doctor 11 regarding USS in the morning.

At 20:25 Doctor 17 was asked to review [Personal Information redacted] by nursing staff. Doctor 17 documented [Personal Information redacted]'s vasovagal episode earlier, observations were noted pulse 116bpm; BP 111/70 and that [Personal Information redacted] had no further temperature spike that day. On examination it was documented [Personal Information redacted] looked pale, her abdomen was soft with mild tenderness to the left side and she was slightly nauseated. Doctor 17 documented [Personal Information redacted]'s recent bloods taken at 18:00, CRP was down to 336, haemoglobin down to 84 from 110, WCC increased 19.5 and platelets were 448. Doctor 17 documented an impression of vasovagal episode secondary to post op bleed (day 2 post op). Doctor 17's plan was to transfuse 2 units of blood, if [Personal Information redacted] was to remain hypotensive or tachycardia she would require a CT scan that night. Haemoglobin was to be checked early the following morning and observations to be checked regularly. Doctor 17 documented [Personal Information redacted]'s mother and father were informed of the possibility of a post operation bleed and documented they confirmed they were happy to transfuse tonight and CT scan tomorrow.

[Personal Information redacted] was reviewed again at 22:00 by Doctor 17 who noted [Personal Information redacted]'s recent haemoglobin result 67g/dl. Doctor 17 documented [Personal Information redacted] had 2 units of packed red cells (PRC) transfused and remained tachycardia and pale looking. Doctor 17 documented his impression was likely bleeding and that [Personal Information redacted] needed to return to theatre. Doctor 17 discussed [Personal Information redacted] with on call consultant surgeon Doctor 18. Doctor 18 advised that [Personal Information redacted] needed to return to theatre that night and that the CT scan would be of no value as it was likely post operation bleeding. Arrangements were made for [Personal Information redacted] to return to theatre for an exploration laparotomy and consent was obtained for same. A further 2 units of PRC were transfused prior to laparotomy.

The surgery was performed by Doctor 18 (Consultant Surgeon). Theatre notes documented there was a large amount of blood around the spleen, the capsule of the spleen was detached. The findings were in keeping with a delayed rupture of splenic haematoma. There was no significant deep splenic laceration seen. In view of ongoing bleeding the spleen could not be preserved. There was evidence of pelvic phlegmon (inflammation of soft tissue) involving the sigmoid, bladder, uterus and ileum. It was noted the bladder was tensely attached to the abdominal wall and that led to a small perforation which was repaired. [Personal Information redacted] was transferred to Intensive care unit (ICU) following surgery.

On the morning of the [Personal Information redacted by the USI] [Personal Information redacted] was extubated and reviewed post op by Dr 19 Consultant Intensivist. Dr 19 noted [Personal Information redacted]'s past medical history and recent surgeries. [Personal Information redacted]'s GCS score was noted

as 15/15 and that she was on no sedation or inotropes. Arrangements were made for [Personal Information redacted] to transfer to the ward. The plan was for [Personal Information redacted] to stay on Tazocin and to be prescribed further antibiotic cover and vaccinations due to splenectomy. The surgical team to be contacted regarding eating and drinking and the catheter to remain insitu for 2 weeks.

[Personal Information redacted] recovered on the ward post splenectomy and was discharged home on [Personal Information redacted by the USI] with arrangements for an outpatient gynaecology review for mid cycle bleeding, her catheter was to be removed on the [Personal Information redacted by the USI], suture removal in 10 days and an outpatient surgical review in 2 – 3 months. [Personal Information redacted]'s GP was to continue monitoring platelet and haemoglobin levels and review treatment for same.

## SECTION 3 - LEARNING SUMMARY

### 13. Why did it happen?

[Personal Information redacted] was a [Personal Information redacted by the USI] old female at the time when she was referred to CAH ED by her GP on the [Personal Information redacted by the USI]. The review team acknowledge the GP referral letter documented a positive urine dipstick analysis taken at the GP surgery reported positive for leucocytes and ketones/blood. The GP reported [Personal Information redacted] was tender in the RIF area with rebound and had queried if [Personal Information redacted] had appendicitis or a urinary tract infection (UTI). The review team considered the GP's assessment referral was appropriate.

The review team acknowledge [Personal Information redacted] was appropriately triaged within 9 minutes of arrival as a priority 2 (to be seen with 10mins) as per Manchester Triage guidelines. ED Doctor 1 reviewed [Personal Information redacted] and completed a full medical review and assessment. The review team note Doctor 1 documented [Personal Information redacted] had urinary symptoms with a positive urinalysis for ketones, blood, protein and leucocytes, and blood results reported an increased WCC and CRP. A urine sample was sent to microbiology for further analysis. The review team accept there can be a wide presentation of symptoms and signs in patients presenting with appendicitis and ultimately it can be very difficult to make a diagnosis. However, central abdominal pain, vomiting and tenderness in RIF area are classical appendicitis symptoms. A high index of suspicion therefore should be maintained and in this particular case the migratory nature of the pain, elevated temperature with raised inflammatory markers should have pointed consideration towards a surgical admission or surgical review. The review team confirm Doctor 1 appropriately covered [Personal Information redacted] for sepsis prescribing IV Gentamycin (anti-biotic) which was administered prior to [Personal Information redacted]'s transfer to the ward.

The review team are conscious sepsis is a medical emergency. The review team acknowledge [Personal Information redacted] was admitted to the ward and treated for a suspected UTI/ pyelonephritis with IV Gentamycin. The review team note a MSU sample was sent to microbiology for confirmation of UTI/pyelonephritis. The review team acknowledge nursing and medical notes document [Personal Information redacted]'s symptoms worsened over the next couple of days. The review team confirm [Personal Information redacted] had 2 normal MSU results available from [Personal Information redacted by the USI] at 11:24 which excluded a UTI/ pyelonephritis diagnosis. Medical notes evidence [Personal Information redacted] was reviewed multiple times by numerous doctors and there was no consideration given for the normal MSU result. The review team determined the reported MSU result available on [Personal Information redacted by the USI] warranted a change in the management plan and for an earlier consideration of appendicitis.

The review team note Doctor 9 (FY1) was asked to review [Personal Information redacted] on [Personal Information redacted by the USI] at 1:00. The review team acknowledge Doctor 9 completed a thorough history and examination. Doctor 9 noted [Personal Information redacted]'s previous surgical review on [Personal Information redacted by the USI] who advised appendicitis was unlikely. The review team acknowledge Doctor 9 noted [Personal Information redacted]'s WCC had reduced but incorrectly reported [Personal Information redacted]'s MSSU reported no significant growth. Doctor 9 appropriately discussed [Personal Information redacted] with Doctor 10 who agreed to review [Personal Information redacted]. The review team confirm Tazocin was correctly prescribed to cover intra – abdominal sepsis, a chest x ray, abdominal x ray and a surgical review were appropriately requested. Doctor 10 reviewed [Personal Information redacted] and again completed a thorough history and examination. Recent bloods were considered but again the review team note there was no documentation to indicate the MSU result was reviewed. The review team note Doctor 10 documented [Personal Information redacted] symptoms were not clinically very suggestive of appendicitis at the time but documented it would warrant investigation and consideration for laparoscopy if not settling. Tazocin was prescribed to cover sepsis, IV fluids, USS and [Personal Information redacted] was too fast for the ward round in preparation of the possibility of surgery.

The review team acknowledge there was an absence of continuity in [Personal Information redacted]'s care. [Personal Information redacted] was reviewed multiple times by various doctors for the first 3 days. On each occasion consideration was not given for the normal MSU result and failed recognition of [Personal Information redacted]'s worsening clinical symptoms which were suggestive of appendicitis. The review team are mindful a diagnosis of appendicitis was not made until 3 days after her admission following the CT scan report on [Personal Information redacted by the USI] at 13:49 which confirmed a perforated appendix or Meckel's diverticulum. The review team can confirm [Personal Information redacted]

was given high importance on the emergency theatre waiting list that day, theatre staff sent for at 18:33 and surgery was commenced at 19:23.

The review team reviewed the theatre operation notes by Doctor 12 on [Personal Information redacted by the USI] and confirm a lower mid-line laparotomy was performed which confirmed a perforated gangrenous appendix. The review team confirmed that this is an acceptable approach when dealing with a presumed difficult perforated appendix with generalised tenderness. The review team conclude a lower midline laparotomy offers good access to the pelvis to perform a difficult appendectomy and thorough wash out. The review team note there were no documented issues with the procedure and samples were appropriately taken for histopathology. The review team can confirm histopathology results confirmed acute perforated necrotic appendicitis. The review team confirm microbiology testing from an intraabdominal swab taken at the time of surgery confirmed coliforms present and Gentamycin (commenced on [Personal Information redacted by the USI]) was the appropriate treatment.

The review team note that following appendectomy it was reported during the ward round on the morning of the [Personal Information redacted by the USI] that [Personal Information redacted by the USI] felt she was improving. On the [Personal Information redacted by the USI] the review team note it was documented that [Personal Information redacted by the USI] had a temperature spike post laparotomy and determined this can sometimes be a typical response following a laparotomy for a perforated appendicitis. Haematological investigations were appropriately requested and [Personal Information redacted by the USI] was able to eat and drink. It was documented [Personal Information redacted by the USI]'s WCC was elevated which again the review team determined would be understandable after a perforated appendix and laparotomy. It was documented [Personal Information redacted by the USI] had no peritonism on examination. The review team are conscious [Personal Information redacted by the USI] became tachycardia and hypotensive and had a syncope episode and was again reviewed by the surgical team. In hindsight the review team acknowledge [Personal Information redacted by the USI]'s symptoms and syncope episode was probably due to haemorrhagic shock. The review team are conscious [Personal Information redacted by the USI]'s symptoms (tachycardia, feeling unwell) were not unusual following a ruptured gangrenous appendectomy and therefore consideration was not given until later in the evening for a post operation bleed. The review team acknowledge Doctor 16's decision at 22:00 to proceed to an explorative laparotomy without CT imaging was appropriate considering [Personal Information redacted by the USI] had significantly deteriorated.

The review team are aware intraabdominal sepsis is a medical emergency. The review team determined [Personal Information redacted by the USI] presented to CAH ED with symptoms of a possible UTI/ appendicitis. However the review team note medical staff did not review the MSU result which was available on [Personal Information redacted by the USI] at 11:24. On two occasions it was noted [Personal Information redacted by the USI] had rebound pain, there was no loin pain documented which is usually a classical symptom of Pyelonephritis. [Personal Information redacted by the USI] was reviewed by a number of doctors who did not consider a change in diagnosis despite [Personal Information redacted by the USI]'s worsening of symptoms. The review team determined there was enough information and clinical suspicion to warrant an earlier follow up review by the surgical team or escalation to more senior doctor to reassess and reconsider diagnosis due to [Personal Information redacted by the USI]'s worsening symptoms despite treatment. The review team are conscious [Personal Information redacted by the USI] had an emergency appendectomy 3 days after admission. The review team determined the MSU result and [Personal Information redacted by the USI]'s worsening symptoms should have warranted an earlier change to [Personal Information redacted by the USI]'s management plan and consideration for appendicitis.

The review team acknowledge there were no significant symptoms for 24 -36 hours post appendectomy. [Personal Information redacted by the USI] however deteriorated with a temperature spike, tachycardia and hypotension and subsequently had a syncope episode. [Personal Information redacted by the USI]'s symptoms of tachycardia, paleness and fainting

were symptoms consistent with shock and consideration should have been given earlier for a CT scan to rule out a post-operative bleed.

The review team reviewed the consultant surgeon's theatre operation notes of the [Personal Information redacted by the UoI] and noted the operative findings documented there was a large amount of blood around the spleen, the capsule of the spleen was detached, and these findings were documented to be in keeping with a delayed rupture of a splenic haematoma. There was ongoing bleeding noted from the spleen and a splenectomy had to be performed as the spleen could not be preserved. The review team determined the initial laparotomy performed on [Personal Information redacted by the UoI] used a lower midline incision to gain access to the abdominal cavity; the appendectomy was performed in a site distant from the spleen. A possible operative cause for a splenic haematoma may have happened during the washout of the abdominal cavity at the end of the procedure when suction may have been used to wash out the abdominal cavity.

#### 14. What has been learned?

The review team determined earlier consideration should have been given for appendicitis in this case. Due to [Personal Information redacted by the UoI]'s worsening symptoms despite treatment for UTI / Pyelonephritis an appendicitis diagnosis should have been re-considered earlier. Following a mini-laparotomy [Personal Information redacted by the UoI] deteriorated and symptoms warranted earlier consideration for post-operative bleed.

#### 15. WHAT HAS BEEN CHANGED or WHAT WILL CHANGE?

If a patient is admitted with a possible diagnosis of a UTI and subsequently the MSU returns with negative result this should prompt an immediate review and raise the possibility of appendicitis as an underlying cause.

Whilst the actual cause of the splenic haematoma may never be identified in this particular case. Great care should be taken during laparotomy to avoid occult splenic injury especially when performing a wash out of the abdominal cavity at the end of the procedure.

#### 16. RECOMMENDATIONS (please state by whom and timescale)

1. In patients presenting with a possible diagnosis of a query UTI or appendicitis a surgical review should be made in the ED, if admission is required it would be more appropriate for such patients to be admitted surgically.  
If a patient is admitted medically and there is a clinical suspicion of appendicitis daily surgical review should occur, recording patient details on the surgical handover sheet would enable this daily review. Actioned by: AD/ CD surgery
2. The report will be shared with staff involved for reflection and learning. Actioned by HOS for ED/Medicine/ Surgery.

3. The report will be presented at the ED, Surgical and Medical Morbidity & Mortality (M&M) meeting for learning. Actioned by: Acute Governance team to share report with M&M chairs.

| 16 | Audit of the perioperative management of anaemia in children undergoing elective surgery, NHS Blood and Transplant |                     |                     |                             | <p>The NHS Blood and Transplant have indicated that in April 2020 they will be looking at an audit on the management of anaemia in children who are admitted for elective surgery. This audit will be undertaken by anaesthetists. They have not yet started to recruit, because the audit is still in its pilot stage. They will let Trusts know when an anaesthetist has signed up for the audit, or if an anaesthetist has not signed up they would like the Trust to identify one of this team.</p> <p>A REVIEW OF THE 2020/21 AUDIT PROGRAMME - In light of COVID-19, the Project Group has decided to postpone the audit of the perioperative management of anaemia in children undergoing elective surgery until early summer, so I will keep you advised about progress with that. Similarly, we were planning a short survey to look at the use of FFP, Cryo and PCC, but that, too, may be placed on hold. Pending resumption of those audits, we will continue to process data for and report the outstanding 3 audits.</p> | Email has been sent to Dr Scullion and Mr Carroll and Mrs P Watt on 6/3/2020 for awareness. Update from NHS Blood and Transplant   |
| 17 | NG 29 Annual Surveillance audit  | All                 | Mrs F Davidson      | Audit postponed to 1/4/2021 | <p>A submission regarding the Innovative NG 29 Annual Surveillance audit was forwarded to RQIA for their consideration. Rationale for the audit: The DHSSPSNI endorsed the NICE guidance (NG 29) for intravenous fluid therapy in children and young persons. As part of the SHSCT's accountability responsibilities for Standards and Guidelines (S&amp;G), all of the guideline's 32 recommendations have been reviewed.</p> <p>The outcome has provided a scoping specification of the evidence that would demonstrate that effective systems and processes are in place to ensure the NG 29 Guidance is met.</p> <p>Referenced in Item 1 above also.</p> <p>Meeting to be held with RQIA prior to commencement of the audit.</p>   | <p>The audit, co-project lead and Mr Haffey attended a meeting with RQIA on 20/1/20 with members of the funding allocation panel to discuss the application. Notification has been received that RQIA have approved the NG29 project proposal for an annual surveillance audit.</p> <p>Postponement of audit as discussed with RQIA to 01/04/2021.</p> <p>Meeting to be held with RQIA</p> |

| 26 | Morbidity and Mortality meetings | All                 |                     |          | <p>CMO letter on Coronavirus COVID 19 - reducing Mortality and Morbidity review advised the following:</p> <ol style="list-style-type: none"> <li>1. All deaths in hospital should continue to be recorded on RM&amp;MRS. This is important as the Medical Certificate of Cause of Death (MCCD) needs to be printed from that system.</li> <li>2. Where possible, the MCCD should continue to be reviewed by a consultant as is currently the case. This is particularly true of those cases where COVID-19 is a suspected contributor.</li> <li>3. M&amp;M meetings should no longer be held to review all deaths occurring in hospital. Instead, Trusts will be given flexibility to determine what deaths should be reviewed and are asked to undertake a risk-based approach. This may mean that only those deaths which are related to COVID-19 or those deaths where potential harm has been caused will be reviewed. It is also understood that any such review will not take the form of a normal M&amp;M review but may be a much more high-level review.</li> </ol> <p><b>Update received from Chief Executive on 25/6/2020 regarding Morbidity and Mortality reviews for adult deaths in hospital</b></p> <ul style="list-style-type: none"> <li>• The CMO has requested that Trusts recommence M&amp;M reviews for all adult deaths using the RM&amp;MRS from 1 July 2020 and this has been shared with the M&amp;M Chairs on 26/6/2020. Additional consideration is also requested, 'I would ask that when conducting M&amp;M reviews, that consideration is given to whether COVID-19 had a direct or indirect impact on the death, reflecting on, for example, whether a delayed referral to hospital or non-accidental injury may have been a factor in the death. This information will be extremely helpful for any future considerations and plans'.</li> <li>• Difficulty for new Locum appointments completing death certificate on NIECR. These new appointments require to be added to their respective M&amp;M team on NIECR. M&amp;M facilitators to be advised of new starts.</li> </ul> |  |

## Acute directorate (including ATICS): Paediatric IV fluid audit improvement tool (PIVFAIT) Results 1<sup>st</sup> May 2018- 21<sup>st</sup> March 2021<sup>1</sup>

The Acute Directorate Paediatric IV Fluid Audit Improvement Tool (PIVFAIT) assesses 9 indicators / questions for all patients aged 14-15 years who received IV fluids during their hospital admission.

The 9 indicators / questions are:

| Indicator / Question |   | Details  |
|----------------------|---|--|
| 1                    | <b>Patient identification</b>                                   | Are ALL the following <b>patient identifiers</b> provided on both sides of the DFBC?<br>1. Full Name<br>2. Date of birth<br>3. Hospital number   |
| 2                    | <b>Glucose Monitoring</b>                                       | While the child is receiving IV fluids, is there a <b>Blood Glucose result</b> recorded on the DFBC (in accordance with the 2017 Paediatric Therapy Wallchart) i.e. at least 12 hourly?  |
| 3                    |   | Were ALL <b>Blood Glucose</b> measurements greater than 3mmol/L?<br>If answer = No; Enter Hospital Number of those below 3mmol/L for Trust audit dept. to check for treatment.   |
| 4                    | <b>Cumulative input and output totalling and fluid balance.</b> | Are ALL of the following amounts (in mls) recorded on the DFBC?<br>1. Oral/IV amounts, (all administered types of intake to be recorded).<br>2. Day and night totals.<br>3. Grand Total IN<br>4. Grand Total OUT<br>5. 24 hour Fluid Balance                                     |
| 5                    | <b>Patient weight</b>   | Is there a patient weight in kgs, given on the DFBC?   |
| 6                    | <b>DFBC calculation guidance completed.</b>                     | Are the appropriate calculation guidance sections for the IV therapy completed?  |
| 7                    |   | Are there coded indications for the fluid administration provided?   |
| 8                    | <b>Electrolyte monitoring</b>                                   | Is there an E&U result recorded on the DFBC, (in accordance with the 2017 Paediatric Therapy Wallchart)?   |
| 9                    | <b>12 hour assessment.</b>                                      | When IV fluids are administered for longer than 12 hours.<br>Is there a 12 hour Reassessment box* appropriately completed on the DFBC with an answer to the question: Is the infusion prescription still suitable - followed by a doctors signature?<br>* Can be 10 - 14 hours . |

### **Acute Directorate PIVFAIT OUTCOME**

18 of the 51 FB charts (35%) recorded 100% PIVFAIT compliance in the last 32 months.

<sup>1</sup> Audit data is based on returns made by wards at this date.

## Appendix 1

The bar chart and table show that 4 of the 11 Charts audited since Nov 19 has had full compliance.

| Question Compliance  | May 18 | Ju 18 | July 18 | Aug 18 | Sept 18 | Oct 18 | Nov 18 | Dec 18 | Jan 19 | Feb 19 | Mar 19 | Apr 19 | May 19 | Jun 19 | Jul 19 | Aug 19 | Sept 19 | Oct 19 | Nov 19 | Dec 19 | Jan 20 | Feb 20 | Mar 20 | Apr 20 | May 20 | Jun 20 | Jul 20 | Aug 20 | Sep 20 | Oct 20 | Nov 20 | Dec 20 | Jan 21 | Feb 21 | Mar 21 |
|--|--------|-------|---------|--------|---------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|---------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
| 1. **Appendix 1**

Acute Directorate: ATICS: Paediatric IV fluid audit improvement tool (PIVFAIT)  
Results 31<sup>st</sup> May 2019 – 21<sup>st</sup> March 2021

The Acute Directorate ATICS specific audit tool assesses 6 indicators / questions for all patients up to their 16<sup>th</sup> birthday who received IV fluids whilst in theatre.

The 6 indicators / questions are:

| <b>Indicator / Question</b>   |   | <b>Details</b>  |
|-------------------------------|---|---|
| 1                             | <b>Patient identification</b>                       | Are ALL the following <b>patient identifiers</b> provided on both sides of the DFBC?<br>1. Full Name<br>2. Date of birth<br>3. Hospital number  |
| 2                             | <b>Patient weight</b>                               | Is there a patient weight in kgs, given on the DFBC?  |
| 3                             | <b>Daily Fluid Balance &amp; Prescription Chart</b> | Was the appropriate Daily Fluid Balance & Prescription Chart (Child up to 16th Birthday February 2017) chart commenced?   |
| 4                             | <b>Daily Fluid Balance &amp; Prescription Chart</b> | Was the fluid volume given in Theatre / Recovery appropriately transferred onto the ward fluid balance chart prior to discharge from Theatre/Recovery   |
| 5                             | <b>Daily Fluid Balance &amp; Prescription Chart</b> | If Fluids continue on to ward – were calculations done and coded?   |
| 6                             | <b>Fluids prescribed</b>                            | IF fluids were given in Theatre / Recovery please provide details<br>A) Volume prescribed.<br>B) Actual volume given.<br>C) Type of fluid given   |
| <b>Additional information</b> |   |   |
|                               |   |   |
|                               | <b>Fluids prescribed</b>                            | Did IV fluids continue when the patient was discharged to the ward on discharge from theatre/recovery? - Please note if the child continues to receive IV fluids outside the Theatre / Anaesthetics setting then the Ward is to complete the full audit |

NB: 1 x ATICS cases in the period up to 21/03/2021 remain to be audited.

## Appendix 1

58 of the 78 DFB charts (74%) recorded 100% ATICS Specific PIVFAIT compliance. 1 case await ATICS PIVFAIT review

The bar chart and table show that 24/28 charts audited since May 2020 have had full compliance.

| Indicator / % Compliance by Month  | May 19 (n=3) | Jun 19 (n=4) | July 19 (n=4) | Aug 19 (n=4) | Sept 19 (n=4) | Oct 19 (n=6) | Nov 19 (n=5) | Dec 19 (n=2) | Jan 20 (n=4) | Feb 20 (n=3) | March 20 (n=3) | April 20 (n=2) | May 20 (n=6) | Jun 20 (n=8) | Jul 20 (n=8) | Aug 20 (n=3) | Sep 20 (n=3) | Oct 20 (n=2) | Nov 20 (n=3) | Dec 20 (n=0) | Jan 21 (n=0) | Feb 21 (n=1) | Mar 21 (n=1) |
|--|--------------|--------------|---------------|--------------|---------------|--------------|--------------|--------------|--------------|--------------|----------------|----------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|

# MANAGING FRAILTY AND DELAYED TRANSFERS OF CARE IN ACUTE SETTINGS

## GUIDANCE NOTES FOR THE SERVICE USER AUDIT 2019

This document provides guidance on completing the service user audit element of the managing frailty and delayed transfers of care in acute settings benchmarking project.

- Trusts/UHBs are requested to select one care of older people ward or medical ward for the service user audit.
- 50 consecutive discharges should be selected for the service user audit, running simultaneously with the main data collection period (15th July to 27th September 2019).
- A project lead should be allocated on the ward to co-ordinate and collate the results and use the information to complete the service user audit data collation tab on this workbook.

### INSTRUCTIONS

- 1 The service user audit should be completed on the excel spreadsheet on the next tab.  
There is a printable version of the questions available in this workbook to assist with data collection on the ward
- 2 The care of older people ward should complete the service user audit for 50 consecutive service users who are discharged from the ward.
- 3 The service user audit should be completed on discharge from the care of older people's ward.
- 4 The definitions of the questions asked in the service user audit are available on the following tab.
- 5 The data collection period is from 15th July to 27th September 2019. The service user audit may be completed at any time during this period.  
It is suggested that the data is collected on the printable versions of the service user audit and then the results entered onto the excel spreadsheet once 50 consecutive discharges have been reached.
- 6 Please return the completed excel spreadsheet to Personal Information redacted by the USI
- 7 If you need any further help with any aspect of the older people in acute settings service user audit, please e-mail Personal Information redacted by the USI or call Personal Information redacted by the USI

Please return this sheet to Personal Information redacted by the USI by 27th September 2019

MANAGING FRAILTY AND DELAYED TRANSFERS OF CARE IN ACUTE SETTINGS - SERVICE USER AUDIT DATA COLLECTION TEMPLATE

This service user audit is part of the project looking at "Managing frailty and delayed transfers of care in acute settings". For any queries on the data collection please contact Personal Information redacted by the USI

The below 11 questions should be completed on up to 50 consecutive discharges on one care of older people ward within your Trust/Health Board between 15th July and 27th September 2019

To support the completion of the service user audit, a printable sheet which can be used to collect data on the ward is available on the next tab.  
Please use this sheet to collate data manually for the service user audit prior to submitting your data via e-mail.  
All data for the service user audit must be submitted on this excel spreadsheet and e-mailed to Personal Information redacted by the USI once data has been recorded for 50 service users discharged from the care of older people ward  
If you have any queries, please e-mail Personal Information redacted by the USI

No patient identifiable information should be submitted

Name of Trust/UHB/Hospital site:

Name of care of older people ward / medical ward:

Contact details (e-mail address) of contact for the service user audit data collection:

| Question        | 1. Age of service user | 2. What was the primary ICD-10 code that the service user was admitted with? (If ICD-10 code not in the list please select 'other')  | 3. Has this service user been diagnosed with Dementia?  | 4. What are the service user's normal living arrangements?   | 5. Has this service user had a hospital admission within the previous 12 months? | 6. Has this service user had an emergency hospital re-admission within the last 30 days? | 7. At what point in the pathway was CGA delivered to this service user?  | 8. What was the length of stay in days for this service user?                      | 9. Was this patient a delayed transfer of care?  | 10. How many days was this patient delayed?   | 11. Where was this service user discharged to?  |

# NHS Benchmarking Network - MANAGING FRAILTY AND DToCS IN ACUTE SETTINGS

## SERVICE USER AUDIT 2019

This sheet may be used to collect individual data on the designated care of older people ward.

This printable sheet is to assist local data collection only. Do not submit the individual sheets

Please transfer data collected to the collation excel template for submission to us.

If you have any queries please contact Personal Information redacted by the USI or Personal Information redacted by the USI

No patient identifiable information should be noted on this sheet

Please complete for 50 consecutive patients discharged from **one** care of older people inpatient ward in the Trust/Health Board

1 Age of the service user (years)

2 What was the primary ICD-10 code that the service user was admitted with? (If ICD-10 code not in the list please select 'other')

| Code                    | Admitting reason   | Tick one |
|-------------------------|--|----------|
| E46                     | Unspecified protein-energy malnutrition                              |          |
| F00, F01, F02, F03, F05 | Dementia in Alzheimer's disease                                      |          |
|                         | Vascular dementia  |          |
|                         | Dementia in other diseases classified elsewhere                      |          |
|                         | Delirium due to known physiological condition                        |          |
| R15                     | Faecal incontinence  |          |
| R26.2 & R26.8           | Difficulty in walking, not elsewhere classified                      |          |
|                         | Other and unspecified abnormalities of gait and mobility             |          |
| R32                     | Unspecified urinary incontinence                                     |          |
| R40                     | Somnolence, stupor and coma  |          |
| R41                     | Other symptoms and signs involving cognitive functions and awareness |          |
| R46.0                   | Very low level of personal hygiene                                   |          |
| R54                     | Senility   |          |
| W00-W19                 | Falls  |          |
| Z73.9                   | Problem related to life-management difficulty, unspecified           |          |
| Z74                     | Problems related to care-provider dependency                         |          |
| Z99.3                   | Dependence on wheelchair   |          |
|                         | Other  |          |

3 Has the service user been diagnosed with dementia?

|                       | Tick one |
|-----------------------|----------|
| Mild dementia         |          |
| Moderate or mid-stage |          |
| Severe or late stage  |          |
| Terminal              |          |
| No diagnosis          |          |

4 What are the service user's normal living arrangements?

|          | Tick one |
|----------|----------|
| Own home |          |

|                   |  |
|-------------------|--|
| Residential home  |  |
| Nursing home      |  |
| Sheltered Housing |  |
| Unknown           |  |
| Other             |  |

5 Has this service user had a hospital admission within the previous 12 months?

(Circle one)

Yes / No

6 Has this service user had an emergency hospital re-admission within the last 30 days?  
(if this current episode is a re-admission please select Yes)

Yes / No

7 At what point in the pathway was CGA delivered to this service user?

|                               | Tick one |
|-------------------------------|----------|
| In the community/primary care |          |
| A&E                           |          |
| Assessment unit               |          |
| Inpatient ward                |          |
| CGA not delivered             |          |

8 What was the length of stay in days for this service user?

Include length of stay on assessment units as well as IP ward if applicable

9 Was this patient a delayed transfer of care?

|                                   | Tick one |
|-----------------------------------|----------|
| No                                |          |
| Yes - attributable to NHS         |          |
| Yes - attributable to social care |          |
| Yes - attributable to both        |          |

10 How many days was this patient delayed?

11 Where was this service user discharged to?

|                           | Tick one |
|---------------------------|----------|
| Own home                  |          |
| Residential home          |          |
| Nursing home              |          |
| Sheltered Housing         |          |
| Transitional arrangements |          |
| Hospice                   |          |
| Died                      |          |
| Other                     |          |

## NHS Benchmarking Network

### Managing Frailty and Delayed Transfers of Care in the Acute Setting

#### BENCHMARKING DATA SPECIFICATION

Benchmarking Network

The deadline for submission of data is **27th September 2019**

Data should be entered into the online collection form: [www.members.nhsbenchmarking.nhs.uk](http://www.members.nhsbenchmarking.nhs.uk)

Participation is open to acute providers of older people's care who are members of the NHS Benchmarking Network.

#### Introduction:

The Older People's Care in Acute Settings benchmarking project was first run in 2014 and ran for 3 years. In 2017, the project changed focused and a deeper dive of the management of Delayed Transfers of Care (DToCs) was undertaken. This was opened to acute, mental health and community hospital providers. Consultation with members in 2018 has requested a re-focus on the pathway of people living with frailty through secondary care, but with a focus on DToCs, as part of the supported discharge element of the project. The benchmarking project will cover the pathway of older people through A&E (linked to our Emergency Care project) to the supported discharge processes.

The project considers links with other sectors including primary care, community, mental health and social care particularly at the front and back end of hospitals.

If your Trust/UHB doesn't specifically operate care of older people wards, please respond in relation to the medical wards.

This project is in partnership with the British Geriatrics Society who have assisted with scoping the data collection.

If you would like to submit separately across multiple Hospital sites, please register each as a separate submission.

#### Service user audit

The NHS Benchmarking Network has worked with the BGS to develop a service user level audit for the Managing Frailty and DToC in the Acute Setting project.

The objective of the service user level audit is to provide comparative data at service user level to facilitate service improvement in Trusts/UHBs.

Trusts/UHBs are requested to select one care of older people ward where data for the service user audit can be collected. If your Trust/UHB doesn't have a care of older people ward, please select one medical ward.

Service user audit data must be collected via an excel spreadsheet which is available to download on the members' area [www.members.nhsbenchmarking.nhs.uk](http://www.members.nhsbenchmarking.nhs.uk)

Completed excel spreadsheets must be returned via e-mail to Personal Information redacted by the USI **by 27th September 2019**

#### Reporting:

An interactive online data analysis tool will be available once the submissions have been validated.

Members will also receive a bespoke dashboard report.

An event to present the findings of the project will take place on the 6th February 2020. Members can register to attend on the members' area of the website.

Project reports will be released in February 2020.

#### Please note:

- All cost figures must be entered in full. For example £ 1 million should be entered as 1000000
- If you do not have the data to answer the question, please leave blank, do not put zero
- Once data collection has closed your figures will be validated and you will be provided with an opportunity to make amendments. For this process to occur smoothly and ensure members get the most from the project it is important that the data is submitted on time.

#### Support:

Data definitions are provided, however, questions on interpretation of data items and queries can be submitted to: Personal Information redacted by the USI, Personal Information redacted by the USI)

**IMPORTANT: This EXCEL document is provided to support data collation only and CANNOT be used to submit data**  
**All data must be submitted via online data collection at: [www.nhsbenchmarking.nhs.uk](http://www.nhsbenchmarking.nhs.uk)**

#### Qualification questions

The below questions provide a general view of provision for patients living with frailty in your Trust/UHB/Hospital site. Your responses to these yes/no questions will determine which question groups will be available to answer on the online data collection pages.

| QUESTION   | DATA | DATA TYPE                 | DATA DEFINITION  | Section to appear when 'yes' selected |
|--|------|---------------------------|--|---------------------------------------|
| Does your Trust/UHB/Hospital site have an acute frailty service?   |      | Drop-down menu:- Yes / No | Acute frailty service includes geriatric liaison, and dedicated geriatric teams  | 5.Acute frailty service               |
| Do community services provide in-reach to the A&E department?  |      | Drop-down menu:- Yes / No | This may include OPAL specialist nurses, community geriatrics, geriatric/frailty interface team, district nurses, community matrons  |                                       |
| Does your Trust/UHB/Hospital site have a frailty unit?   |      | Drop-down menu:- Yes / No | A frailty unit is an acute care assessment unit, focused on the care of the frail and elderly  | 7.Frailty units                       |
| Does your Trust/UHB/Hospital site have a short-term assessment unit?   |      | Drop-down menu:- Yes / No | Short term assessment unit includes emergency assessment units, CDU, or similar unit where patients are taken for time limited period ( <b>up to 12 hours</b> ) for assessment/diagnostics/decision. Exclude Surgical Assessment Units/Pre-operative Assessment Units or similar   | 8.Short term assessment units         |
| Does your Trust/UHB/Hospital site have other assessment units (between 12 and 72 hours expected maximum length of stay)? |      | Drop-down menu:- Yes / No | "Other assessment units" include assessment units which don't fall under the definitions of "frailty unit" or "short term assessment unit" used in this project. Maternity, paediatric and surgical units should be excluded.  | 9.Other assessment units              |
| Does your Trust/UHB/Hospital site operate a "Discharge to Assess" model?   |      | Drop-down menu:- Yes / No | "Discharge to assess" schemes commonly operate as soon as the patient is clinically optimised ie the point at which care and assessment can safely be continued in a non-acute setting. The discharge to assess schemes will work with the patient/their carers to plan post-acute care in the person's own home or another community setting. This is in relation to immediate post-acute care & support needs and not the assessment for long-term care. | 13.Discharge to assess                |
| Does your Trust/UHB/Hospital site operate any Early Supported Discharge schemes?   |      | Drop-down menu:- Yes / No |  |                                       |

### Governance & system linkages

| QUESTION   | DATA | DATA TYPE                 | DATA DEFINITION  |
|--|------|---------------------------|--|
| <b>Pathways/protocols</b>  |      |                           |  |
| Is there a recognised frailty tool/pathway in use in the health and social care economy?   |      | Drop-down menu:- Yes / No |  |
| Does the Trust have a clearly defined strategy/operational policy for the delivery of acute medical care to older people?  |      | Drop-down menu:- Yes / No |  |
| Do pathways/protocols exist which clearly state the roles and relationships between A&E, frailty units/short term assessment units/other assessment units and the wards?                                   |      | Drop-down menu:- Yes / No |  |
| Please describe what policies/procedures are in place locally with regard to the management of patients who are admitted from/are discharged to care homes locally   |      | Narrative                 | Copies of any supporting information should be e-mailed to <small>Personal Information redacted by the UST</small>   |
| Please describe whether the "Red Bag" initiative is being implemented locally, and what benefits are being indicated as a result of its use.   |      | Narrative                 | The innovative red bag scheme is helping to provide a better care experience for care home residents by improving communication between care homes and hospitals. The red bag is the most visible part of successful collaboration between care homes, hospitals and ambulance staff, known as the hospital transfer pathway. When a care home resident becomes unwell and is assessed as needing hospital care, care home staff pack a dedicated red bag that includes the resident's standardised paperwork and their medication, as well as day-of-discharge clothes and other personal items.<br><br>Further information can be found at this link <a href="https://www.england.nhs.uk/publication/redbag/">https://www.england.nhs.uk/publication/redbag/</a> |
| Please describe the local frailty pathways and submit any relevant material describing local policies and procedures, particularly with reference to the management of frail patients in the acute setting |      | Narrative                 | Copies of any supporting information should be e-mailed to <small>Personal Information redacted by the UST</small>   |
| Please describe the local pathways in place for the management of people with delirium / acute confusion, particularly with reference to the management of frail patients in the acute setting.            |      | Narrative                 | Copies of any supporting information should be e-mailed to <small>Personal Information redacted by the UST</small>   |
| Does your Trust/UHB/Hospital site have a RAID team which can be accessed for patients presenting with mental health issues?  |      | Drop-down menu:- Yes / No | Rapid Assessment Interface and Discharge   |
| <b>Leadership</b>  |      |                           |  |
| Is there a designated Clinical Lead for Older People's services in the Trust/UHB/Hospital site?  |      | Drop-down menu:- Yes / No |  |
| Is there a designated Clinical Change champion for frailty within the Trust/UHB/Hospital site?   |      | Drop-down menu:- Yes / No | From the Acute Frailty Network '10 principles of managing Acute Frailty'   |
| Is there an executive sponsor within the Trust/UHB/Hospital site for the management of frail older people?   |      | Drop-down menu:- Yes / No |  |
| <b>Older People specific policies</b>  |      |                           |  |

|   |  |                           |  |
|---|--|---------------------------|--|
| Is there a policy which mentions for example, the management of outliers and the movement/transfer of older people within the acute setting |  | Drop-down menu:- Yes / No |  |
| If yes, please briefly describe the policy  |  | Narrative                 |  |

| Older People policies - links with other services  |  |                           |   |
|--|--|---------------------------|---|
| Is the Trust/UHB/Hospital site able to view the enriched Summary Care Record?  |  | Yes / No / N/A            | England only<br>The new GP contract introduced in July 2017 requires all primary care practices in England to identify people who are 65 years plus who are living with moderate and severe frailty. The GP frailty assessment will form part of the enriched Summary Care Record and this can be made available to secondary care where patients have given their consent to sharing |
| Please describe any other systems/links in place (if any) with primary care for the identification of high risk, frail older people    |  | Narrative                 | Please describe any other systems in place where secondary care is able to access primary / community care records where frailty has been identified  |
| Does the Trust/UHB/Hospital site use a third sector scheme to enhance the care of older people?  |  | Drop-down menu:- Yes / No | E.g. Dementia UK Admiral Nurses, Age UK, British Red Cross. May be used in admission avoidance schemes / supported discharge / transport schemes.   |
| If yes, please describe the third sector schemes used  |  | Narrative                 |   |
| Do any other staff, not necessarily employed by this Trust/UHB, provide in-reach to acute services to assist with admission avoidance? |  | Drop-down menu:- Yes / No |   |

for older people

|  |  |                           |   |
|--|--|---------------------------|---|
| <b>If yes, what are the hours of availability of the therapy team over a 24 hour period?</b>                       |  |                           |   |
| During the week  |  | Numerical                 | Please express as, for example, 8 rather than 9-5   |
| At weekends  |  | Numerical                 | Please express as, for example, 8 rather than 9-5   |
| Can social workers be rapidly accessed by A&E to assist with admission avoidance of older people?                  |  | Drop-down menu:- Yes / No |   |
| <b>If yes, what are the hours of availability of the social work team over a 24 hour period?</b>                   |  |                           |   |
| During the week  |  | Numerical                 | Please express as, for example, 8 rather than 9-5   |
| At weekends  |  | Numerical                 | Please express as, for example, 8 rather than 9-5   |
| Does the Hospital Discharge Team provide in-reach to A&E?  |  | Drop-down menu:- Yes / No | This relates to the Hospital Discharge Team actively going into A&E review patients who may be suitable for discharge without an admission to MAU or to inpatient care  |
| <b>If yes, what are the hours of availability of the Hospital Discharge Team in A&amp;E over a 24 hour period?</b> |  |                           |   |
| During the week  |  | Numerical                 | Please express as, for example, 8 rather than 9-5   |
| At weekends  |  | Numerical                 | Please express as, for example, 8 rather than 9-5   |
| Do community matrons / specialist nurses provide in-reach to A&E to assist with admissions avoidance?              |  | Drop-down menu:- Yes / No |   |
| Does the Trust/UHB/Hospital site have a locally agreed strategy for providing more same day emergency care?        |  | Drop-down menu:- Yes / No | Trust believes that the move to provide same day emergency care will be a significant factor in easing pressure on secondary care. Long Term Plan: 'This model will be rolled out across all acute hospitals, increasing the proportion of acute admissions typically discharged on day of attendance from a fifth to a third.' |
| If yes, please give details  |  | Narrative                 |   |

### Inpatient care

| QUESTION   | DATA | DATA TYPE  | DATA DEFINITION   |
|--|------|--|---|
| <b>Models of care on inpatient older people wards</b>  |      |  |   |
| Number of designated Care of Older people beds   |      | Numerical  | If there are units or wards under the care of older people team but with a different designation (not designated as care of older people beds) these should be included. Do not include stroke beds. Older people wards provide specialist geriatrician-led care to older people with complex needs.  |
| Is routine identification of frailty undertaken on admission/transfer to the older people inpatient wards?                             |      | Yes/No/N/A   | Use N/A where an assessment for frailty has been undertaken elsewhere in the system. Routine identification of frailty should be undertaken using a recognised tool   |
| If yes, please indicate which tool is being used   |      | Drop-down menu:-<br>Rockwood Clinical Frailty Scale (CFS)<br>Identification of Senior at Risk (ISAR)<br>Silver code<br>Prisma-7<br>Edmonton Frail Scale<br>Locally agreed frailty tool<br>Frailsafe<br>Other |   |
| If other, please indicate  |      | Narrative  | Please describe which other frailty tool is in use in this setting  |
| For which age group is routine identification of frailty undertaken?   |      | Drop-down menu:-<br>All ages<br>65+<br>70+<br>75+<br>80+<br>85+<br>Other criteria for frailty identification in place  |   |
| If other, please describe  |      | Narrative  |   |
| Is a nursing self-care model delivered on the inpatient older people wards?  |      | Drop-down menu:- Yes / No  | The model of nursing self-care in acute illness has been described to guide nurses in assessing the major issues that influence patients' participation in self-care. Regular assessment of patients' perceptions and circumstances relative to the variables identified by the model will guide nurses in promoting and supporting self-care by acutely ill patients. This works on the theory that patients will want to be as independent as possible and self-care as far as possible. See pdf's for guidance. Older People wards only. |
| Does a social care worker or generic supported discharge co-ordinator form part of the MDT supporting care of older people wards?      |      | Drop-down menu:-<br>Yes<br>No  |   |
| Do the older people wards in the Trust/ONB/hospital site maintain lists of older people who are no longer benefitting from acute care? |      | Drop-down menu:-<br>Yes<br>No  | From the NAO report 'Discharging older patients from hospital'<br><a href="https://www.nao.org.uk/report/discharging-older-patients-from-hospital/">https://www.nao.org.uk/report/discharging-older-patients-from-hospital/</a>   |
| If yes, are daily progress chasing meetings held?  |      | Drop-down menu:-<br>Yes<br>No  |   |
| <b>Models of care on inpatient wards (not designated older people wards)</b>   |      |  |   |
| Number of medical beds (not designated care of older people beds)  |      | Numerical  | Please include stroke beds  |
| Is routine identification of frailty undertaken on admission/transfer to the inpatient wards in older people?                          |      | Yes/No/N/A   | Use N/A where an assessment for frailty has been undertaken elsewhere in the system. Routine identification of frailty should be undertaken using a recognised tool   |

### Discharge process

| QUESTION  | DATA | DATA TYPE                                  | DATA DEFINITION  |
|---|------|--|--|
| <b>Discharge protocols</b>  |      |  |  |
| Is there a documented supported discharge protocol consistently applied across all wards?   |      | Drop-down menu:- Yes / No                  |  |
| Is there an up-to-date directory of services available locally?   |      | Drop-down menu:- Yes / No                  |  |
| Is there a locally agreed protocol for referral to the Housing Department(s)?   |      | Drop-down menu:- Yes / No                  |  |
| Is there a locally agreed standard time for processing of referrals through the Housing Department?   |      | Drop-down menu:- Yes / No                  |  |
| Does the Trust/UHB/Hospital site collect the numbers of patients who have lost packages of care due to an acute admission?  |      | Drop-down menu:- Yes / No                  |  |
| <b>Discharge processes</b>  |      |  |  |
| Is all discharge information documented in a single 'discharge passport' (or equivalent)?   |      | Drop-down menu:- Yes / No                  |  |
| Does the Trust/UHB/Hospital site have an integrated discharge team (IDT) or equivalent?   |      | Drop-down menu:- Yes / No                  | Integrated means both health and social care staff within the team<br>"Discharge team" means any team with a hospital wide remit to deal with complex or supported discharges  |
| Does the Trust/UHB/Hospital site use trusted assessors to carry out a holistic assessment of need to avoid duplication?   |      | Drop-down menu:- Yes / No                  | A trusted assessor is a person who is competent in performing to an agreed set of nationally recognised competencies. From the NAO report 'Discharging older patients from hospital' <a href="https://www.nao.org.uk/report/discharging-older-patients-from-hospital/">https://www.nao.org.uk/report/discharging-older-patients-from-hospital/</a> |
| Estimate the percentage of supported discharges that have input from the discharge team   |      | Percentage                                 | Discharge team means any team with a hospital wide remit to deal with complex or supported discharges  |
| Estimate the percentage of supported discharges that are dealt with by ward staff without the input of the discharge team   |      | Percentage                                 | Discharge team means any team with a hospital wide remit to deal with complex or supported discharges  |
| Can the discharge team directly start health care packages?   |      | Drop-down menu:- Yes / No                  | directly start a package means without further assessment from the receiving team  |
| Can the discharge team directly start social care packages?   |      | Drop-down menu:- Yes / No                  | directly start a package means without further assessment from the receiving team  |
| Is there an executive sponsor within the Trust/UHB/Hospital site for the supported discharge process?   |      | Drop-down menu:- Yes / No                  |  |
| Do the inpatient wards have dedicated ward discharge co-ordinators?   |      | Drop-down menu:- All wards/ some wards/ No |  |
| Does the Trust/UHB/Hospital site operate therapy led discharge?   |      | Drop-down menu:- Yes / No                  |  |
| Does the Trust/UHB/Hospital site operate nurse led discharge?   |      | Drop-down menu:- Yes / No                  |  |
| Are Expected Dates of Discharge set within 24 hours of admission?   |      | Drop-down menu:- Yes / No                  | <a href="https://improvement.nhs.uk/documents/629/expected-date-of-discharge-and-clinical-criteria-RIG.pdf">https://improvement.nhs.uk/documents/629/expected-date-of-discharge-and-clinical-criteria-RIG.pdf</a>  |
| Is the Trust/UHB/Hospital site operating daily board rounds?  |      | Drop-down menu:- Yes / No                  | <a href="https://improvement.nhs.uk/resources/safer-patient-flow-bundle-board-rounds/">https://improvement.nhs.uk/resources/safer-patient-flow-bundle-board-rounds/</a>  |
| If yes, please use this space to indicate the impact of using the daily board round methodology on flow through the acute setting   |      | Narrative                                  |  |
| Does the Trust/UHB/Hospital site operate the Red: Green Bed Day methodology?  |      | Drop-down menu:- Yes / No                  | <a href="https://improvement.nhs.uk/improvement-offers/red2green-campaign">https://improvement.nhs.uk/improvement-offers/red2green-campaign</a>  |
| If yes, please use this space to indicate the impact of using the Red: Green Bed day methodology on flow through the acute setting  |      | Narrative                                  |  |
| Do you have access to social care at weekends to facilitate the discharge of patients?  |      | Drop-down menu:- Yes / No                  |  |
| <b>Other discharge schemes</b>  |      |  |  |
| Do the IDT or ward staff have access to dedicated Pharmacy advice for supported discharges?   |      | Drop-down menu:- Yes / No                  |  |
| Does your Trust/UHB/Hospital site have access to specialist transport schemes (other than that provided by Ambulance services) to expedite the discharge of patients from hospital? |      | Drop-down menu:- Yes / No                  |  |
| Are any third sector schemes in place which have been commissioned to help with the discharge process from hospital?  |      | Drop-down menu:- Yes / No                  |  |

|   |  |   |  |
|---|--|---|--|
| Are there local schemes to expedite the discharge of patients back to care homes?                     |  | Drop-down menu:- Yes / No   |  |
| If yes, please describe   |  | Narrative   |  |
| <b>Delayed transfers of care processes / reporting</b>  |  |   |  |
| Do you agree your SITREP data with your local authority partners before reporting?                    |  | Drop-down menu:- Yes / No   | England only<br>From the NAO report 'Discharging older patients from hospital'<br><a href="https://www.nao.org.uk/report/discharging-older-patients-from-hospital/">https://www.nao.org.uk/report/discharging-older-patients-from-hospital/</a>  |
| Did you impose a fine on any of your local authority partners in 2018/19?                             |  | Drop-down menu:- Yes / No   | England only   |
| <b>Continuing Healthcare (CHC) processes</b>  |  |   |  |
| Is there a locally agreed standard time for the application of the CHC Checklist Tool                 |  | Yes / No  | For most people, the first step is to have an assessment with a health or social care professional using a screening tool called the Checklist Tool. This screening may suggest that a patient may be eligible for NHS continuing healthcare.  |
| If yes, give the local standard in days   |  | Numerical   |  |
| Is there a locally agreed standard time for the application of CHC Decision Support Tool              |  | Yes / No  | If the individual 'screens in' using the Checklist then their needs will be considered in more detail using the Decision Support Tool (DST). This will be done by at least two professionals (from different professional backgrounds) involved in their care who are referred to as the 'multi-disciplinary team' or MDT.   |
| If yes, give the local standard in days   |  | Numerical   |  |
| Is there a locally agreed policy for fast-track assessment for CHC?                                   |  | Yes / No  | Fast-track assessment of CHC may be used where health is deteriorating quickly and the patient is nearing end of life. Support and care packages are usually put in place within 48 hours  |
| Where does assessment for CHC occur?  |  |   | To qualify for CHC the individual has to be assessed and found to have a 'primary health need'. The term 'primary health need' has a very specific meaning, i.e. the patient's day to day nursing/healthcare needs are, taken as whole, beyond local authority powers to meet. This is judged by looking at the nature, intensity, complexity and unpredictability of the patient's needs. Any one, or any combination, of these four characteristics of need might mean that the patient is judged to have a 'primary health need'. |
| On inpatient ward   |  | Yes / No  |  |
| On dedicated assessment ward  |  | Yes / No  |  |
| Intermediate care bed based unit  |  | Yes / No  |  |
| In "time to think" or transition beds   |  | Yes / No  |  |
| At place of care/own home   |  | Yes / No  |  |
| Other   |  | Yes / No  |  |
| If other, please describe   |  | Narrative   | Of particular interest would be insight as to where patients who are occupying an acute bed wait whilst awaiting a CHC assessment. Are the patients receiving any active interventions e.g. to prevent deconditioning, etc.  |
| Who leads the CHC assessment?   |  | <b>Drop-down menu:-</b><br>Integrated discharge team<br>Hospital discharge team (health only)<br>Separate team of CHC nurse assessors<br>Other  |  |
| How long does CHC assessment take on average (in days)?   |  | Numerical   | Average time in days from when the CHC checklist is applied to panel application   |
| Please use this space for any other information about how the CHC process is managed locally          |  | Narrative   | Of particular interest would be insight as to where patients who are occupying an acute bed wait whilst awaiting a CHC assessment  |
| <b>Intermediate care</b>  |  |   |  |
| Are criteria in place locally outlining which patients might be suitable for intermediate care?       |  | Drop-down menu:- Yes / No   | See "Intermediate Care – Halfway Home" updated guidance for the NHS and LAs, July 2009   |
| If a patient is deemed suitable for intermediate care, who carries out intermediate care assessments? |  | <b>Drop-down menu (tick all that apply):-</b><br>Integrated discharge team<br>Hospital discharge team (health only)<br>Separate intermediate care assessment team based in hospital<br>Inpatient wards<br>Assessment teams from IC providers<br>other |  |
| <b>Who carries out Mental Capacity Act assessments?</b>   |  |   |  |

|  |  |  |  |
|--|--|--|--|
| Doctors  |  | Drop-down menu:-<br>Often<br>Occasionally<br>Never |  |
| Nurses   |  | Drop-down menu:-<br>Often<br>Occasionally<br>Never |  |
| Mental health liaison  |  | Drop-down menu:-<br>Often<br>Occasionally<br>Never |  |
| Psychiatrist   |  | Drop-down menu:-<br>Often<br>Occasionally<br>Never |  |
| Therapist  |  | Drop-down menu:-<br>Often<br>Occasionally<br>Never |  |
| Social workers   |  | Drop-down menu:-<br>Often<br>Occasionally<br>Never |  |
| Shared patient records   |  |  |  |
| Can social workers access patient records?   |  | Yes / No   |  |
| Can social workers document their notes in patient records?  |  | Yes / No   |  |
| Can community services access secondary care / acute services patient records?                                       |  | Yes / No   |  |
| Can community services document their notes in secondary care / acute services patient records?                      |  | Yes / No   |  |
| Aids and adaptations   |  |  |  |
| Is there a locally agreed standard for the time taken for aids and adaptations to be fitted to a service user's home |  | Yes / No   |  |
| If yes, give the standard for aids and adaptations (days)  |  | Numerical  | Give waiting time from referral to fitting in days |

#### Discharge to assess

| QUESTION   | DATA | DATA TYPE   | DATA DEFINITION   |
|--|------|---|---|
| <b>Discharge to Assess (D2A)</b>   |      |   |   |
| Which discipline within your organisation clinically leads the discharge to assess service?  |      | Drop-down menu:-<br>Medical<br>Therapy<br>Nursing<br>Social Care<br>Other |   |
| If other, please describe here   |      | Narrative   |   |
| Where a discharge to assess model is in operation, what is the percentage of supported discharges where assessments are carried out in the patient's own home? |      | Percentage  | From the NAO report 'Discharging older patients from hospital' <a href="https://www.nao.org.uk/report/discharging-older-patients-from-hospital/">https://www.nao.org.uk/report/discharging-older-patients-from-hospital/</a><br>If an exact figure is not available, please provide an estimate.                    |
| Is there a locally agreed standard for the time taken to assess a person in their own home under the discharge to assess model?                                |      | Drop-down menu:- Yes / No   |   |
| If yes, what is this standard in hours?  |      | Numerical   |   |
| On average, how long does it take for a person to be assessed in their own home in hours?  |      | Numerical   | waiting time for assessment in hours. It is likely that the organisation responding to this question will only know this if the Discharge to Assess scheme is run and managed by the same organisation.   |
| Please use this space to describe your local discharge to assess model   |      | Narrative   | If known, describe which organisation manages the service, how this links with local acute, community and social care services, the composition of the workforce delivering the service, etc. It would be useful to know the impact of having a local Discharge to Assess scheme on flow through the acute setting. |

**Finance**

Please include here the costs of teams identified under Workforce section. Please ensure consistency e.g. where staff are apportioned across teams, apportion budgets accordingly.  
Include the cost of social care colleagues where this has been included in the Workforce section (even if not paid by the Trust/UHB)  
You are asked to provide the total costs/workforce of the short term assessment unit and supported discharge teams on the basis that these areas will largely be dealing with older people but it is not feasible to attribute cost/workforce to the older people cohort only.  
The bank, agency and overtime spend should be included in total pay costs column and then extracted for the bank, agency & overtime data fields below.

| QUESTION  |             |                 |                                       |               | DATA DEFINITION   |
|---|-------------|-----------------|---------------------------------------|---------------|---|
| Cost of teams   | Pay costs £ | Non pay costs £ | Indirect costs/overhead allocations £ | Total costs £ | Use outturn 2018/19   |
| Acute frailty team (resource allocated to A&E)              |             |                 |                                       |               | include dedicated geriatric team and any other dedicated admission avoidance resource such as therapists and social workers<br>This team may be located in A&E or in an assessment unit |
| Assessment units (all costs of the units)                   |             |                 |                                       |               | Exclude maternity, paediatric and surgical units.   |
| Care of older people medical team                           |             |                 |                                       |               | Exclude staff time included in dedicated geriatric A &E team or short term assessment team  |
| Care of older people wards (all non-medical staff on wards) |             |                 |                                       |               | If care of older people is under general medicine, provide the data for your general medicine wards   |
| Supported discharge team (all costs of the team)            |             |                 |                                       |               |   |

| CIP/CRES target as % of budget                | Percentage |
|---|------------|
| Acute frailty service in A&E department CIP % |            |
| Assessment units CIP %                        |            |
| Care of older people medical team CIP %       |            |
| Care of older people wards CIP %              |            |
| Supported discharge team CIP %                |            |

CIP as % of total budget 2018/19

| Bank, agency & overtime expenditure 2018/19 |  |
|---|--|
| Bank spend                                  |  |
| Agency spend                                |  |
| Overtime spend                              |  |

**Managing Frailty and Delayed Transfers of Care in the Acute Setting**

[Index](#)

**Workforce**

All figures should be for the year 2018/19 WTE in establishment  
You are asked to provide the total costs/workforce of the short term assessment unit and supported discharge teams on the basis that these areas will largely be dealing with older people but it is not feasible to attribute cost/workforce to the older people cohort only.  
Please note, the template should be completed on the basis of the employed job ROLE rather than professional background  
Please do not double-count employees if they have, for example, a managerial role but a clinical role also; time should be apportioned accordingly.

**Medical staffing**

\*other Medical staff would include Associate Specialists, Staff Grade doctors, Trust Grades, Specialty Doctors

| WTE  | Consultant funded establishment | Other medical (non-Consultant or other trainee WTE - not FY1/2) funded establishment | Trainees - FY 1 funded establishment | Trainees - FY 2 funded establishment | Locums |
|--|---------------------------------|--|--------------------------------------|--------------------------------------|--------|
| Acute frailty team (resource allocated to A&E)   |                                 |  |                                      |                                      |        |
| Assessment units all medical staff (exclude maternity, paediatrics and surgical units) |                                 |  |                                      |                                      |        |
| Care of older people medical team (not included in above teams)                        |                                 |  |                                      |                                      |        |

#### Additional workforce

| QUESTION   | DATA | DATA TYPE                 | DATA DEFINITION  |
|--|------|---------------------------|--|
| Does the Trust/UHB/Hospital site have Advanced Nurse Practitioners (ANP) in older people's care?                   |      | Drop-down menu:- Yes / No |  |
| Does every care of older people ward in your Trust/UHB/Hospital site have access to an ANP in older people's care? |      | Drop-down menu:- Yes / No |  |
| Do ANPs provide advice and support wider than the older people wards?  |      | Drop-down menu:- Yes / No |  |
| Do the ANPs in older people's care link directly with community services?  |      | Drop-down menu:- Yes / No | E.g. working with community matrons / care coordinators in the community to step service users up and down to/from secondary care  |
| If yes, please describe how this linkage works   |      | Narrative                 |  |
| Does the Trust/UHB/Hospital site participate in a consultant practitioner trainee programme?                       |      | Drop-down menu:- Yes / No | Developing clinical leaders to work with vulnerable older people   |
| Does the Trust/UHB/Hospital site have specific dementia training for all staff?                                    |      | Drop-down menu:- Yes / No |  |
| Does the Trust/UHB/Hospital site provide any training on frailty specifically for the surgical specialties?        |      | Drop-down menu:- Yes / No |  |
| If yes, please describe  |      | Narrative                 |  |
| % of dedicated care of older people workforce who have completed local mandatory training requirements             |      | Percentage                | % of staff that have completed local mandatory training requirements during the year 2018/19 calculated as: Numerator: WTE completing mandatory training requirements in the year; divided by Denominator: Average WTE staff in post in the year eligible to complete mandatory training requirements multiplied by 100 to give a % rate |
| % of dedicated care of older people workforce who have had an annual appraisal                                     |      | Percentage                | % of staff that have an annual appraisal completed during the year 2018/19 calculated as: Numerator: WTE having had an annual appraisal in the year; divided by Denominator: Average WTE staff in post in the year eligible for annual appraisal multiplied by 100 to give a % rate  |

|   |  |                           |   |
|---|--|---------------------------|---|
| Does the Trust/CHB/Hospital site provide a frailty identification/awareness training programme              |  | Drop-down menu:- Yes / No | This would include why it is important to identify frailty, why it is important, the frailty syndromes, etc |
| Please indicate which staff receive frailty identification / awareness training                             |  |                           |   |
| Geriatricians   |  | Drop-down menu:- Yes / No |   |
| Other speciality medics   |  | Drop-down menu:- Yes / No |   |
| Nursing staff   |  | Drop-down menu:- Yes / No |   |
| Therapy staff   |  | Drop-down menu:- Yes / No |   |
| Please outline any other staff that receive frailty identification / awareness training                     |  | Narrative                 |   |
| Is this training mandatory?   |  | Drop-down menu:- Yes / No |   |
| Is training available for non-core staff?   |  | Drop-down menu:- Yes / No | Non core refers to non geriatric/frailty specialist trained staff   |
| Does the Trust/CHB/Hospital site provide training on how to identify/screen for people living with frailty? |  | Drop-down menu:- Yes / No |   |
| Is this training mandatory?   |  | Drop-down menu:- Yes / No |   |
| Does the Trust/CHB/Hospital site provide training on how to assess and manage people living with frailty?   |  | Drop-down menu:- Yes / No |   |
| Is this training mandatory?   |  | Drop-down menu:- Yes / No |   |
| Please describe any initiatives in place to help with the recruitment or retention of staff                 |  | Narrative                 |   |

#### Quality & outcomes

| QUESTION  | DATA | DATA TYPE                 | DATA DEFINITION   |
|---|------|---------------------------|---|
| <b>Key indicators for care of older people wards</b>  |      |                           |   |
| Do the Care of Older People wards routinely collect Patient Reported Experience Measures?                               |      | Drop-down menu:- Yes / No | Patient Reported Experience Measures which are routinely collected following intervention (rather than an annual patient satisfaction survey). PREMs assess the experience of care delivered to patients from the patient perspective   |
| Do the Care of Older People wards routinely collect Patient Reported Outcome Measures?                                  |      | Drop-down menu:- Yes / No | Patient Reported Outcome Measures which are routinely collected following intervention (rather than an annual patient satisfaction survey). PROMs assess the quality of care delivered to patients from the patient perspective   |
| Friends and Family Test - percentage of patients who would recommend the service  |      | Percentage                | Include those 'extremely likely' or 'likely' to recommend the service.<br>Not applicable to Wales and Northern Ireland  |
| Number of formal complaints - Care of Older People wards during 2018/19   |      | Numerical                 |   |
| Number of Serious Incidents - Care of Older People wards during 2018/19   |      | Numerical                 | Number of serious incidents recorded (for Older People's services) by the organisation in 2018/19   |
| Percentage of SIs fully investigated and completed within 60 working days during 2018/19 for Care of Older People wards |      | Percentage                | Numerator: The number of older people SIs fully investigated and completed in 2018/19 within 60 working days; divided by<br>Denominator: The total number of Older People SIs fully investigated and completed in the year; multiplied by 100 to give the percentage rate. If there were no reported serious incidents, please leave blank. |
| Number of never events recorded during 2018/19 for Care of Older People wards   |      | Numerical                 |   |

|   |  |                           |   |
|---|--|---------------------------|---|
| Number of safeguarding incidents reported 2018/19 for Care of Older People wards                                    |  | Numerical                 | include safeguarding alerts to adult social care  |
| Number of whistle blowing incidents reported to the Trust Ombudsman Board in 2018/19 for Care of Older People wards |  | Numerical                 |   |
| Number of medication errors on Care of Older People wards 2018/19   |  | Numerical                 |   |
| Does the Care of Older People service routinely carry out satisfaction surveys with service users/carers?           |  | Drop-down menu:- Yes / No | At least an annual satisfaction survey for Older People's services users/carers   |
| <b>Harm free care (Patient Safety Thermometer)</b>  |  |                           |   |
| Number of incidences of falls (with harm) of patients whilst on the Care of Older People wards 2018/19              |  | Numerical                 | see <a href="http://www.safetythermometer.nhs.uk/">http://www.safetythermometer.nhs.uk/</a> for further information. Take the average of the 12 monthly scores for 2018/19. |
| Number of incidents of pressure ulcers whilst on the Care of Older People wards 2018/19                             |  | Numerical                 | see <a href="http://www.safetythermometer.nhs.uk/">http://www.safetythermometer.nhs.uk/</a> for further information. Take the average of the 12 monthly scores for 2018/19. |
| Number of occurrences of UTIs of patients with catheterisation whilst on the Care of Older People wards 2018/19     |  | Numerical                 | see <a href="http://www.safetythermometer.nhs.uk/">http://www.safetythermometer.nhs.uk/</a> for further information. Take the average of the 12 monthly scores for 2018/19. |
| Number of patients catheterised on Care of Older People wards 2018/19   |  | Numerical                 | Number of patients newly catheterised on care of older people wards in 2018/19. Take the average of the 12 monthly scores for 2018/19.                                      |
| Number of incidences of newly acquired VTEs whilst on the Care of Older People wards 2018/19                        |  | Numerical                 | see <a href="http://www.safetythermometer.nhs.uk/">http://www.safetythermometer.nhs.uk/</a> for further information. Take the average of the 12 monthly scores for 2018/19. |
| Number of occurrences of C. Diff on the Care of Older People wards 2018/19  |  | Numerical                 | The number of occurrences of hospital acquired clostridium difficile infection on care of older people wards in 2018/19   |
| Number of occurrences of hospital acquired pneumonia on the Care of Older People wards 2018/19                      |  | Numerical                 | The number of occurrences of hospital acquired pneumonia on care of older people wards in 2018/19   |
| Number of occurrences of MRSA on the Care of Older People wards 2018/19   |  | Numerical                 | The number of occurrences of MRSA on care of older people wards in 2018/19  |

| Trust/UHB/Hospital site wide indicators   |  |                           |   |
|---|--|---------------------------|---|
| Does the Trust/UHB/Hospital site have a process in place for disseminating NICE quality standards?  |  | Drop-down menu:- Yes / No |   |
| Number of incidences of falls (with harm) in the Trust/UHB/Hospital site in 2018/19   |  | Numerical                 | see <a href="http://www.safetythermometer.nhs.uk/">http://www.safetythermometer.nhs.uk/</a> for further information   |
| NHS Staff Survey results % feeling satisfied with the quality of work and patient care they are able to deliver (Trust/UHB/Hospital site)             |  | Percentage                | Latest survey results from NHS staff survey (use 2019 results if available). Is only available at whole organisational level and does not apply to Wales  |
| Is the Trust/UHB/Hospital site taking part in any local CQUIN schemes related to the care of older people?  |  | Yes/No                    | Welsh UHBs and NI HSCTs should respond yes to this question if any locally agreed quality improvement schemes are in operation locally (as Wales and NI don't operate CQUIN schemes in the same way as England) |
| If yes, please provide details  |  | Narrative                 |   |
| Is the Trust/UHB/Hospital site taking part in any local CQUIN schemes related to the management of frailty in the acute setting?                      |  | Yes/No                    | Welsh UHBs and NI HSCTs should respond yes to this question if any locally agreed quality improvement schemes are in operation locally (as Wales and NI don't operate CQUIN schemes in the same way as England) |
| If yes, please provide details  |  | Narrative                 |   |
| Please describe any good practice in the services covered by this survey which is occurring in your Trust/UHB/Hospital site                           |  | Narrative                 |   |
| Please briefly describe any examples of how your organisation has used previous iterations of the benchmarking project to support service improvement |  | Narrative                 |   |

**Intergrated Care Systems Project and Consent**

The NHS Benchmarking Network is developing a new Integrated Care Systems product to support strategic planning at the whole system level.  
The product will use selected data from NHSBN projects alongside national data sets.  
To ensure this tool is as complete and useful as possible, we are seeking consent to use the following data submitted as part of this collection (2018/19 data) and the previous collection (2017/18 data) on a named basis.

**Only the following data would be used for this purpose, and no other data already submitted.**  
Please review the data below, answer the two consent questions, and click 'Save'.

| QUESTION   | DATA | DATA TYPE                 | DATA DEFINITION  |
|--|------|---------------------------|--|
| Is routine identification of frailty undertaken on entry to the accident and emergency department in older people? |      | Drop-down menu:- Yes / No | Routine identification of frailty should be undertaken using a recognised tool |

|   |   |                           |  |
|---|---|---------------------------|--|
| Does your Trust/UHB/Hospital site have a frailty unit?  |   | Drop-down menu:- Yes / No | Acute frailty service includes geriatric liaison, and dedicated geriatric teams  |
| Is Comprehensive Geriatric Assessment delivered on Care of Older People wards?                            |   | Drop-down menu:- Yes / No | CGA is a multi-dimensional, multi-disciplinary process which identifies medical, social and functional needs, and the development of an integrated/co-ordinated care plan to meet those needs  |
| Does your Trust/UHB/Hospital site operate a "Discharge to Assess" model?                                  |   | Drop-down menu:- Yes / No | "Discharge to assess" schemes commonly operate as soon as the patient is clinically optimised ie the point at which care and assessment can safely be continued in a non-acute setting. The discharge to assess schemes will work with the patient/their carers to plan post-acute care in the person's own home or another community setting. This is in relation to immediate post-acute care & support needs and not the assessment for long-term care. |
| Does the Trust/UHB/Hospital site have an awareness programme for non-geriatricians about frailty and CGA? |   | Drop-down menu:- Yes / No |  |
| How long does CHC assessment take on average (in days)?   |   | Numerical                 | Average time in days from when the CHC checklist is applied to panel application   |
| Number of designated Care of Older people beds  |   | Numerical                 | If there are units or wards under the care of older people team but with a different designation (not designated as care of older people beds) these should be included. Do not include stroke beds. Older people wards provide specialist geriatrician-led care to older people with complex needs.   |
| Total delayed transfers of care (total for 2018/19 from SITREP) in bed days:                              |   | Drop-down menu:           | NHS England November 2018 guidance on SITREP reporting. If this information is collected by the Northern Ireland HSCTs or the Welsh University Health Boards, please still provide.  |
| 0-64  |   | Numerical                 |  |
| 65-74   |   | Numerical                 |  |
| 75-84   |   | Numerical                 |  |
| 85+   |   | Numerical                 |  |
| <b>Trust Total (Auto-Sum)</b>   | 0 | Auto-sum                  |  |
| Trust/UHB/Hospital site WTE Geriatricians employed  |   | Numerical                 | WTE Geriatricians employed at year end 2018/19 (all staff)   |
| <b>Overall Workforce Metrics (vacancy/sickness/turnover)</b>  |   |                           |  |
| Care of older medical team  |   |                           |  |
| Vacancy rate  |   | Percentage                |  |
| Sickness rate   |   | Percentage                |  |
| Turnover rate   |   | Percentage                |  |
| Care of older people wards  |   |                           |  |
| Vacancy rate  |   | Percentage                |  |
| Sickness rate   |   | Percentage                |  |
| Turnover rate   |   | Percentage                |  |
| Number of medical beds (not designated Care of Older people beds)   |   | Numerical                 | Please include stroke beds   |

|  |   |           |  |
|--|---|-----------|--|
| Total number of occupied bed days in Trust 2018/19 |   |           |  |
| 0-64   |   | Numerical | Inpatient care only. Please exclude assessment units.    |
| 65-74  |   | Numerical | Inpatient care only. Please exclude assessment units.    |
| 75-84  |   | Numerical | Inpatient care only. Please exclude assessment units.    |
| 85+  |   | Numerical | Inpatient care only. Please exclude assessment units.    |
| Trust Total (Auto-sum)                             | 0 | Auto-sum  |  |
| Trust/UHB/Hospital site WTE consultants employed   |   | Numeric   | WTE consultants employed at year end 2018/19 (all staff) |

Consent

| QUESTION   | DATA | DATA TYPE  | DATA DEFINITION |
|--|------|--|-----------------|

# Patient Safety Report for Acute Governance Meeting April 2021

## Surgical Site Infection (SSI) Ortho:

- Next update when Q4 2020 SSI Rates released by PHA

## Surgical Site Infection (SSI) C/Section:

- The quarterly C/S Audits takes place in March 2021 with results reported in May 21

## Ventilator Associated Pneumonia (VAP):

- VAP reported 25<sup>th</sup> Feb 21. Period of 2,836 Vent Days/502 Calendar Days since previous VAP 12<sup>th</sup> Oct 19
- Vent Days Between VAP's 19 (26<sup>th</sup> February 21 → 28<sup>th</sup> February 21)
- Calendar Days Between VAP's 3 (26<sup>th</sup> February 21 → 28<sup>th</sup> February 21)

Overall Bundle Compliance Feb 21, ICU **100%** (5/5 cases audited), up from **50%** (1/2 cases audited) in Jan 21

- The Audit on the Wards has been suspended until further notice due to Covid-19
- Results shared with Lead Clinician & Lead Nurse for this QI work to address areas of non-compliance

#### NEWS:

- The figures are a combination of the Independent Audit undertaken by Lead Nurses & the audit undertaken by the Ward Managers/Band 6's. Details of Overall Bundle Compliance is below:

| Quarter | Q3 20/21                | Q2 20/21                | Q1 20/21                               | Q4 19/20                |
|---------|-------------------------|-------------------------|--|-------------------------|
| ACUTE   | <b>94%</b><br>(422/451) | <b>92%</b><br>(428/463) | <b>Audit cancelled due to Covid-19</b> | <b>88%</b><br>(346/392) |
| TRUST   | <b>93%</b><br>(554/596) | <b>93%</b><br>(541/584) | <b>Audit cancelled due to Covid-19</b> | <b>90%</b><br>(442/492) |

- NB: Q4 19/20 data is for Jan & Feb 20 only. March audits not undertaken due to Covid-19
- Q1 20/21 Audit was cancelled by the PHA due to Covid-19

#### MUST (Malnutrition Universal Screening Tool):

- The figures are a combination of the Independent Audit undertaken by Lead Nurses & the audit undertaken by the Ward Managers/Band 6's. Details of Overall Bundle Compliance is below:

| Quarter | Q3 20/21                | Q2 20/21                | Q1 20/21                               | Q4 19/20                |
|---------|-------------------------|-------------------------|--|-------------------------|
| ACUTE   | <b>90%</b><br>(365/406) | <b>88%</b><br>(404/458) | <b>Audit cancelled due to Covid-19</b> | <b>90%</b><br>(353/392) |
| TRUST   | <b>92%</b><br>(502/548) | <b>90%</b><br>(521/578) | <b>Audit cancelled due to Covid-19</b> | <b>92%</b><br>(451/492) |

- NB: Q4 19/20 data is for Jan & Feb 20 only. March audits not undertaken due to Covid-19
- Q1 20/21 Audit was cancelled by the PHA due to Covid-19

The figures are a combination of the Independent Audit undertaken by Lead Nurses & the audit undertaken by the Ward Managers/Band 6's. Details of Overall Bundle Compliance is below:

| Quarter | Q3 20/21          | Q2 20/21          | Q1 20/21                               | Q4 19/20          |
|---------|-------------------|-------------------|--|-------------------|
| ACUTE   | <b>1</b><br>(405) | <b>2</b><br>(461) | <b>Audit cancelled due to Covid-19</b> | <b>1</b><br>(392) |
| TRUST   | <b>4</b><br>(549) | <b>2</b><br>(582) |  | <b>1</b><br>(492) |

- NB: Q4 19/20 data is for Jan & Feb 20 only. March audits not undertaken due to Covid-19

- Q1 20/21 Audit was cancelled by the PHA due to Covid-19

## VTE:

Key: Red – Under 85% compliance, Amber – Compliance between 85% & 94%, Green – Above 95% (Reg. target)

- In summary Overall Compliance with fully completed Risk Assessment on the Acute Wards was **93.9%** (290/309 charts audited) down from **96.2%** (251/261 charts audited) in Jan 21
- Total number of weekly audits not completed in Feb 21 was **9** down from **19** in Jan 21

- The Run Chart below shows compliance against the Commissioning Plan target of **92%** compliance. The Trust Compliance includes the Non-Acute Wards & therefore their compliance has been included also for comparison. Trust Overall Compliance in Feb 21 was **95%** (364/385), down from **97%** in Jan 21

### Crash Calls:

- CAH Rate **1.42** per 1,000 deaths/discharges (**3** Crash Calls) down from **1.89** (**4** Crash Calls) in Jan 21
- DHH Rate **0** per 1,000 deaths/discharges (**0** Crash Calls) down from **0.55** (**1** Crash Call) in Jan 21
- Trust Rate **0.77** per 1,000 deaths/discharges (**3** Crash Calls) down from **1.30** (**5** Crash Calls) in Jan 21
- Trust cumulative Crash Call Rate for 20/21 stands at **0.64** (**26**) per 1,000 deaths/discharges, down from **0.67** (**39**) in 19/20

### Emergency Care QI Work: Sepsis 6 CAH & DHH:

- The new Regional Sepsis QI initiative has been ongoing from Oct 19. The Regional Agreed aim is to improve the time to 1<sup>st</sup> antibiotics "In Hours" i.e. Mon → Fri 9:00am → 5:00pm. Work is underway in 3 Pilot Areas ED, CAH, (Oct 19 – Dr. Suzie Budd, Clinical Lead), AMU, CAH (Dec 19 – Dr. Emily Hannah, Clinical Lead) & ED, DHH (14<sup>th</sup> Jan 20 – Dr. Laura Lavery, Clinical Lead). In the ED's of CAH & DHH it was decided to measure compliance 24/7. The Run Chart below shows progress made in ED, CAH. Data from the other Pilot Areas will be shared in due course

- Feb 21 compliance in-hours was **75%** (3/4 cases audited), up from **33%** (2/6 cases audited) in Jan 21. Case outside target timeframe was 61 mins.
- Feb 21 compliance out-of-hours was **40%** (2/5 cases audited), down from **71%** (5/7 cases audited). Cases outside target timeframe ranged between 76 & 109 mins.
- Mean Time Jan 21 → Feb 21 = **59** mins, within Regional target timeframe of 60 minutes.
- In 2020 Mean Time = **76** minutes
- Auditing in ED, DHH & AMU have been suspended due to Covid-19

The Run Chart below shows Overall Bundle Compliance with the Sepsis6 Bundle in ED's of CAH & DHH

- Auditing has been suspended due to Covid-19

### WHO Surgical Safety Checklist:

- The Monthly Audits were reinstated in May 19 & were suspended Feb → May 20 due to Covid-19
- Feb 21 Compliance **100%** (50/50) up from **98%** (49/50) in Jan 21, Cumulative Compliance 20/21 **99%**

- Regional agreement to collect data on the following, however only Lysis Data will be reported to the PHA/DHSSPS on a quarterly basis:

|   | CAH               |                   | DHH               |                 | TRUST             |                   |  |

| Thrombolysis Rate (Yearly)  | 17.6%<br>(58/329) | 13.3%<br>(45/338) | 16.1%<br>(28/174) | 13.8%<br>(9/65) | 15.9%<br>(69/435) | 13.4%<br>(54/403) |  |

The above is “Real Time” data, which is subject to change. The Directorate of Performance & Reform is responsible for reporting to the RHSCB. From the above table only the lysis rates are reported. Furthermore their report is 3 months in arrears to allow Clinical Coding to reach an acceptable level.

# SKIN Care (Pressure Ulcer):

WIT-24787

- The figures are a combination of the Independent Audit undertaken by Lead Nurses & the audit undertaken by the Ward Managers/Band 6's. Details of Overall Bundle Compliance is below:

| Quarter | Q3 20/21         | Q2 20/21         | Q1 20/21                                 | Q4 19/20         |
|---------|------------------|------------------|--|------------------|
| ACUTE   | 88%<br>(224/256) | 84%<br>(262/311) | Audit<br>cancelled<br>due to<br>Covid-19 | 76%<br>(178/233) |
| TRUST   | 89%<br>(324/366) | 85%<br>(331/389) |  | 81%<br>(264/325) |

- NB: Q4 19/20 data is for Jan & Feb 20 only. March audits not undertaken due to Covid-19
- Q1 20/21 Audit was cancelled by the PHA due to Covid-19
- There were **33** Hospital Acquired Pressure Ulcers reported in Feb 21. Of these, **6** were deep wounds i.e. Grade 3/4 U or DTI's, (2 South Med, 3 South (2), 3 North Med, & ED, CAH & Male Medical, DHH).
- In 20/21 Post Incident Reviews have been carried out on **68** cases to date with **31** deemed to have been avoidable. This represents **11%** of all Ward Acquired Pressure Ulcers reported in 20/21. The outstanding Post Incident Reviews (**3**) will be carried out in due course.

## Ward Acquired Pressure Ulcers & Rate per 1,000 Occupied Bed Days 2020/21:

|                           | April | May  | June | July | Aug  | Sept | Oct  | Nov  | Dec  | Jan  | Feb  | Mar | TOTAL | Rate 20/21 | Rate & No 19/20 |

The Run Chart below shows Patient Falls & Injurious Falls Rates per 1,000 Occupied Bed Days based on 28 Wards, captured by staff using the Falls Walking Stick & Datix.

- Falls Rate **6.14** (94/15,317 Occupied Bed Days) up from **5.86** (99/16,908) in Jan 21
- Injurious Falls Rate **0.52** (8/15,317 Occupied Bed Days) down from **0.59** (10/16,908) in Jan 21
- Cumulative Falls Rate for 20/21 stands at **6.27**, compared to **4.54** in 19/20

## **Acute SMT Report on Patient Experience and Adverse Incidents**

### **Introduction**

The attached report looks at complaints, compliments and adverse incidents for the month of February 2021 in Acute Services.

### **Key Messages**

#### Complaints

- There were 23 formal complaints received in February 2021.
- The 2 day acknowledgement target has been met at 100% for January complaints. With the ongoing 3th Surge the target of the 20 day response time has been 27% in February 2021. Some of the complaints are very overdue and would need further escalation for responses. Reminders have been sent from Governance Office and ongoing meetings are happening to try and facilitate a more timely response time.
- The top subjects of complaint for February 2021 were Quality of Treatment and Care with 9 and Staff Attitude with 9 also.
- At year to date the top subject of complaint is Quality of Treatment and Care with 109 formal complaints to date with Staff Attitude sitting at 90.
- Currently we have 4 new reopened complaints for February 2021. There has been an upturn in reopened complaints due to further issues more than incomplete first responses.

#### Compliments

There were compliments 34 recorded for the month February 2021. It is up to the Ward Managers/ staff to log any compliments received through the compliments portal on the intranet.

#### Incidents

- There was an decrease in incidents recorded in February 2021 to 600
- Patient Falls/ Accidents is the top incident for the period April 2020 to January 2021 contributing to 1159 incidents recorded. Behaviour including violence and aggression second with 1139 incidents.
- There were 95 in patient falls in the month of February on the Wards a decrease from January 2021.

| <div>Personal Information</div> | 16/02/2021 | Acute Services | Surgery and Elective Care     | Craigavon Area Hospital | 4 North             | patient day 0 post mastectomy - T1DM - fasting protocol taken down post surgery - with no follow up insulin prescribed. Patient normally on basal bolus regime with novorapid and lantus. Patient did not have insulin in her system since over night. CBG monitored this am and 27. Ketones then monitored = 4.7. DKA developed post surgery.   | Insulins   | Insulins | DKA identified during diabetes ward round. DKA protocol written up. Fluids prescribed and staff nurse to alert surgeons to carry out post op review and to contact F1 to carry out ABGs and U+Es and monitor patient. For patient to | Moderate | Patient Incidents | Medication/Biology/Fluids | Prescribing Process                   | Medication not prescribed                  | moderate      | moderate | possible | medium |
| <div>Personal Information</div> | 22/02/2021 | Acute Services | Medicine and Unscheduled Care | Craigavon Area Hospital | AMU                 | As handed over patient receiving both warfarin and clexane until patient INR was >2.5. When doing patient medications I noticed 3 doses of clexane had been missed, which was highlighted to consultant on the ward round - who indicated a IR1 to be completed as missing these doses with patients condition could have serious implications.  | Enoxaparin |          | Patient aware. Consultant made ware. Ward manager made aware.  | Minor    | Patient Incidents | Medication/Biology/Fluids | Administration to Patient             | Incorrect frequency of dose (omitted dose) | insignificant | moderate | possible | medium |
| <div>Personal Information</div> | 19/02/2021 | Acute Services | Pharmacy                      | Daisy Hill Hospital     | Pharmacy Dispensary | When dispensing a dossette it was noticed that a pack of Bisoprolol 1.25mg tabs was found to contain Digoxin 125 microgram tablets.  | Bisoprolol | Digoxin  | A new pack of Bisoprolol was removed from the shelf and used to dispense the dossette. The broken packs for both items were checked to ensure no other errors were identified.   | Minor    | Patient Incidents | Medication/Biology/Fluids | Storage Process (in pharmacy or unit) | Incorrect storage environment              | insignificant | moderate | possible | medium |
| <div>Personal Information</div> | 06/02/2021 | Acute Services | Medicine and Unscheduled Care | Craigavon Area Hospital | 1 South Medical     | Discharge prescription arrived in pharmacy with patient Kardex. 4 drugs were identified on the Kardex as new - doxycycline, carbocisteine 375mg, gliclazide tablets 30mg, furosemide 40mg. Patient had received these on the ward. Pharmacist queried with nurse on ward if gliclazide and furosemide were to be reviewed by GP as no information in letter. Also dose of gliclazide was unusual- 30mg twice daily. 30mg dose is only available as a modified release tablet and usually given once daily. Nurse had no information. Pharmacist telephoned house officer who had written the discharge script but house officer was unable to help and advised pharmacist to telephone Reg. Reg on call was able to confirm that patient should not be on carbocisteine, gliclazide or furosemide as patient was a re-admission with post-covid syndrome and had only been on these temporarily during last admission because also on dexamethasone and blood sugars elevated. Dose of gliclazide was incorrect. 30mg twice daily of the modified release tablet is equivalent to 160mg of standard formulation of gliclazide. | Gliclazide | none     | Advice was sought from the Reg on and the three drugs were taken off the discharge prescription. Only the antibiotic, doxycycline was dispensed.   |          | Patient Incidents | Medication/Biology/Fluids | Prescribing Process                   | Incorrect medication/flu                   | insignificant | moderate | possible | medium |

|                                 |            |                |                               |                     |                          |  |                        |            |   |               |                   |                           |                           |  |               |          |          |        |
|---------------------------------|------------|----------------|-------------------------------|---------------------|--------------------------|--|------------------------|------------|---|---------------|-------------------|---------------------------|---------------------------|--|---------------|----------|----------|--------|
| <div>Personal Information</div> | 09/02/2021 | Acute Services | Medicine and Unscheduled Care | Daisy Hill Hospital | Emergency Department DHH | Patient admitted to Daisy Hill Hospital from <div>Personal Information redacted by the USI</div> . MAR chart sent with patient. Documented on front of Kardex that tramadol, amitriptyline, isosorbide mononitrate, chlorphenamine and omeprazole stopped whilst in <div>Personal Information redacted by the USI</div> by MOOP. Isosorbide mononitrate had not been stopped, tramadol and amitriptyline doses had been reduced but not stopped and omeprazole had been changed back to esomeprazole.  | Isosorbide Mononitrate |            | Incident discovered 9/2/2021. Patient has been without these medications from 20/1/2021 with no ill effect. Isosorbide mononitrate restarted. GP pharmacist informed for medicines reconciliation.  |               | Patient Incidents | Medication/Biology/Fluids | Prescribing Process       | Not prescribed medication (reconciliation error) | insignificant | moderate | possible | medium |
| <div>Personal Information</div> | 09/02/2021 | Acute Services | Medicine and Unscheduled Care | Daisy Hill Hospital | Direct Assessment Unit   | Patient came to the DAU ward in DHH on 9/2/21 due to a GP referral for query DVT as they were complaining of left ankle swelling & left leg pain. The doctor looking after the patient took bloods, d-dimer and doppler. They documented that the doppler report showed evidence of a DVT in the left femoral vein. At this point the doctor approached me as the ward pharmacist to discuss prescription of apixaban to treat the DVT. I checked the patient's blood results, weight and calculated their creatinine clearance to confirm if apixaban would be a suitable treatment option. A prescription was then written for apixaban for treatment of a DVT (10mg BD for 7 days followed by 5mg BD for 6 months). After the prescription was dispensed and checked, I sent a referral through as normal for any new patients being started on a DOAC to the anticoagulation pharmacy team. On 11/2/21, when one of the anticoagulation pharmacists was processing the referral and uploading details onto DAWN she checked the doppler scan from 9/2/21 as this is part of DAWN criteria. When she read the report it said there was no evidence of DVT. They contacted me to highlight this. | Apixaban               |            | I immediately spoke to the ward consultant to highlight and discuss the error. The patient's notes and scan were checked which confirmed that a serious mistake had been made. The ward consultant contacted the nursing home and advised them to stop apixaban. The nurse from the NH informed him that the patient was well. The consultant tried to ring the NOK to inform them as well. The NOK did not answer but a message was left on 11/2/21 to make them aware of the incident. The consultant also spoke to a GP practice nurse who rang to know about the apixaban dose. He informed them to stop apixaban and the nurse will confirm with the nursing home as well. He also spoke to the Dr (prescriber) involved about the mistake, action taken and the learning points from the incident. The cause of this error, is that the doctor was looking at the patient's scan from 2018 which did show a DVT rather than the scan from 9/2/21. |               | Patient Incidents | Medication/Biology/Fluids | Prescribing Process       | Incorrect medication/fluid                       | insignificant | moderate | possible | medium |
| <div>Personal Information</div> | 23/02/2021 | Acute Services | Surgery and Elective Care     | Daisy Hill Hospital | High Dependency Unit     | Patient prescribed Bisoprolol 10mg OD, preadmission medication, prescribed correctly on Kardex each morning. Staff nurse made an error and placed signature in 10pm box, scribbled it out and wrote error. 2 nights later agency nurse looking after patient administered 10mg at night time, after patient already receiving morning dose - therefore received a double daily dose  | Bisoprolol             | Bisoprolol | Care taken over by S/N the following day found patients blood pressure to be low. Doctor informed, patient placed on bed rest, bisoprolol held for 24 hours.  | Insignificant | Patient Incidents | Medication/Biology/Fluids | Administration to Patient | Incorrect frequency of dose (extra dose)         | insignificant | moderate | possible | medium |

|                      |            |   |               |                               |                     |  |                |  |   |       |                   |                                 |                         |   |             |          |          |        |
|----------------------|------------|---|---------------|-------------------------------|---------------------|--|----------------|--|---|-------|-------------------|---------------------------------|-------------------------|---|-------------|----------|----------|--------|
|                      |            |   |               |                               |                     | SU admitted via ICS for 2/52 rehab at 18.30 hours on the 12.02.2021. Initially referral stated that the SU required 24 hour oxygen due to post Covid pneumonia. D2A referral stated that physio would order an oxygen concentrator which would be in place on SU's arrival. The senior staff member on duty received a verbal handover from the ward, she was advised that the SU no longer required oxygen as her SATS were 94, this was documented on the discharge letter. On admission clinical obs indicated that the SU's oxygen levels were 90. SU advised to rest, she was observed closely. When the rehab staff were carrying out their assessments SU's SATS dropped to 82 on exertion and 86 on rest. SU did not present with SOB. |                |  | Senior staff on duty contacted OOH, the doctor advised that the SU required oxygen therapy as a matter of urgency. Same sourced from a local pharmacy. The doctor advised staff to contact OOH if they had any further concerns about this SU. ICS staff have requested an urgent review with the respiratory team on Monday. Staff also advised by the doctor to check SU's both calves for swelling, ?? pulmonary embolism Same observed no swelling, redness or pain. Staff updated on changes and advised to report and record any changes or decline in breathing. |       |                   |                                 |                         |   |             |          |          |        |

| <div>Personal Information</div> | 08/02/2021 | Acute Service | Surgery and Elective Care     | Craigavon Hospital  | Orthopaedic Ward | On admission to recovery it was noted that critical medications (Madopar)that were prescribed for 1200 had not be administered prior to transfer to theatre. Student nurse was sent to ortho ward to collect critical medications. Staff on ward stated they had not been sent by care home and no stock on the ward. SN <div>Personal Information</div> contacted ward and spoke to nurse caring for patient involved. Nurse stated on phone that do to quick admission and being sent to theatre there was no time to source medication and administer it.   | Co-Beneldopa | Co-Beneldopa | Recovery staff attended MAU for the critical medication. (one of the 3 wards mentioned in critical medications policy). 1500 dose given as quickly and safely as possible following general anesthetic. Anesthetist Dr. Gupta was informed of missed dose. | Minor         | Patient Incidents | Medication/Biology/Fluids | Administration to Patient | Failure to administer                      | minor         | moderate | possible | medium |
| <div>Personal Information</div> | 14/02/2021 | Acute Service | Surgery and Elective Care     | Craigavon Hospital  | 3 South          | Patient was prescribed for morphine sulphate 2.5mg - 5mg IM/PO and received MST (continuous) 5mg   | Morphine     | Morphine     | Drs informed, bloods checked.  | Minor         | Patient Incidents | Medication/Biology/Fluids | Administration to Patient | Formulation of medicine was wrong          | insignificant | minor    | possible | low    |
| <div>Personal Information</div> | 05/02/2021 | Acute Service | Medicine and Unscheduled Care | Daisy Hill Hospital | Female Medical   | Patient A was admitted in FMW on the 5/02/21 at night time coming from ED.Staff Nurse reviewed the plan of care and medical team stated on the plan that he is for IV Gentamicin.It was prescribed in the medical Kardex,and stated see chart but no Gentamicin chart handed over. Contacted ED to check if there's a chart left in their ward. But nothing was found. Could not confirm whether patient A had it or not because there's nothing documented on ED notes. When the staff nurse looking after him checked his armband to give his prescribed medications, she noticed that the patient name was different. Incident was reported to the bed manager. Upon further investigation by bed manager, the name in patient A armband was patient B who was admitted as well last night in male medical. Patient B came in with UTI and was prescribed with IV Gentamicin as well. In view this, datix completed. (Gentamicin sample 08.30 5/2/21 2.22mg/l however ED advised gentamicin was administered in AC@H and no indication any dose administered in ED) | Gentamicin   |              | Bed manager informed and correct name band applied to patient A. Doctor to review whether patient needs Gentamicin prescribed as already on IV tazocin.  | Insignificant | Patient Incidents | Medication/Biology/Fluids | Administration to Patient | Incorrect patient                          | insignificant | minor    | possible | low    |

| Personal   | 01/03/2021 | 10:00 | Craigavon Area Hospital | Surgery and Elective Care     | GENSUR | UROSUR | 3 South                  | Minor         | Patient admitted to hospital and written up for pre-admission medication. This included their Flixotide 100microgram accuhaler. This was ordered by ward staff and subsequently Flixotide 500microgram accuhaler was ordered in error (high dose steroid inhaler). This was then administered by the patient twice daily for 5 days. I was completing a medication history on the patient and checking the patient's own drugs when I recognized the incorrect strength of accuhaler in the patients locker. I asked nursing staff if they knew whether the accuhaler was ordered from pharmacy whilst the patient was an inpatient which staff nurse confirmed it was supplied by hospital pharmacy and was ordered late last week. | I informed the patient that the wrong strength of accuhaler was ordered. I asked if the patient had suffered any side effects as a result (eg oral thrush)which the patient denied. I told them that I ordered the correct strength from pharmacy. I alerted the ward sister to this.  | see above   | Final approval | 15/03/2021 |

| Personal | 17/03/2021 | 08:00 | Craigavon Area Hospital | Medicine and Unscheduled Care       | GMMUC  | GENMED | 3 North Medicine         | Insignificant | <p>following confirmation of fractured Left Neck of Femur. Patient has extensive medical history involving 2 x urostomy insitu, ileostomy insitu, PICC Line insitu for TPN in community ( can be used for bloods and flush in hospital). Patient mobility restricted due to fracture. when personal care was given this morning by myself and another staff nurse we were shocked at the state of lines. nephrostomy bags had not been changed, the dressing were peeling and strike through was visible. Stoma bag had not been changed or cared, surrounding skin was inflamed. Old stoma site had a dressing insitu that had also not been addressed. Patient PICC Line dressing was also half peeled off site. Patient stated no one had done any care with PICC, only used for bloods and flush however, there is no written confirmation to indicate use on PICC documentation. Patient confirmed all of the above and was visibly upset discussing that none of these had been addressed and was worried that they were only being looked at now from initial admission. While care was being given, we found her sacrum and female areas and been caked in sudocream that had not been cleaned. once</p> | <p>myself and staff nurse addressed all concerns, contacted level 4 to receive correct supplies to change lines.</p> <p>Stoma bag was renewed and documented. nephrostomy (2) dressing were renewed. bags also renewed.</p> <p>PICC line assessed and flushed using ANTT, new PICC dressing and bio connector applied and documented.</p> <p>For skin issues, Aria mattress insitu, skin cleansed and barrier cream applied, repositioned for comfort and repositioning schedule updated, nursed from side to side to relieve pressure. Foodchart commenced. Dietician referral to be made. All risk assessments and documentation updated.</p> | <p>Poor care identified when reviewing nursing notes.</p> <p>So we are now doing our nursing handovers at bedsides and going through all patient charts to ensure completion and nothings missed. If so then it is highlighted there an then with nurse.</p> | Being reviewed |            |

| Personal | 24/03/2021 | 20:00 | Daisy Hill Hospital | Medicine and Unscheduled Care | GMMUC | STROKE | Stroke / Rehab            | Moderate      | <p>Patient discharged from level 4 stroke and rehab ward on 24.03.21 with an increase task to assist with feeding. Increase was agreed via email with community social worker on 24.03.21.</p> <p>Post discharge - hospital social worker was informed on 25.03.21 at morning MDT meeting that family phoned in at approx. 8pm to complain that careers would not assist with feeding due to no information in relation to modified diet or assist with medications in care plan.</p> <p>At point of discharge planning on 23.03.21 at MDT meeting hospital social work was informed feeding task required due to encouragement. Hospital social work was not informed of any SALT input. Hospital social work was not made aware of modified diet. Hospital social worker spoke with son and nephew on 24.03.21 and advised package of care would continue as per prior to hospital admission and to include feeding task due to encouragement- family was in agreement and no new needs or additional support needs identified.</p>   | <p>Hospital social worker completed a retrospective NISAT to reflect need for assistance with medications and feeding. Hospital social worker included information to advise community of modified diet in NISAT. Hospital social worker requested nursing staff to complete a medication management form to facilitate medication and modified diet in care plan.</p> <p>Hospital social worker emailed community social worker to advise of issues post discharge, actions to resolve issues and updated information provided in a NISAT.</p>   |   | Being reviewed |            |
| Personal | 24/03/2021 | 13:40 | Daisy Hill Hospital | Functional Support Services   | LOCNE | PORNE  | Occupational Therapy Dept | Insignificant | <p>At approx 13:10 a health care assistant came at the supervisors office asking for assistance. She informed me there was a lady sitting on a chair at the Occ Therapy doors with a head wound.</p> <p>I took a wheelchair to and assisted the HCA. Upon arrival I saw a lady sitting on a chair, very upset, holding a tissue to her head. There was a small amount of blood on the tissue.</p> <p>This lady was accompanied by her friend. I asked the injured party her name and what happened. She stated that she was clipped on the head by an ambulance door and that the driver took her to a seat, fetched her some water and then told her to wait there and she would be back in 15 minutes.</p> <p>After ascertaining what had happened, myself and the HCA took the lady to A+E. I helped book the lady in and assisted her in to the waiting room.</p> <p>Myself and the HCA then assisted her friend the main foyer to wait.</p> <p>At approx. 14:20 an ambulance driver called to the supervisors office. I asked her name and told her I had taken the lady to A+E as she had a head injury. Ambulance driver had said she was a 'green light driver'</p> | <p>Assisted HCA to injured person. Got person affected's name and brief description of what happened. Took the person to A+E and got her booked in.</p> <p>Took ambulance drivers name.</p>   | None.   | Final approval | 25/03/2021 |
| Personal | 24/03/2021 | 08:00 | Daisy Hill Hospital | Medicine and Unscheduled Care | GMMUC | ACUTE  | Female Medical            | Insignificant | <p>Resident was discharged from hospital after 8 days, diagnosis of left limb extensive DVT, likely recurrence of colonic cancer, catheter associated UTI. Letter and medication did not arrive back with the resident at 1700 - they arrived at 1900. Multiple changes to her medication during the hospital stay.</p>   | <p>When SN reviewing the discharge paper work states Morphine Sulphate (MST) 5mg MR - 5mg tablets twice daily. In addition, it stated Morphine Sulphate 10mg in 2mg 5ml oral solution when required. However, the subcutaneous prescription chart states Morphine Sulphate 2mg SC 4 hourly. Home Manager has tried to contact the ward to establish the preferred treatment but unable to get through. Staff have proceeded to administer the MST tablets and will try to contact the ward again, if required GP advice will be sought. Resident is not presenting in any pain at present but will be monitored closely until resolved.</p>   | <p>Discussed with staff at PSB of informing NH of medication changes.</p> <p>Discharge checklist implemented on ward.</p> | Final approval | 30/03/2021 |
| Personal | 24/03/2021 | 17:40 | Daisy Hill Hospital | Medicine and Unscheduled Care | GMMUC | REHAB  | Stroke / Rehab            | Insignificant | <p>DCW D.O. advised that SU had come home from hospital, the paramedics had left him sitting in the chair and he had no mobility at all. A daughter was in the house when they brought him home but the paramedics said SU will be ok. DCW unsure how to get him to bed also SU now needs to use thickeners. DCW were not written up or trained for that, DCW on text was informed only that SU has to be spoon fed. Family said that they cant feed because she is afraid. Family stated that they said to hospital as well that there is nobody to look after SU but he was still discharged</p>  | <p>I have phoned Daisy hill hospital spoke with nurse who stated completely opposite to family. Nurse stated that family insisted for SU to come home, SU was offered respite, but family insisted for SU to come home. I have phoned RESWS who asked the family to follow up with GP OOH to get their advice. Family stated that they instructed her how to feed SU. resws advised the family as well if they don't think SU is not safe to call the ambulance. DCW called back later but SU still at home family got him into bed, but nearly had a fall. NOK will stay till midnight but they will not phone the ambulance. There was a miscommunication, I am not to sure if that was a pure discharge.</p> |   | Being reviewed |            |

| Personal | 25/03/2021 | 13:35 | Daisy Hill Hospital     | Medicine and Unscheduled Care       | GMMUC  | REHAB  | Stroke / Rehab              | Insignificant | by SLT dept citing that 'social work or family were not informed about modified diet- family require more information in relation to groceries or meals required for this gentleman'. It also stated that this gentleman was discharged on the 24/03/21 and that carers refused to assist with feeding due to no information being available in relation to modified diet. Social work advised SLT to contact family to ensure they have appropriate guidance. A copy of SLT assessment was also requested by social work. SLT responded to social worker via e-mail and advised that SLT were aware that patient was pending discharge however there was no specific date regarding patients discharge in his notes. (However of note is that after SLT assessment on 24/3/21 - a Swallow Care plan for discharge was added to the Nursing Notes, written up in Medical notes and a Wall chart with swallow advice - but at that point there was no hospital discharge plan was in place.) The social worker was advised that the family had received previous telephone contacts from SLT however there was no contact from SLT was made this week (-wk beg 22nd March) On the 25/03/21 Lead Social work | contacted via telephone on 25/03/21 to provide a verbal update on the most recent recommendations on the swallow care plan which includes suitable food and drinks as per IDDSI descriptors as well as a written copy of these documents to be posted out and copied on email to social work department. All of the above completed however NOK did not answer phone call and therefore voicemail left. SLT team lead requested that social work re-contact NOK to discuss ongoing family concerns regarding discharge arrangements. Social work team lead advised on contacting family that she would also confirm if thickening powder for the patients drinks was present at home and if carers were now in a position to administer foods and drinks when she was liaising with the family. Liaison with DHH SLT and SLT Lead completed regarding this incident with agreement that other SLT colleague who would endeavour to make further telephone contact with NOK again in the absence of DHH SLT in the PM. SLT colleague completed second call to NOK on 25/03/21 PM - again with the purpose of explaining the swallow care plan  |   | Being reviewed |            |

| Personal | 25/03/2021 | 13:00 | Craigavon Area Hospital | Medicine and Unscheduled Care       | GMMUC  | ACUTE  | Ramone Ward 4               | Insignificant | Acute SLT department received a telephone call from patients NOK on Monday 22.3.21 following discharge from CAH on Friday 19.03.21. NOK expressed concern about having received a discharge prescription of Nutilis clear thickening powder and not having been given instructions on how to administer same. Domiciliary care workers involved in care were not able to administer thickened drinks as need for same had not been communicated. NOK expressed dissatisfaction that as a result she was having to visit multiple times per day to provide food /drinks. Acute SLT advised NOK that her mother had not been seen by our service during her hospital admission and therefore we were unable to give advice regarding the thickener prescription. Acute SLT signposted NOK to Ward 4 Ramone for further information. Escalated to SLT team Lead.  | clinical sister on duty in Ramone Ward 4 on 22.3.21. Clinical sister reported that patients baseline was Level 2 drinks and Level 5 foods and that she had continued to be offered same during her hospital stay however that she frequently refused thickened drinks and would have taken normal drinks. Clinical sister was unclear exactly where this information had been sourced. SLT team lead checked NIECR where there was a discharge report dated 27.1.21 from RVH stating level 2 drinks and Level 5 foods HOWEVER there was also an SLT report from RVH dated 1.2.21 stating that patient had chosen to have normal food and drinks and had accepted the risks and demonstrated understanding of same. Clinical sister reported the patient had not been referred to Acute SLT as she was deemed to be on modified food/drinks prior to CAH admission. The ward were of the understanding that thickener had been used at home previously by family. SLT requested that nursing staff contacted the NOK to explain. Ward manager contacted SLT on 23.3.21 to update that NOK has been contacted and was happy to continue to provide Level 2 drinks and Level 5 foods until | To ensure the patient and family have a full understanding of a modified diet and that all is documented correctly. | Being reviewed |            |

| Personal | 26/03/2021 | 08:15 | South Tyrone Hospital   | Surgery and Elective Care           | ATICS  | DPU    | Theatres/DPU STH         | Insignificant | an OGD, declined to give admitting nurse full medical history details as he felt all hospital notes from other trusts should be present and all medical history should have been known in advance and notes from Belfast and Dublin should be present. Patient became increasingly verbally aggressive in a loud tone and I came to assess the situation. Patient stated he has taken tea with milk before attending (7am) and I tried to discuss the risks of not fasting. The admitting nurse attempted to offer to defer the patient to the afternoon list, but patient would not let her speak. Patient very argumentative and would not let me answer or speak and continued to shout in a loud voice. He complained that he was not told where to park his car and that the hospital should have given him a layout of the building. He wanted to know why I had not researched his medical noted from Belfast and Dublin, again I could not respond as he was verbally aggressive. The theatre manager had been contacted and came to introduce herself at, patient stood at this stage shouted that he was being 'ganged up on.' Theatre manager requested for him to lower his voice and he declined and remained verbally aggressive. I | Nurse in charge was contacted Patient cancelled from list. fasting policy and procedure was attempted to be discussed with patient declined we value your views form. Attempted to discuss deferring procedure until safe. Explained zero tolerance policy   | Zero tolerance policy adhered too.  | Being reviewed                   |  |

| Description   | Action taken  |
|---|---|
| on completing skin check with pt noted g2 to right hip.   | first aid, dressing applied to pt. pt informed of same, nurse in charge informed, body map completed, pt placed on hospital bed for comfort.  |
| no one to take bloods for three south. leading to delays in discharges. And patient safety issue as bloods need to be handed over to night team.  | datix and escalated to sister in charge   |
| differentiated VIN<br>added to waiting list for surgery 22/10/2020<br>Given date or 31/12/2020 then list reallocated to another specialty<br>admitted 27/01/2021 for procedure - cancelled due to difficult first case and theatre over-run<br>admitted to Kingsbridge for surgery. Histology - cancer - 2 mm deep therefore will require lymph node dissection   | apologized to patient   |
| PT HAS PACEMAKER INSITU. This was not documented on safety section of referral and is therefore counted as a near miss.   | Referral cancelled. Ward informed to ask DR to send new referral with correct safety info documented.   |
| medications wrongly entered in clerk in<br>- apixaban, propranolol spironolactone and metformin, lansoprazole prescribed, not on preadmission<br>-wrong dose furosemide rx<br>-vte risk ass not filled in<br><br>given dose of propranolol which could have reduced heart rate  | spoke with ward SHO and FY1 and rectified Kardex<br>nursing staff reported drop in heart rate - patient given bed rest and ECG(background of hyperkalemia)                            |
| A DNAR form was completed on patient on 12/10/20 in ICU signed by Dr Raymond Mckee. This was not communicated to patient or his family at any stage. Patient's son contacted a member of our team after finding ambulance copy of DNAR form recently and was clearly distressed that they were not involved in this decision and neither informed regarding this. Patient has been in and out of hospital several times in last few months. | Phoned son, apologized and informed that we will inform the relevant team and complete and incident form as an educational opportunity to stop similar incidents happening in future. |

|---|---|
| <p>This gentleman was referred for an ERCP for a CBD stone in June 2019.</p> <p>Unfortunately, due to our significant backlog of OP ERCP's, this did not occur in a timely manner.</p> <p>This gentleman was readmitted with cholangitis while awaiting an OP ERCP in Jan 2021, nearly 1 year and 7 months after his initial referral, albeit with COVID affecting OP provisions through 2020.</p> <p>He has had a very stormy course with post ERCP pancreatitis and pseudocyst formation, likely due to an inflammatory CBD stricture he had developed from his initial MRCP in 2019 to his repeat MRCP in 2021.</p> <p>He was admitted on 25/01/21 and is still an inpatient.</p> <p>Main question is if he had been ERCP'ed in 2019, if this current situation could have been avoided.</p> | <p>To be actioned</p>   |
| <p>H&amp;C <small>Personal Information redacted by the USI</small> was seen by a consultant at ANC/GOPD ON 05/03/21 ?ectopic pregnancy</p> <p>Pregnancy test using clinitek machine number 295478 was negative</p> <p>Serun HCG taken<br/>Result 126</p>  | <p>Due to concern re possibility of ectopic pregnancy<br/>HCG had been taken<br/>10/03/21 Machine sent to lab for investigation</p> |
| <p>pt underwent complex caesarean section for placenta praevia<br/>MBL 2000mls<br/>mobilized slowly day 1<br/>fell whilst going to toilet<br/>fractured clavicle</p>  | <p>attended fracture clinic</p>   |

|   |   |
|---|---|
| <p>Patient with cognitive impairment got up without asking assistance from the staff, patient was confused and unsteady on his feet even with the rollator and requires close supervision. He went to the toilet on his own and had a fall. Staff heard noises in the toilet and he was found sitting on the floor. He claims he did not hit his head. Medics assessed patient.</p> | <p>Patient was assisted back to bed, NEWS: 0, Falls protocol commenced. GCS: 14/15 due to confusion. Assessed by medics and advised not requiring any scan at present. NOK informed. patient clinically stable.</p>   |
| <p>Patient from PNH, has G2 pressure sore to right inner buttock, dressing insitu from nursing home, no documentation about same from nursing home. For regular rounding to maintain skin integrity. Surrounding sacrum area blanching but intact.</p>  | <p>NIC informed, new dressing applied, for regular turns to maintain skin.</p>  |
| <p>Day 12 post Barnes Neville Forceps Birth of Baby Girl, discharged home initially 23.02. 2021 with haemoglobin 78g/l, however required readmission where she was transfused.</p> <p>During admission required psychiatric review due to behavior's on the ward discharged home with daily input from Home treatment Team, medication and constant adult supervision.</p>          | <p>Today, 05.03.2021, following home visit from Home Treatment Team the mother was found to be very unsettled and labile in presentation and despite medication was still unable to rest to allow health to improve thus requiring admission to Bluestone unit.</p> |
| <p>had clinical observation checked. i heard knocking on the door. <span style="background-color: black; color: white; padding: 0 2px;">Personal Information</span> was sitting on the ground. He stated that he could not control rollator and it run away on him</p>  | <p>Clinical observation recorded. full body check carried out. Fi contacted. falls protocol followed.</p>   |
| <p>patient prescribed and administered enoxaparin 90mg and apixaban 10mg and clopidogrel 75mg once daily on 6/3/21 at 10am on AMU ward CAH. Initially had been prescribed enoxaparin 90mg BD for PE, then switched to apixaban 10mg BD for one week on 6/3/21. However enoxaparin was not stopped on prescribing apixaban.</p>  | <p>I spoke to F1 Dr Caoimhe O'Neill, SHO DR Ahern and ward manager. Dr Ahern contacted haematology consultant. Advised for patient to be monitored overnight and to contact stroke re clopidogrel if it is to be held whilst on apixaban or continued.</p>          |

|  |   |
|--|---|
| <p>Patient in cub 7 in green transferred out to x-ray, was brought back from x-ray by two radiographers. Noted by nursing staff skin tear to back of (R) hand. When patient questioned she stated "her hand hit of door on way back from xray"</p> <p>Pace and body map completed prior to transfer and no injury noted to hand</p> <p>patient no history of confusion and coherent</p>  | <p>spoke with radiographer and advised him on what patient stated, denied any injury happening</p> <p>wound care and Steri-strips applied</p>   |
| <p>A delirious Insulin Dependent T2DM patient presented to ED on 5/3/21 at 22.10. Admitted medically and clerked in at 01.00 6/3/21, seen on weekend review 7/3/21 and by ward Dr's on the 8/2/21. Pharmacy IP ECR completed on 7/3/21 and documented in medical notes. I took over nursing care of this patient on 8/3/21 at 08.00 and during an independent check of information regarding podiatry for toe ulceration via NIECR, I incidentally discovered that the patient was Insulin dependent and that Novomix '30' BD had not been prescribed from admission. CBG's had been checked QDS by nursing staff and documented as a tablet controlled diabetic on 24 hour nursing admission booklet.</p> | <p>I immediately escalated the findings to the medical team at 11.15, whom had already seen the patient on the ward round that morning, and informed both the ward manager and ward pharmacist.</p> |
| <p>Took charge of ward to find that no HCA had been booked for 1:1 supervision of an extremely confused and aggressive patient. One HCA had to remain with the patient at all times as has a high risk of falls and is a danger to himself and others ( 2 security calls were required overnight for this patient) This left only 3 band 5 nurses and 1 band 3 HCA to cover the rest of the ward, which also included 2 other confused patients requiring close supervision. Due to concerns for patient safety, no further admissions could be accepted overnight.</p>  | <p>Bed manager contacted to inform of situation at beginning of shift, but no extra staff were available throughout the hospital to help out.</p>   |

|  |  |
|--|--|
| <p>Patient had unwitnessed fall at bedside. Loud noise heard and patient found on floor, fell out of chair and chair was on top of patient. Bleeding heavily from nose - found face down. Patient admitted to AMU on 07/03/21 at 04:30am and had 1:1 from PNH in attendance since then. since 20:00 on 09/03/21 no 1:1 provided. contacted PNH regarding same and they stated that they had informed social worker LH that they would no longer be providing staff for 1:1 and it was now up to the trust. same information not relayed.</p> | <p>Stopped bleeding from patients nose. Assisted off floor and into bed. NEWS and GCS recorded as per falls protocol. Medics informed. patients nose looks displaced - contacted PNH to ask if this is how it looked previously or not. IV analgesia given as nose appears to look broken.</p> |
| <p>Infection attributable to specified work (schedule 3 No.27)</p> <p>tested positive Covid19</p>  | <p>Reported to OH</p> <p>Tested at Kernan Testing station</p> <p>Isolating</p>   |
| <p><small>Personal Information</small> old lady with gelhorn pessary in situ from july 2019. It is not embedded and unable to be removed.</p> <p>clinic appointment at 4 months post insertion did not happen</p>  | <p>d/w next of kin, happy for it to stay and understand risks</p>  |
| <p>Infection attributable to specified work (Schedule 3 No 27)</p> <p>Tested positive for Covid19</p>  | <p>Referred to Occupational health</p> <p>Staff member isolating</p>   |
| <p>pressure damage noted on right ear and right elbow, both grade 2. patient is known to district nurses and is receiving treatment for same.</p>  | <p>encouraging pressure alleviating care where possible and assisting patient with mobilization.</p>   |

|  |   |
|--|---|
| <p>HDU</p> <p>Initially had a CT abdomen reported out of hours reported by everlight radiology system: Conclusion; The main findings consist of pancreatic swelling associated with oedematous changes and peripancreatic infiltration in favour of signs of acute pancreatitis.</p> <p>The patient was very unwell. Surgeons had felt initially was not acute pancreatitis as amylase normal. As clinical picture didn't fit our team re-approached the surgeons who discussed the images (48hours after admission) with our DHH radiology team at X-ray meeting and reviewed by consultant radiologist and initial radiology report amended:</p> <p>The case was discussed at surgical meeting. There is also a residual collection in left paracolic gutter measuring 3.6 cm in transverse diameter and 12 cm craniocaudally .</p> <p>There has been significant interval change in density of hepatic parenchyma since previous CT dated 21st January202 consistent with</p> | <p>Surgical/medical and radiology teams aware As discussed I advised I would complete a datix to raise awareness of significant error made by this everlight radiology reporting system missing this significant collection</p>   |
| <p>Infection attributable to specified work (schedule 3 No 27)</p> <p>tested positive Covid19</p>  | <p>Referred to OH</p> <p>Tested at Kernan testing station</p> <p>Isolating</p>  |
| <p>patient admitted to 2 south. on skin check noted extensive bruising, g2 to right buttock, dti to sacrum/buttocks. yellow bruising to upper body. abdo folds red and raw. ? ungradable pressure ulcer to right calf area. extend of skin breakdown not detailed form ed nurse handover. see current body map for more details.</p>   | <p>full head to toe examination</p> <p>sr to refer to TVN</p> <p>barrier cream applied to skin where appropriate, await mattress upgrade.</p> <p>? need for vulnerable adults form, ward manager aware and clinical sister. Not handed over that same was completed in ED</p> |
| <p>Patient's CT scan was approved by radiologist and patient was brought for scan, which was performed, however neither the radiologist or radiographers realized the patient had been scanned during the night for the same scan.</p>   | <p>Reported to CT Lead, Radiologist, site lead and referring clinician.</p>   |

|   |  |
|---|--|
| Grade 2 pressure ulcer on left heel   | adhesive foam dressing placed on same heels raised off bed with blanket. [Personal Information] aware of grade 2, states she has had it but it had been healed                     |
| [Personal Information] gentleman, BIBA following DSH- cuts to wrist and TLNWL.<br>Triaged on arrival.<br>Dr attempted to see patient, no answer when called from waiting room, mobile no. went direct to voicemail, no answer from NOK, security searched premises and not found.   | Missing person proforma completed and PSNI made aware.   |
| Patient came for anti-D appointment but was not on clinic list. Upon investigating it was discovered that patient had been recorded as 'deceased' and all further antenatal appointments had been cancelled as a result.  | Medical records contacted and asked to rectify mistake. patient given anti-d and all future appointments reinstated.   |
| CSF samples from Male Medical at DHH taken on consecutive days for two patients listed ([Personal Information redacted by the USI] and [Personal Information redacted by the USI]) were not labelled. Unlabelled samples are not normally accepted by the laboratory for analysis. Due to risk of repeat sample of this type samples were analysed and verbal report only issued. | Ward was informed and verbal report was given for immediate management of patient(s). However laboratory will not stand by results and they will not be recorded on LABS or NIECR. |
| Needlestick injury while disposing of arterial line (hollow) needle used on patient. Wearing gloves.  | First aid<br>Patient risk assessed by another colleague<br>Blood taken for storage   |

| <p>Upon getting a 200mg labetalol tablet from the tablet box it was noted there were different sizes in the container - a mixture of 100mg and 200mg tablets.</p>   | <p>Pharmacy advice sought - tablets disposed of and new 200mg box ordered.</p>   |
| <p>Was contacted by patients sister on the DN out of hours phone who informed me that her sister had been discharged from hospital yesterday evening the 16/3/21 on clexane following surgery. She had been shown how to use the clexane just once and deemed by staff to be competent however when she got home she wasnt sure she was doing it right and instead of administering 1 40mg injection she gave herself 3 in an attempt to ensure it was going in right. Patients sister was advised to phone District Nursing to come out and administer clexane injection today. I advised patients sister that I would like to phoe OOH GP for advice on giving a further injection after she has taken 3 times her dose and advised I would ring back. Patients sister advised OOH were contacted last night and advised she would be ok.</p> | <p>Contacted OOH GP and gave details of incident. OOH GP phoned me back and explained the incident with the patients clexane. GP I spoke with asked that patient be brought into ED to have urgent bloods checked including coag before administering any further clexane. Contacted patients sister and advised that patient needs to go to ED to have her bloods done. She is going to take her now. I advised if clexane to be given for staff in ED to refer to DN regarding this.</p> |
| <p>Patient had an unwitnessed fall, this morning, a student observed patient already on the floor, she had sound of bang and saw patient laying on the floor.</p>   | <p>Observed for any injury and returned to bed: neuro observations done as per protocol, X-ray obtained, doctor's review obtained, patient's son informed.</p>   |

| <p>Security heard shouting banging coming from ambulance triage room beside porters office. Went to check it out and seen a male patient who seemed drunk. Patient wet out for a smoke and then a short time after ED staff informed us he had gone missing. Security went to look for him but never found him. ED staff informed us he had went to Bluestone unit. Nursing staff from Bluestone escorted him back to ED. At approx. 1830 ED staff requested security assist with opening the ambulance triage door and the male patient had locked it from the inside. Door was opened with a master key and when medical staff entered the room the patient had wrapped something around his neck to harm himself. Patient was moved by ED staff to red resus. Security called again for the male patient who had just left ED. Patient walked out the door and down the main road. Nursing staff called the police.</p> | <p>Security called</p>  |
| <p>PATIENT ADMITTED 13/03/21. RIGHT BUTTOCKS INTACT AT TIME OF ADMISSION. GRADE 2 NOTED ON 17/03/21</p>  | <p>REPORTED TO DEPUTY SR, DRESSING APPLIED, ZERO PRESSURE TO BUTTOCKS APPLIED, REPOSITIONING CHART MAINTAINED. BODY MAP AND BRADEN IN ADMISSION BOOKLET UPDATED</p>   |
| <p>Patient attended ED following an overdose &amp; stating thoughts of life not worth living. CAMHS referral should have been completed prior to discharge however this was not done. Patient has discharged with no Mental Health assessment and no Mental Health follow up for support.</p>  | <p>Notified Sister in ED &amp; Doctor's involved in patient care requesting a CAMHS referral is completed urgently.</p>   |
| <p>I sent the syringe driver to EBME DEPT FOR REPAIR, it went via internal post and lost</p>   | <p>checked in postal department and EBME department, from last week,</p>  |
| <p>Patient got up to use urinal at side of bed. Lost balance and slid down the wall onto the floor. unwitnessed by staff.</p>  | <p>checked for injury, minimal assistance given to stand up, sat back down in chair. News and GCS taken, doctor informed and assessed patient, CT brain already booked from WR-await same. Family to be informed, no answer at present.</p> |

| Personal Information redacted by the USI  | delivered   |
| <p>Personal Information</p> <p>old admitted with DKA and commenced on paediatric protocol. Admitted to Blossom Unit under the care of acute medical team as no adult medical beds available. I was contacted by the Paediatric Registrar to inform me that the incorrect bad of fluids had been administered in ED despite appropriate prescription by medical staff. It was noted on the patient's arrival to the ward that 5% Dextrose + 20mmol KCl had been administered (instead of the 0.9% NaCl + 20mmol KCl that had been prescribed) and the batch numbers on the fluid chart and on the fluid bag did not match.</p> | <p>Fluids immediately taken down and appropriate fluids administered. Immediate review by paediatrics registrar and explanation given to family. ED contacted and informed of error</p>   |
| Patient admitted from home with DTI and Grade 2 on sacrum. Contacted district nurse who is unaware of same  | Mattress ordered, dressing insitu, pressure sore prevention pathway in place with skin bundle. TVN referral completed.  |
| <p>Prescribing error in ED Yellow Area: Isosorbide mononitrate M/R 50mg BD prescribed and then the 50mg dose was written over and changed to say 100mg. Dose signed for at 10pm on 20/3/21 and at 10am on 21/3/21.</p> <p>Drug history completed and patient should only be on 100mg ONCE daily in the morning.</p>   | <p>Pharmacy technician highlighted error on Kardex to pharmacist in ED Yellow Area. Pharmacist informed nurse in charge and also nurse looking after patient. Advised hourly observations.</p> <p>Pharmacist corrected the prescription. Datix submitted.</p> |
| <p>Patient admitted TO ED, FROM GP as ulcerated right leg</p> <p>ulcer to right lower leg being treated for one year to skin and swelling more painful than usual</p>   | referred to surgical team for admission and treatment, for antibiotic therapy   |
| patient has bilateral PE's , had covid vaccine astra Zeneca 12/02/21  | <p>Yellow card completed as requested by Dr Moan</p> <p>Patient now being treated with therapeutic enoxaparin and decision regarding anticoagulation still to be made</p>   |

|   |   |
|---|---|
| <p>Patient arrived from the care home with two staff members, the MRI safety form had been filled out and signed by staff nurse from the home in the NOK section. Patient wasn't competent therefore MRI staff rang his sister to check the safety form for any contraindications to MRI. She said he had a gastric band operation in Belgium and head surgery, neither of which were mentioned on the MRI safety form completed by the staff nurse or on the initial request form sent in by the referring dr.</p>   | <p>The patient had to be sent back to the care home without the scan as we had no information on either surgery. Care home staff were informed as to why the patient couldn't have the scan done.</p>   |
| <p>Pt was found in carpark of hospital by bystander acting bizarrely. same brought into ED. then absconded after triage.</p>  | <p>porters were there at time of absconding. absconding protocol commenced. psni contacted. pt guardian/home informed. sister aware. events documented in notes.</p>  |
| <p>Patient discharged from level 4 stroke and rehab ward on 24.03.21 with an increase task to assist with feeding. Increase was agreed via email with community social worker on 24.03.21.</p> <p>Post discharge - hospital social worker was informed on 25.03.21 at morning MDT meeting that family phoned in at approx. 8pm to complain that careers would not assist with feeding due to no information in relation to modified diet or assist with medications in care plan.</p> <p>At point of discharge planning on 23.03.21 at MDT meeting hospital social work was informed feeding task required due to encouragement. Hospital social work was not informed of any SALT input. Hospital social work was not made aware of modified diet. Hospital social worker spoke with son and nephew on 24.03.21 and advised package of care would continue as per prior to hospital admission and to include feeding task due to encouragement- family was in agreement and no new needs or additional support needs identified.</p> | <p>Hospital social worker completed a retrospective NISAT to reflect need for assistance with medications and feeding. Hospital social worker included information to advise community of modified diet in NISAT. Hospital social worker requested nursing staff to complete a medication management form to facilitate medication and modified diet in care plan.</p> <p>Hospital social worker emailed community social worker to advise of issues post discharge, actions to resolve issues and updated information provided in a NISAT.</p> |

Mental health patients should not be placed in rooms with locks.

A more suitable pathway for mental health patients should be implemented.

We would benefit from a specific security service that can stay with patient to help prevent them from absconding as patient had previously absconded numerous times.

# CORPORATE RISK REGISTER

## August 2020

## **INTRODUCTION**

The SH&SCT Corporate Risk Register identifies corporate risks, all of which have been assessed using the HSC grading matrix, in line with Departmental guidance. This ensures a consistent and uniform approach is taken in categorizing risk in terms of their level of priority so that proportionate action can be taken at the appropriate level in the organization. The process for escalating and de-escalating risk at Team, Divisional and Directorate level, is set out in the Trust's Risk Management Strategy.

Each risk on the Register has been linked to the relevant Corporate Objectives contained within the Trust's Corporate Plan 2017/18 – 2020/21 as detailed below:-

### **Corporate Objectives**

- 1: Promoting safe, high quality care.
- 2: Supporting people to live long, healthy active lives
3. Improving our services
4. Making the best use of our resources
5. Being a great place to work – supporting, developing and valuing our staff
6. Working in partnership

Risk scoring is based on likelihood and impact as summarized in the Risk Assessment Matrix below.

| Risk Likelihood Scoring Table         |              |  |  |
|---------------------------------------|--------------|--|--|
| <b>Likelihood Scoring Descriptors</b> | <b>Score</b> | <b>Frequency</b><br>(How often might it/does it happen?)                   | <b>Time framed Descriptions of Frequency</b> |
| <i>Almost certain</i>                 | 5            | Will undoubtedly happen/recur on a frequent basis                          | Expected to occur at least daily             |
| <i>Likely</i>                         | 4            | Will probably happen/recur, but it is not a persisting issue/circumstances | Expected to occur at least weekly            |
| <i>Possible</i>                       | 3            | Might happen or recur occasionally   | Expected to occur at least monthly           |
| <i>Unlikely</i>                       | 2            | Do not expect it to happen/recur but it may do so                          | Expected to occur at least annually          |
| <i>Rare</i>                           | 1            | This will probably never happen/recur                                      | Not expected to occur for years              |

| Likelihood Scoring Descriptors | Impact (Consequence) Levels |           |              |           |                  |
|--------------------------------|-----------------------------|-----------|--------------|-----------|------------------|
|                                | Insignificant(1)            | Minor (2) | Moderate (3) | Major (4) | Catastrophic (5) |
| Almost Certain (5)             | Medium                      | Medium    | High         | Extreme   | Extreme          |
| Likely (4)                     | Low                         | Medium    | Medium       | High      | Extreme          |
| Possible (3)                   | Low                         | Low       | Medium       | High      | Extreme          |
| Unlikely (2)                   | Low                         | Low       | Medium       | High      | High             |
| Rare (1)                       | Low                         | Low       | Medium       | High      | High             |

### OVERVIEW OF CORPORATE RISK REGISTER AS AT AUGUST 2020

|            |               |             |                |              |

**CORPORATE OBJECTIVES: 1 & 4 – PROMOTING SAFE, HIGH QUALITY CARE & MAKING BEST USE OF**

|  |  |  |                               |                          |
|--|--|--|-------------------------------|--------------------------|
|  |  | year   | Internal Audit                |                          |
|  |  | 6. Trust wide communication to all managers to remind all in respect of timely completion of paperwork                                       | Assistant Director of Finance | 6. Global communications |
|  |  | 7. Trust active participation in a number of regional groups to provide guidance, assistance and challenge to achieve necessary improvements | Finance Directorate           | 7. Minutes of meetings   |

### Additional actions and timescales

1. Progress updates continue to be provided to Audit Committee and from October 2018 onwards, BSO have been providing a written report in advance of each Audit Committee. An updated progress report prepared by BSO which covers all outstanding recommendations will be presented at February 2020 Audit Committee. Mid-year review of BSO Payroll remains limited.
2. Ongoing review of Internal Audit recommendations. For those that are the responsibility of the Trust, they will be picked up and reported on at the IA Forum initially before going to Audit Committee.
3. Ongoing attendance at Customer Forums and Business as Usual meetings.
4. Ongoing attendance of Director of Finance at Customer Assurance Board which has been established to oversee 3 new payroll workstreams in an attempt to address the issues.

### CORPORATE OBJECTIVES: 1 & 4 – PROMOTING SAFE, HIGH QUALITY CARE & MAKING BEST USE OF RESOURCES

| <b>Likelihood: Likely (4)</b><br><b>Impact: Moderate (3)</b><br><b>Total Score: 12</b><br><b>Risk Rating: MEDIUM</b><br><b>Previous Score: 12</b> |  | <b>RISK OWNER: Director of Human Resources and Organisational Development</b>  |                                  |  |
|---|--|--|----------------------------------|--|

New report developed for managers at all levels to be able to report on Requisition Requests in Progress (i.e. not yet approved) in order to minimize delays at this stage</p> |  | <p>Selection Framework and associated guidance for Managers</p> <p>12. Notes of Planning meetings/action plans</p> <p>13. New website operational from 14<sup>th</sup> January 2019</p> <p>14. Requisition Requests Overview Report</p> |
|--|--|---|--|---|

### Additional actions and timescales

1. Significant piece of work to be undertaken in conjunction with service directorates to further streamline corporate waiting lists and Trust approach to maintaining these. The start date for this has been delayed due to the need to divert resources to Transformation activity. Alternative models of recruitment have been discussed and tested as part of the regional SRIF group, and implementation has started in the Trust for some groups of staff (Admin & Clerical posts; Nursing Assistants) but requires further planning prior to wider implementation for other high-volume staff groups during 2020/21.
2. Engagement events with key stakeholders organised via the regional SRIF group throughout 2019/20, to ensure their continued involvement in the process of design and implementation of solutions.
3. Roll out of Recruitment and Selection skills training for managers during 2020/21.
4. Launch of HSC 'branding' and advertising concepts to increase applicant traffic to the recruitment website is the subject of ongoing discussion with DOH in relation to funding and HSC-wide implementation. Timescale for this is outside the control of the Trust.

### LINK TO CORPORATE OBJECTIVE - PROMOTING SAFE, HIGH QUALITY CARE

| <b>Likelihood: Likely (4)</b><br><b>Impact: Major (4)</b><br><b>Total Score: 16</b><br><b>Risk Rating: HIGH</b><br><b>Previous score: 16</b><br>The National Cyber Security Centre (NCSC) has indicated that Cyber attack is very likely to affect the UK and is a high level National Risk |  | <b>RISK OWNER: Performance and Reform Directorate (Cybersecurity Lead)</b><br>While this risk will be led by P&R from a cybersecurity assurance perspective, this risk is a corporate risk requiring ownership by Directorates as follows: <ul style="list-style-type: none"> <li>• <b>Performance &amp; Reform Directorate</b> (in relation to assurance of 'technical' ICT <b>DEFEND &amp; RECOVER</b> / back up processes)</li> <li>• <b>Medical Directorate</b> (in relation to lead role in assuring effective Emergency Planning)</li> <li>• <b>Operational Directorates</b> (in relation to assurance of effective Business Continuity Plans to <b>RESPOND</b> to potential incidents)</li> </ul>  |  |   |
|---|--|---|--|---|
|   |  | <b>DATE RISK ADDED: July 2017</b><br><b>Reworded: June 2018</b>   |  |   |
|   |  | <b>TIMESCALE FOR REVIEW OF CONTROLS: Monthly</b>  |  |   |
| Risk No.  | Risk Description   | Key Current Controls  | Who monitors the control?  | How is it evidenced?  |
| 2   | <p>The key risk emanating from a cyberattack is potential for <b>significant business disruption</b>.</p> <p>Information security across the HSC is of critical importance to delivery of care, protection of information assets and many related business processes. If a Cyber incident should occur, HSC information, systems and infrastructure may become unreliable, not accessible (temporarily or permanently), or compromised by unauthorised 3rd parties, including criminals. This could result in unparalleled HSC-wide disruption of services due to the lack of/unavailability of systems that facilitate HSC services</p> | <p><b>1.REGIONAL:</b> In the context of Northern Ireland, with a single Health and Social Care structure, and also a single HSCNI network, with Regional diagnostic services and NIECR, the impact in Northern Ireland of a cyber attack affecting the Network or Regional Data Centres has been assessed as potentially a National Civil Contingency (NCSC). Therefore, critical to managing risk at local level is the work progressed at regional level to mitigate risk through the <u>Cybersecurity Programme Board</u> and the extant policy and processes for <u>Regional Emergency Planning</u> led by the Chief Medical Officer.</p> <p>Letter from Permanent Secretary 11<sup>th</sup> Feb 2019 - all Investment &amp; implementations decisions on Cyber Security across the HSC must receive advanced approval from</p> | <p>1. Regional Cyber Security Programme Board (Director P&amp;R) established 2<sup>nd</sup> May 2018.</p> <p>2. Regional Cyber Security Officers Forum established in June 2018. First meeting January 2019 - meetings scheduled bi-monthly.</p> | <p>Minutes of meetings</p> <p>This Group makes recommendations to Regional Programme Board<br/>Minutes of meetings and Action List – all papers posted onto SharePoint.</p> |

|  |  |   |   |   |
|--|--|---|---|---|
|  | <p>(e.g. appointments, admissions to hospital, ED attendances or diagnostic services such as Labs or NIPACs) or data contained within.</p> <p>This could lead to a range of impacts or core service areas for example:</p> <ul style="list-style-type: none"> <li>• Service disruption impacting on operational service delivery including waiting times, delayed urgent clinical interventions, suboptimal clinical outcomes etc.</li> <li>• Risks in the ability to deliver safe care in the community, for example, accessing electronic records for the c. 5,000 clients in receipt of domiciliary care.</li> <li>• Potential for unauthorised access to Trust systems or information (including clinical/medical systems), theft of information or finances, breach of statutory obligations.</li> <li>• This could potentially bring liabilities for the Trust including potential fines and reputational damage.</li> </ul> | <p>Regional Cyber Security Programme Board.</p> <p><b><u>2.LOCAL - TRUST LEVEL CONTROLS:</u></b></p> <p>If information systems are not available, the Trust needs to consider contingencies to accessing information on patients, clients, care packages in the community etc</p> <p>Current controls to DEFEND, RESPOND and RECOVER are as outlined below.</p> | <p>Trust Internal Cyber Security Task and Finish Group has been established to take forward recommendations of internal reports as appropriate in line with regional Cyber Security Programme Board</p> | <p>Minutes of meetings and Action List - all papers posted onto SharePoint.</p> |
| <p><b>Additional actions and timescales</b></p> <p>There are three aspects to the management of this risk within the Trust, as outlined below.</p> |  |   |   |   |
|  |  | <b>Key Current Controls</b>   | <b>Who monitors the control?</b>  | <b>How is it evidenced?</b>   |

|  |   |   |   |   |
|--|---|---|---|---|
|  | <p><b>1. DEFEND:</b> To maximise the Trust's technical defences to minimise the risk of a cyber attack;</p> | <p><b>1. <u>Technical Infrastructure</u></b></p> <ul style="list-style-type: none"> <li>• HSC security hardware (e.g. firewalls)</li> <li>• HSC security software (threat detection, antivirus, email &amp; web filtering)</li> <li>• Server / Client 'Patching' regime</li> <li>• 3rd party Secure Remote Access</li> <li>• Data &amp; System Backups</li> </ul> <p><b>2. <u>Policy, Process</u></b></p> <ul style="list-style-type: none"> <li>• Regional and Local ICT/Information Security and Incident Management Reporting Policies and Procedures All Trust IT Policies updated and approved at Scrutiny Committee - July 2019.</li> <li>• Data Protection Policy</li> <li>• Change Control Processes</li> <li>• User Account Management processes</li> <li>• Disaster Recovery Plans</li> <li>• Awareness raising</li> </ul><br><ul style="list-style-type: none"> <li>• IT Risk training for senior managers (advanced) and front line staff (basic).</li> </ul><br><ul style="list-style-type: none"> <li>• Resources – 2017/18 -SMT agreed financial resources for Internal Cyber Security Team to support progress of Priority 1 actions from Internal Audit and Foursys report.</li> </ul><br><ul style="list-style-type: none"> <li>• Regional Network Security Review</li> </ul> | <p>Head of IT</p><br><p>Bi-monthly reporting to Cyber Task and Finish Group and Quarterly Reporting to Governance Committee</p><br><p>Regional Policy – not yet developed</p><br><br><br><br><br><br><br><p>Head of IT</p><br><br><br><br><br><br><br><p>Network Security</p> | <p>IT Self-Assessment against NCSC10 Steps (I)</p><br><p>IT Audit (I)</p><br><p>Network Information Systems (NIS) self-assessment carried out &amp; submitted to 'Competent Authority' in May 2019</p><br><p>Technical Risk Assessments, or Penetration Tests (E)</p><br><p>FourSys (Network Security Expert) Report May 2017</p><br><p>Findings of Phishing Exercise reported to SMT</p><br><p>Cyber assimilated event in January 2018. | <p><b><u>Policy, Process</u></b></p> <p>Regional Security Policies currently being developed. Work underway with Cyber Teams and Deloitte.</p> <p>The following recommendations remain outstanding to maximise technical defences (subject to funding and regional approval as per Permanent Secretary letter):</p> <p><b><u>Priority 2:</u></b><br/>Incident Management (Regional Cyber Incident Response Plan was agreed at Regional Cyber Programme Board 6/12/2019. Launch was planned for March 2020.<br/>Monitoring (being considered as regional procurement through Cyber Programme)</p> <p><b><u>Priority 3:</u></b><br/>Secure Messaging is on the regional Cyber workstream list for 2020/21<br/>Education and Awareness (Regional Cyber Security E-learning module has been created. Currently being reviewed by a test group of users before it can be signed-off by the Regional Cyber Security Programme Board</p> <ol style="list-style-type: none"> <li>1. Vulnerability scanning is ongoing, but is not licenced for full Trusts assets – this was increased to 15,000 devices in March 2020, but Trust has almost double this. Raised at Regional level – cannot report on full vulnerabilities.</li> <li>2. In addition, the level of vulnerabilities raised is placing demands on the ICT Operational to manage risk. There is not enough resources to do this. A paper is being produced by the Head of IT to identify resource gaps.</li> <li>3. Project Team continues to progress the implementation of recommendations made by 3 Internal Audits.</li> </ol> |  |                             |                                  |                             |
|  |  | <b>Key Current Controls</b> | <b>Who monitors the control?</b> | <b>How is it evidenced?</b> |

|--|---|---|---|--|
|  |   |   |   |  |
|  | <p><b>3. RECOVER:</b> To test and improve 'Back up and Recovery' of critical information systems in the Trust and BSO to be assured that in the event of a cyber attack, data can be recovered by IT as quickly as possible to minimise impact on services.</p> | <p>There are 3 levels of restore available</p> <p>PC Level; Application and Server.</p> <p>PC restore is fully tested; Application level and Server restore require agreement to bring down specific systems which has not yet been performed in the Trust. However there have been system upgrades and outages that have required the IT team to restore. Therefore there is some level of intelligence for a range of applications and servers.</p> <p>Additional disaster recovery infrastructure has been purchased and to be installed in Daisy Hill Hospital for virtual servers (Zerto) – testing to be scheduled.</p> | <p>IT Controls Assurance Board (CAB) meets weekly</p> <p>Head of IT</p> | <p>Minutes and full audit trail from LanDesk.</p> <p>Task &amp; Finish Group</p> |

#### Additional Actions Planned and Timescale

**CORPORATE OBJECTIVE: PROMOTING SAFE, HIGH QUALITY CARE**

| <b>Likelihood: Almost Certain (5)</b><br><b>Impact: Moderate (3)</b><br><b>Total Score: 15</b><br><b>Risk Rating: HIGH</b><br><b>Previous score: 15</b> |  | <b>RISK OWNER: Director of HROD and Medical Director</b>  |   |  |
