Urology Department

Ms Helen Walker
Directorate of Human Resources
Craigavon Area Hospital Group Trust

Dear Helen

You will remember my speaking with you one year ago on the subject of remuneration for work performed in excess of contractual obligations and expectations. I had been advised and requested to do so by Mr. Templeton, Chief Executive. You requested that I submit to you an outline of the reasons for and the nature of this additional work. The delay in doing so is directly related to the amount of extracontractual work performed.

The genesis of the necessity to work significantly in excess of contractual obligation lies in the fact that on my appointment as a Consultant Urologist in July 1992, I was the only Urologist providing a service for the population of 300,000 of the Southern Health and Social Services Board Area. At the time of my appointment, I was the sixth Urologist appointed to Northern Ireland, resulting in a Urologist : population ratio of 1:250,000. This is the worst Urologist : population ratio in Western Europe, where the ratio is consistently 1:50,000. There are now still only eight Urologists in Northern Ireland, an improvement in the ratio to 1:200,000, but still far short of that which has been proven for years to be necessary. The Northern Ireland ratio, which is identical to that of the Republic of Ireland, is the worst in the UK. The UK ratio is currently 1:130,000, six years after the Ministry of Health accepted the recommendations of the Collins Report that each unit of population of 250,000 - 300,000 should be serviced by a urological unit staffed by three Consultant Urologists. The Southern Health Board should have appointed three Consultant Urologists in 1992 to meet the Government's modest standards. The Southern Board Area requires six Urologists to meet international standards.

These standards are in sharp contrast to those which have pertained in the Southern Board area to date. My appointment in 1992 was the culmination of a successful struggle between Craigavon Area Hospital and the Southern Health Board. Given international standards, it is quite incredible that that struggle should have centred around the issue of whether the area required the appointment of even one Urologist. However, given that the Board would still probably balk at accepting British, never mind international, standards, then their stance was not

so surprising. The appointment of a Urologist at Craigavon was an achievement. However, even before taking up the appointment, I realised that there was a permeating belief that the appointment of one Urologist, if so difficult to achieve, must therefore have been adequate, if not more than adequate. Before taking up my post, I was so aware that I would be deluged with an amount of need that would be impossible to provide for. I vividly recall being shocked to learn prior to my arrival that General Practitioners had been written to, informing them of my appointment.

Therefore, I arrived in 1992, with an expectation that I would provide a urological service, in circumstances devoid, then and still, of any awareness of not only the global urological needs of the population but even the urgent needs of patients for a service for cancer, obstructive stone disease and acute urinary retention. There was ample evidence of this lack of awareness. the Board for its part allocated £60,000 to fund the service for the year 1992-93! The Board's 'Making Choices' policy document predicted that the urological bed requirement for the area would increase to 9 by 1997!

For the hospitals part, I was fortunate to have a bed allocation of 22. However, for the first year, I had one Junior House Officer most times and a Senior House Officer. I shared a General Surgical Registrar. I did not even have a Personal Secretary appointed. It took one year to actually justify having a Secretary appointed, for whom we still do not have full-time Audio-Typist support. One year after appointment, it was extremely difficult to gain acceptance that a single Urologist providing a service for 300,000 would require a Registrar.

It is most important to understand that all this describes only the background to and the circumstances of my work since appointment. Put must succinctly, I arrived at Craigavon to find that urology was synonymous with TURP, and even that had not always been a happy experience. I started to provide a service from scratch. More importantly, I started with Medical and Nursing Staff who were starting from scratch. During the past four years, we have established a wide range of services that are standard urological services, but which were wholly new to Junior Medical and Nursing staff. Examples of these are male catheterisation by Nurses and self catheterisation, flexible cystoscopy and videourodynamics, ureteric stenting and ureteroscopic lithotripsy, intravesical chemotherapy and systemic chemotherapy, immunotherapy and radical prostatectomy, radical cystectomy and orthotopic reconstructive surgery, urinary diversion and the management of impotence, incontinence and infertility. These services brought into our care acutely ill and seriously ill patients requiring intensive and high dependency care. It brought with it a need for high patient turnover. Perhaps most significantly, it brought with it highly dependent patients dying of urological disease.

On appointment, I found that virtually every facet of urological patient care had to be explained, discussed, taught, supervised, checked and rechecked by me. This applied to Nursing Staff, Recovery Staff, Ward Staff, Outpatients Staff and Junior Medical Staff. For the first two years, I was in effect Nurse, Junior House Officer, Senior House Officer and Registrar as well as Consultant. During this time, I committed endless hours explaining diagnoses, prognoses and management to patients and their relatives, as I was the only one able to do so. This was a seven day week occupation. With the administration entailed in coping with every increasing demand, superimposed upon this clinical commitment, I spent 70-80 hours per week at work during this time.

In particular, I would go to the hospital at 10pm on Saturday nights to work throughout the night at administration. I did so in order to spend the daytime hours at weekends with my family. In almost four years, I have had nine weeks off work : two weeks in April 1993 to move house from Dublin and three weeks to attend urological meetings abroad and to which I had been invited. In almost four years, I have had only four weeks of holiday with my family. This was not due to some form of workaholism or some kind of inefficiency. When you are the only Urologist serving 300,000 people, you cannot tell a patient who needs his/her kidney or bladder removed for cancer that the operation will be performed in a month's time when the holiday is over. It proved impossible to do so when there were several patients in the same situation. I believe that the necessity of such a commitment is reflected in there not having been a single case of litigation pursued during the past four years, though justified complaints have been received.

Even with this order of commitment, it proved just respectably possible to cope with the most urgent needs. As a consequence, those with less urgent needs awaiting treatment grew greater in number and waited ever increasingly longer. As a result, the Patient's Charter criteria were recurrently not met.

Along came waiting list initiatives. These were performed in January to March 1994 and 1995. These two waiting list initiatives earned for the Trust an additional £230,000 approx. both were executed without additional medical staff. Both periods brought me to the limits of endurance. I shall not attempt to find words to describe those periods. The facts speak for themselves.

As a single handed Consultant, I had six operating sessions, two outpatient sessions, one/two flexible cystoscopy sessions and two urodynamic sessions per weeks, before examining a patient, talking to a relative, dictating a letter or performing emergency surgery at night. Unknown to me, in February 1995, my wife kept a record of the number of hours spent at work that month. The weekly average was 89 hours. In June 95, the same average had fallen to 66 hours.

....4/

In January of this year, I was relieved to know that the Trust would earn a further additional £90,000 with the assistance of a second Consultant, Mr. Baluch. Since Mr. Baluch's [redacted], the fixed sessional commitments have increased to twelve per week, in order to hopefully meet the Patients Charter criteria this year.

The extent of the totality of the urological service provided at Craigavon was brought home to me on reading the citation for the runner-up in the Lorex Synthelabo UK Urologist Team of the Year 1995. The three Consultant department at Morriston Hospital, Swansea, were commended for its high throughput during the year 1994-95 : 1837 inpatients, 1725 day cases and 1150 outpatients. Our corresponding figures during the same year were 1058, 560 and 2700.

In addition to all this commitment and performance, I have initiated and seen against some adversity, academic urology flourish. In our fourth year of operation, we have currently our second Research Fellow conducting doctorate research. In addition, we are developing probably the first, voice activated, clinical data base with artificial intelligent, neural networks. I have founded and seen develop Craigavon Urological Research and Education. For these activities, I seek no remuneration.

I regret the length of this letter. In it, I have sought above all to explain why such an extent of extracontractual work was a necessity. I believe the Trust, the Board and the Area have benefitted significantly. I too have gained great satisfaction at our achievements to date. These achievements have been hard earned by me, and more particularly, my family.

I feel that it would be reasonable to seek remuneration for work so significantly in excess of any contractual obligations. I sincerely believe, after much consideration, that it would be unreasonable and unfair, not to be awarded some remuneration for consistent, extracontractual work which varied from 25 to 50 additional hours per week, excluding lost holidays.

I tried every recipe of increasing efficiency during the past four years, in order to reduce the working week. Perhaps another could have done the job in less time. Perhaps another could have halved the additional commitment to 12-25 hours per week. If so, such hours would still have been a significant extracontractual commitment.

In seeking remuneration, I am mindful of the Trusts budgetary deficit, which may have been worse in the absence of my additional commitment. After much consideration therefore, I believe it would be reasonable to request that I be remunerated in the form of two additional sessions per week, retroactively from 6 July 1992, when my appointment commenced.

....5/

Dear Mr O'Brien

Further to the discussions which we have had, I now wish to confirm the Trust's intention that you will be offered 5.5PA's in recognition of additional workload over and above the 10 Programmed Activities that constitute your standard contractual duties under the New Consultant Contract. The additional PA's are reflected in the job (copy attached).

In the event of you deciding to transfer to the new contract, the requirement for you to undertake additional PA's will be reviewed annually as part of your job plan review. Termination of the contract for additional PA's is subject to a three month notice period and will have no effect on your main contract of employment. It should be noted that additional programmed activities are not subject to pay protection arrangements.

The Trust is also making you an offer of an ex gratia payment of Personal Information redacted by the USI in recognition of your extra contribution during the period 1998 until inception of the new contract.

Following discussion with your Clinical Director, your on call category has been determined as 'A' with your on call commitment being 1 in 2.

It is important to appreciate that this proposed offer is based on the understanding that the attached job plan schedule is a reflection of the time commitment given as a team member to HPSS work during 2004/05. Your acceptance will be taken as confirmation of this and also of the accuracy of the attached declaration of external duties/private practice which you have been involved in.

Text

Since I would like to get this matter finalised, I would be grateful if you would indicate in writing to the Office of the Medical Executive, whether you wish to progress to the next stage on the basis outlined above. In that event, I will make arrangements for Finance to finalise their calculation and for HR to prepare the necessary formal contract documentation. Your final acceptance of the contract will, of course, be subject to confirmation at that stage.

Yours sincerely

13 July 2006.

Dr. Ian Orr,
Medical Director,
Office of the Medical Executive,
Craigavon Area Hospital Group Trust.

Dear Ian,

Re: New Consultant Contract Offer and *Ex Gratia* Payment.

Thank you for your letter of 10 July 2006. I write to confirm that I am pleased to accept the Trust's offer of 5.5 sessions of Programmed Activities, in recognition of additional workload over and above the 10 sessions that constitute my standard contractual duties under the New Consultant Contract. I also confirm my acceptance of your determination of my on-call category and commitment.

I also write to confirm my acceptance of the Trust's offer of an *ex gratia* payment of [Personal information redacted] in recognition of my extra contribution during the period from August 1998 until inception of the New Contract. Pursuant to Section 74 of the Finance Act 1988, I should be pleased if you would have confirmed that this amount shall be paid gross of all income tax, statutory or other deductions.

Lastly, I wish to avail of this opportunity to compliment you for the resolve with which you approached the above matters, and to thank you for the fair and balanced manner in which you conducted recent discussions. I do believe that the outcome is fair to both Trust and both consultant urologists. I do hope that the Trust also believes it to be so. I am pleased that these issues have been resolved to our mutual satisfaction, and that all can look forward to working together, with renewed vigour, to further develop urological services,

Yours Sincerely,

Aidan O'Brien,
Consultant Urologist.

Subject: Ex Gratia Payments

Ian

re the above, I have checked out my understanding with colleagues and I was correct that in most cases ex gratia payments should be declared as taxable income, even though in some examples the payment may be defraying expenditure incurred on the part of the individual , obviously in the case of Urology it isnt, as it's supposed to represent payment for work done and should be declared for tax, if not already taxed through the payroll system which in this case it will have been already.

I am awaiting an answer re whether it is superannuable and will pass this on once received.

L

74. - (1) In section 188(4) of the Taxes Act 1988 (tax not chargeable by virtue of section 148 of that Act in respect of the first £25,000 of a payment on termination of office or employment etc.) for "£25,000" there shall be substituted "£30,000".

(2) Paragraphs 4 to 7 of Schedule 11 to that Act (relief by reduction of tax on next £50,000 of such a payment) shall cease to have effect.

(3) This section shall apply to any payment treated by section 148(4) of that Act as income received on 6th April 1988 or any later date, unless a notice is given in relation to it in accordance with paragraph 12 of that Schedule (payments in pursuance of pre-10th March 1981 obligations).

17 July 2006.

Mr. J. Templeton,
Chief Executive,
Craigavon Area Hospital Group Trust,
Craigavon Area Hospital,
Craigavon,
BT63 5QQ.

Dear John,

I do hope that you will have received a copy of my letter of 13 July 2006, addressed to Dr. Ian Orr, Medical Director, accepting the Trust's last New Cunsultant Contractual offer, and the *ex gratia* payment in recognition of my additionally working as a Registrar up to inception of the New Contract.

Now that both issues have been satisfactorily resolved, I would like to enquire again whether it would be possible to receive an advance payment. For a number of reasons, about which I would be happy to discuss with you, it would make an enormous difference if it were possible to receive an advance payment, of even a relatively small amount, before the end of July.

I would be most grateful if you would advise me whether this is possible

Yours Sincerely,

Aidan O'Brien,
Consultant Urologist.

Dear Mr O'Brien

Transfer to Consultant Terms and Conditions of Service (Northern Ireland) 2004

Further to previous correspondence, I have pleasure in now enclosing two copies of a new Contract of Employment based on the above terms and conditions of service, effective from 1st April 2004, along with a copy of your agreed Job Plan schedule.

In addition to your full time contract, separate documentation is also enclosed to cover the Additional Programmed Activities agreed for the financial year 2004/05 and the period up to the present. As previously indicated, in signing this documentation you are confirming that the proposed offer is based on the understanding that the attached job plan schedule is a reflection of the time commitment given as a team member to HPSS work during 2004/05 and up to the present. You are also recognising that future payments for work undertaken will be in accordance with the provisions of this contract.

It is important to appreciate that in future your Job Plan will be a prospective plan which will include details of the expected number of clinics, etc to be delivered, based on a minimum of 42 working weeks per year. Future Job Plans will also incorporate the objectives agreed at your annual appraisal including agreed service objectives.

Both the main Contract of Employment and Contract for Additional Programmed Activities should be signed and returned to me by as soon as possible in order that arrangements can be made for the necessary salary adjustment to be processed.

I do recognise this has been a very slow process and I would, therefore, like to thank you for your co-operation to date.

Yours sincerely

STRICTLY PRIVATE & CONFIDENTIAL

Mr A O'Brien
Consultant Urologist
CAH

Dear Mr O'Brien

Contract for Additional Programmed Activities

In accordance with Clause 7.6 of your main Contract of Employment and in recognition of additional workload, the Trust has agreed to offer and you have agreed to undertake Additional Programmed Activities over and above the ten which constitute your standard contractual duties. The Additional Programmed Activities should have been incorporated into your Job Plan schedule.

Remuneration for Additional Programmed Activities is covered by Clause 21 of your main Contract of Employment and Schedules 13 and 14 of the Consultant Terms and Conditions of Service (Northern Ireland) 2004, as amended from time to time. It should be noted that Additional Programmed Activities are not pensionable.

The contract for Additional Programmed Activities will commence on 1 April 2004 and will be reviewed as part of your annual Job Plan Review. As previously indicated in the correspondence from the Trust's Medical Director, termination of this contract for Additional Programmed Activities is subject to a three months notice period. While the next review has inevitably been delayed as a result of the time taken to resolve the existing Job Plans, this review will take place at the earliest opportunity. Additional Programmed Activities are not, of course, subject to pay protection arrangements.

Yours sincerely

Specialty:	Urology

Contracted Programmed Activities:	**10 PA's**
Additional Programmed Activities:	**5.5**
Management Allowance (if applicable): Medical Director / Clinical Director	**N/A**
Total Programmed Activities:	**15.5**
On- Call Category:	**Category A**
On-call Frequency:	**1 in 2**

CRAIGAVON AREA HOSPITAL GROUP TRUST

Statement of Main Terms and Conditions of Employment

CONSULTANT APPOINTMENT

THE POST

1 Consultant

Your job title is Consultant Urologist

Your employing organisation is Craigavon Area Hospital Group Trust.

2 Commencement Of Employment

Your continuous employment for the purposes of this contract began on 6th July 1992.

Your continuous service for the purposes of the Employment Rights (Northern Ireland) Order 1996 began on 6th July 1992.

Schedule 1 of the Terms and Conditions of Service contains guidance on commencement of employment.

3 General Mutual Obligations

Whilst it is necessary to set out formal employment arrangements in this contract, we also recognise that you are a senior and professional employee who will usually work unsupervised and frequently have the responsibility for making important judgements and decisions. It is essential therefore that you and we work in a spirit of mutual trust and confidence. You and we agree to the following mutual obligations in order to achieve the best for patients and to ensure the efficient running of the service:

- to co-operate with each other;
- to maintain goodwill;
- to carry out our respective obligations in agreeing and operating a Job Plan;
- to carry out our respective obligations in accordance with appraisal arrangements;
- to carry out our respective obligations in devising, reviewing, revising and following the organisation's policies, objectives, rules, working practices and protocols.

THE WORK

4 Location

Your principal place of work is Craigavon Area Hospital. Other work locations including off site working may be agreed in your Job Plan where appropriate, e.g. for supporting professional activities and some direct clinical care such as audit notes. You will generally be expected to undertake your Programmed Activities at the principal place of work or other locations agreed in the Job Plan. Exceptions will include travelling between work sites and attending official meetings away from the workplace.

You may be required to work at any site within your employing organisation, including new sites.

5 Duties

5.1 Main Duties and Programmed Activities

Except in emergencies or where otherwise agreed with your manager, you are responsible for fulfilling the duties and responsibilities and undertaking the Programmed Activities set out in your Job Plan, as reviewed from time to time in line with the provisions in section 6 below.

5.2 Associated Duties

You are responsible for the associated duties set out in Schedule 2 of the Terms and Conditions of Service.

5.3 Objectives

The purpose of including agreed personal objectives in your Job Plan is to set out in clear and transparent terms what you and your clinical manager have agreed should reasonably be achieved in the year in question. These objectives are not contractually binding in themselves, but you have a duty to make all reasonable efforts to achieve them.

5.4 On-Call Duties and Emergency Responses

You may also be required to participate in an on-call rota to provide emergency cover (see section 9). When not on an on-call rota, we may in exceptional circumstances ask you to return to site for emergencies if we are able to contact you. You are not, however, required to be available for such eventualities. Where emergency recalls of this kind become frequent, we will review the need to introduce an on-call rota.

6 Job Planning

Your clinical manager has drawn up an outline job description that sets out your main duties and responsibilities, along with an initial work

Inpatient Operating 2013 - 2016

2013:	Job Plan	70 sessions
	Actual done	113
2014:	Job Plan	70 sessions
	Actual done	101.25
2015:	Job Plan	70
	Actual done	95.5
2016:	Job Plan	61
	Actual done	83.25

All of this additional operating was directed to those patients in most need.

All of this additional operating resulted in scores of patients having less poor outcomes than they would have had otherwise.

There remain 30 patients on my waiting list at risk of suffering poorer clinical outcomes as a consequence of their delayed admissions.

Elective Day Case Surgery 2012 – 2016

The obligation defined in my Job Plan has been to undertake two Elective Day Surgical Sessions per calendar month, with the expectation that four cases would be admitted per session.

Performance

2012:	Job Plan	42 weeks 19.38 elective day case sessions
	Actual	25 sessions
2013:	Job Plan	42 weeks 19.38 elective day case sessions
	Actual	20 sessions
2014:	(Urologist of the Week introduced in September 2014)	
	Job Plan	39.5 weeks 18.23 elective day case sessions
	Actual	23 sessions
2015:	Job Plan	35 weeks 16.15 elective day case sessions
	Actual	20 sessions
2016	(Until commencement of Sick Leave on 16 November 2016)	
	Job Plan	30.5 weeks 14.07 elective day case sessions
	Actual	17 sessions

Job Planned Sessions: 87.21 elective day case sessions
Actual Sessions: 105 sessions

Additional sessions = 17.79

Job Planned Patients: 349 patients
Actual Patients: 482 patients

Additional patients = 133

Additionality

Each additional session is 4 hours of operating:	71.16 hours
Each additional session required one hour to arrange:	17.79 hours
Each additional session preceded by 0.5 hours to consent:	08.90 hours

Total additional time allocated to elective day case operating 2012 – 16:

= 97.85 hours

Mean additional time allocated to elective day case operating per week:

= 0.52 hours

Lead Clinician of MDT & Chair of MDM

I was appointed Lead Clinician of Urology MDT and Chair of Urology MDM on 01 April 2012.
I held the post of Lead Clinician of Urology MDT until 31 December 2016.
I chaired every MDM from April 2012 until the introduction of a three person rotation for chairing MDM in September 2014.
The numbers of cases discussed at each MDM was limited to 40.
Chairing MDM requires the Chairperson to preview all cases for discussion.
This task was made all the more taxing due to failure of clinicians to provide clinical summaries of all cases, as is required.
Previewing each MDM required 3 to 4 hours of time depending upon the numbers discussed.
MDM was followed by proof reading outcomes prior to them being sent to GPs.

Additional Time spent previewing and proof reading MDMs chaired: (allocating a mean total of 4 hours per MDM)

2012: 31.5 weeks: MDM x 25 = 100 hours = **3.17 hours per week**

2013: 42 weeks: MDM x 44 = 176 hours = **4.19 hours per week**

2014: 39.5 weeks: MDM x 35 = 140 hours = **3.54 hours per week**

2015: 35 weeks MDM x 17 = 68 hours = **1.94 hours per week**

2016: 30.5 weeks MDM x 16 = 64 hours = **2.09 hours per week**

In addition as Lead Clinician, I brought the SHSCT Urology MDT from one which did not meet any National Cancer Plan target in 2012 to one that did not have a single case outside target timelines in 2015 when Peer Reviewed.
During the years as Lead Clinician, I established and secured agreement for all urological cancer referral and clinical management pathways.
I wrote and secured agreement for the MDT Operational Policy by having Business Meetings on alternate months.
I lead the SHSCT Urology MDT through National Peer Review in June 2015 and through the Peer Review update in September 2016.

All of these duties of Lead Clinicianship required a minimum of **1 additional hour of time allocated every week from April 2012 to September 2016.**

The mean additional time allocated to MDT and MDM from 2012 to 2016 per week = 3.9 hours.

O'Brien, Aidan

From: Haynes, Mark
Sent: 22 May 2018 13:31

Subject: Urology Waiting Lists

Importance: High

Dear Esther

I write to express serious patient safety concerns of the urology department regarding the current status of our inpatient theatre waiting lists and the significant risk that is posed to these patients.

As you are aware over the past 6 months inpatient elective activity has been downturned by 30% as part of the winter planning. This has meant that for our speciality demand has outstripped our capacity for all categories of surgery. In reality this has meant that Red Flag cases have been accommodated, with growing times from referral to treatment and increasing numbers of escalations / breaches. However, only limited numbers of clinically urgent non cancer cases have been undertaken with waiting times for these patients increasing significantly. These clinically urgent cases have also been subject to cancellation on occasion due to bed pressures. Routine surgery has effectively ceased. As you are aware there are staffing difficulties in theatres which renders it likely that there will be ongoing reduction in elective capacity. This is likely to disproportionate impact on Urology as we have, as a speciality, three 4 hour theatre sessions which take place as part of extended days and it is these sessions that will not be running.

The clinically urgent cases are at a significant risk as a result of this. Included in this group are patients with urinary stone disease and indwelling urethral catheters. The progressive waiting times for these patients are putting them at risk of serious sepsis both while waiting for surgery and at the time of their eventual surgery. In addition for the stone disease patients, their surgery can be rendered more complicated by development of further stones and / or encrustation of ureteric stents. The clinically urgent category also includes patients who are at risk of loss of kidney function as a result of their underlying urological condition (eg benign PUJ obstruction). Many of these patients are recurrently attending A&E and having unscheduled inpatient admissions with urinary sepsis while awaiting their inpatient surgery. Catheter related sepsis is a significant risk and all catheterised patients on our waiting lists are at risk of this, the recognised mortality risk for Catheter associated sepsis is 10%. Patients with stone disease and other benign urological conditions which affect upper urinary tract normal functioning are at risk of losing kidney function and consequently renal failure. The current duration of our waiting lists means significant numbers of patients are at risk of loss of renal function and consequently these patients are at a risk of requiring future renal replacement therapy. Duration of ureteric stenting in stone patients is associated with progressively increasing risk of urosepsis, and it's associated risk of death, as a post-operative complication. This risk has been quantified as 1% after 1 month, 4.9% after 2 months, 5.5% after 3 months and 9.2% after greater than 3 months. Currently our waiting lists have significant numbers of patient who have had stents in for in excess of 3 months and therefore our risk of post-operative sepsis is significant and is continuing to grow.

Tragically, a 70 year old male patient died this weekend following an elective ureteroscopy. He had a stent inserted in early March as part of his management of ureteric stones and was planned for an urgent repeat ureteroscopy. This took place 10 weeks after initial stent placement. He subsequently developed sepsis and died on ICU 2 days after the procedure. While this may have happened if his surgery took place within 1 month of insertion of the stent, and there will be other factors involved (co-morbidities etc), his risk of urosepsis was increased 5 fold by his waiting time for the procedure.

Unless immediate action is taken by the trust to improve the waiting times for urological surgery we are concerned that another potentially avoidable death may occur.

The private sector does not have a role to play in the management of this problem (previous experience) and the trust needs to therefore find a solution from within. We are aware that while our waiting times are far longer than is clinically appropriate or safe, other specialities have far shorter waiting times with waits for routine surgery being far shorter that our clinically urgent waiting times. Given the risk attached to these patients and the disproportionately short waiting times in other specialities one immediate solution is to have specialities with shorter waiting times 'give up' theatre lists to be used by the urology team until such a point as these waiting times come back to a reasonable length (less than 1 month for all clinically urgent cases).

Looking at our current waiting list there are currently approximately 550 patients in the clinically urgent category, waiting up to 208 weeks at present. In order to treat these patients we would require a minimum of 200 half day theatre lists. We would suggest the target should be 4 additional lists per week in order to treat this substantial volume of patients and this would therefore need to run for at least a year in order to bring the backlog down to an acceptable level (waiting time less than 1 month). It may require a longer period / more sessions as patients continue to be added to the waiting lists and demand outstrips our normal capacity. This requirement is on top of our full complement of weekly inpatient theatre sessions (11). With regards staffing of these lists we currently have 2 locum consultants providing sessions in the department and these individuals could be used in order to deliver the surgery or back fill other activity so the 5 permanent consultants can undertake the additional lists. In addition the department need a longer term increase in available inpatient operating in order to match demand. Clearly the above would not tackle the routine waiting list.

Once again, we would stress that without immediate action to start treating these patients there will be a further adverse patient outcome / death from sepsis which would potentially not have occurred if surgery had happened within acceptable timescale.

Ieam happy to meet to discuss timescales to implement the changes required.e

Yours Sincerely

Mark Haynes

Discussed at Urology MDM 10.03.16. Personal Information redacted by the USI 's prostate biopsies have shown no evidence of prostate cancer and his MRI is satisfactory. Mr Haynes to review in outpatients and recommend ongoing PSA monitoring.

Diagnosis: TCC Bladder pTa Grade 3
Staging:

MDMUpdate

CONSULTANT MR YOUNG: 71 year old man referred with history of visible haematuria and right loin pain. He has associated lower urinary tract symptoms in the form of poor flow and nocturia x 3. He has past medical history of diabetes mellitus since 1998 for which he is on Pharmacological therapy. He also has hypertension, osteoarthritis and an episode of angina in January 2006. He has been a long term chronic smoker up until three years ago. His renal function was normal on 25th September 2013. His PSA from the same date was 0.38ng/ml. Flexible cystoscopy, showed two areas of bladder growth, one on the posterior wall and the larger one occupying the anterior bladder wall. CT Urogram, 15.10.13 - Too small lesions identified in the bladder. No malignancy in the upper tracts seen. Electively admitted on 23.11.13 for TURBT. Multifocal TCC. 2 X 1cm ng plus multiple pin head TCC posterior wall. Pathology reported bladder mucosal biopsies in which there was a papillary transitional cell carcinoma of WHO Grade III. There was quite marked cauterisation artefact making interpretation difficult however unequivocal invasion into the subepithelial tissue was not identified. Discussed @ Urology MDM, 05.12.13. This gentleman has been found to have a high risk, superficial transitional cell carcinoma of his bladder on recent resection. For review by Mr Young to advise readmission in January 2014 for further resection. Electively admitted on 21.01.14 for TURBT which showed substantial recurrence despite TURBT in November. Pathology showed transitional cell carcinoma, invasive, Grade III, at least pT2. Discussed @ Urology MDM, 06.02.14. This gentleman's most recent bladder tumour resection has found muscle-invasive disease. He requires staging by way of CT Urogram, CT thorax and bone scan. To be reviewed at Histology Clinic. Attended histology clinic on 03.03.14. Staging CT Urogram, CT thorax and a bone scan were requested. CT C/A/P - 12.03.14 - Focal thickening urinary bladder wall in keeping with known TCC (muscle invasive). No metastasis seen. Bone scan - 14.03.14 - No evidence of bony metastasis. Discussed @ Urology MDM, 20.03.14. There has been no evidence of metastatic disease on recent imaging performed for staging of this gentleman's muscle invasive bladder carcinoma. For review by Mr O'Brien on 21.03.14, to discuss prospect of radical cystectomy. Patient attended for review, accompanied by his brother. His significant, comorbid status has consisted of systemic hypertension since 2005, angina in 2006, diabetes since 1998, dyslipidaemia since 2010, mild peripheral neuropathy in 2009 and upper GI symptoms of which he has remained free since H. pylori was eradicated in 2012. However, he could be considered fit for cystectomy until proven otherwise. He is not enthused by the prospect of having a urostomy, but could be persuaded. He would prefer to have orthotopic bladder replacement (there has been no suspicion of urethral pathology). A lesser preference would be chemo radiotherapy. Discussed @ Urology MDM, 27.03.14. Refer to BCH surgeons for discussion of orthotopic bladder replacement and cystectomy. MRI penis, 18.02.16 - 1.2 cm lesion within the corpus spongiosum and a possible further smaller distal lesion. No evidence of cavernosal involvement. No pelvic lymphadenopathy. The appearances are probably of T2 N0 disease. Penile biopsy, 01.03.16 - Histological examination shows fragments of papillary transitional cell carcinoma which are non-invasive (pTa) and are WHO Grade II. There is no lymphovascular invasion identified. There is no carcinoma in-situ identified. Muscularis propria is not present within this tissue.

MDMAction

Discussed at Urology MDM 10.03.16. Mr Personal Information redacted by the USI has had a previous Cystoprostatectomy for muscle invasive bladder cancer. He now has urothelial cancer on the penile urethra which is G2Ta (at least) on pathology but clinically and radiologically suspicious of invasive (T2) disease. For OP review with Mr Young to discuss Urethrectomy, arrange CT Chest abdomen and pelvis, central MDM discussion and referral.

CONSULTANT MR HAYNES: 65 year old with carcinoma of prostate gleason 3+3 diagnosed in 2008, 1 out of 10 cores positive. Since then he has been on Avodart and Tamsulosin for his lower urinary tract symptoms. PSA was 4.26 in March 2008, 10.47 in August 2008. Biopsies performed in July 2008, Gleason 6 in 1 core and suspicion in another. PSA 1.52 in April 2009, 1.04 in August 2010, 0.68 in May 2011 & 1.13 in June 2012. Investigations- Transrectal prostatic biopsy 10.07.12 - Histology of part 1 - part 6 shows similar features. Histology exhibits benign prostate glands within a fibromuscular stroma. There is no PIN or malignancy. Discussed @ Urology MDM 19.07.12. Whilst this man has been found to have no evidence of prostate carcinoma on this occasion he did have previously. To be reviewed by Mr O'Brien in August 2012 to be advised to continue with active surveillance consisting of PSA levels 6 monthly and for regular review. PSA increased to 3.25 in August. Advised to stop dutasteride. Repeat PSA in November 2012. Review in Thorndale December 2012. PSA levels have varied since Dutasteride was discontinued in August 2012. PSA 5.31 May 2014. Has since discontinued Tamsulosin. Tadalafil 5 mgs daily ineffective. Continues to have intermittent left flank pain. CT Abdomen and Pelvis requested. Alprostadil 10 ugs injected, with no response. Prescribed increased dose of Tadalafil 10 mgs daily. For injection of 20 ugs Alprostadil on 06 June 2014. Patient reported at review on 06 June 2014 that injection of Alprostadil 10 ugs had resulted in an modest erectile response lasting less than 1 hour. Injected and prescribed Alprostadil 20 ugs when required, in addition to Tadalafil 10 mgs daily. To continue on active surveillance. For review July 2014. Personal Information redacted by the USI has remained on active surveillance for his Gleason 6, prostate carcinoma. He is due surveillance scans and biopsies. MRI, 28.01.16 - No radiological evidence of a significant peripheral zone tumour. Small indeterminate low T2 signal lesion nodule in the left mid gland transition zone. The history of lower back pain is noted. Imaging of the lumbar spine has not been performed. It is unlikely that this patient has skeletal metastatic disease. However, if there is clinical concern, a lumbar spine MRI can be performed at your request. Transrectal prostatic biopsy, 01.03.16 - All cores show no evidence of PIN or invasive malignancy.

MDMAction

Discussed at Urology 10.03.16. Personal Information redacted by the USI's recent surveillance MRI shows no radiological progression of his prostate cancer and his surveillance biopsies show no evidence of prostate cancer on this occasion. Mr Haynes to contact Mr Personal Information redacted by the USI and recommend ongoing surveillance.

Diagnosis:

Staging:

MDMUpdate

CONSULTANT MR HAYNES: This 74 year old has been known to have systemic hypertension since 1980, mild mitral and tricuspid valvular regurgitation since 1996 and diabetes since 2004. She had carcinoma of her left breast diagnosed in 2011, and managed by left mastectomy, axillary lymph node clearance and radiotherapy. She had a hysterectomy and both anterior and posterior repairs performed in 2014. She was reported to have a solid lesion arising from the anterior aspect of her right kidney when she had ultrasound scanning on 10 December 2015 in the investigation of epigastric pain and nausea. On Renal CT scanning on 21 December 2015, the lesion was reported to be 2.7 cms in diameter. It was then appreciated that the lesion had been present on CT scanning in February 2012 when it measured 1.2 cms in diameter. CT scanning also reported the presence of a new nodule, 0.3 cms in diameter, in the lower lobe of the left lung. Patient remained well at review on 29 December 2015 when it was agreed to request a Renal MRI scan prior to MDM discussion of possible biopsy of the lesion. CT Chest, 21.12.15 - 1. Enhancing right renal mass, in keeping with a renal cell carcinoma. Urology referral required. 2. New tiny left lower lobe pulmonary nodule. CT follow-up in 1 year advised. MRI renal, 11.01.16 - 2.4cm enhancing right renal tumour which has increased in size from February 2012 (1.3 cm) and probably represents a small renal cell carcinoma. Discussed at Urology MDM 21.01.16. MRI scanning has indicated that the right renal lesion is probably a renal cell carcinoma. For review by Mr O'Brien to discuss partial nephrectomy. This lady was admitted on 4th March 2016 and underwent a laparoscopic partial nephrectomy. For pathology review at MDM prior to subsequent outpatient follow up with Mr Haynes Laparoscopic partial nephrectomy, 04.03.16 - await pathology.

Subject: Urology Waiting Lists

Importance: High

Dear Esther

I write to express serious patient safety concerns of the urology department regarding the current status of our Inpatient theatre waiting lists and the significant risk that is posed to these patients.

As you are aware over the past 6 months inpatient elective activity has been downturned by 30% as part of the winter planning. This has meant that for our speciality demand has outstripped our capacity for all categories of surgery. In reality this has meant that Red Flag cases have been accommodated, with growing times from referral to treatment and increasing numbers of escalations / breaches. However, only limited numbers of clinically urgent non cancer cases have been undertaken with waiting times for these patients increasing significantly. These clinically urgent cases have also been subject to cancellation on occasion due to bed pressures. Routine surgery has effectively ceased. As you are aware there are staffing difficulties in theatres which renders it likely that there will be ongoing reduction in elective capacity. This is likely to disproportionate impact on Urology as we have, as a speciality, three 4 hour theatre sessions which take place as part of extended days and it is these sessions that will not be running.

The clinically urgent cases are at a significant risk as a result of this. Included in this group are patients with urinary stone disease and indwelling urethral catheters. The progressive waiting times for these patients are putting them at risk of serious sepsis both while waiting for surgery and at the time of their eventual surgery. In addition for the stone disease patients, their surgery can be rendered more complicated by development of further stones and / or encrustation of ureteric stents. The clinically urgent category also includes patients who are at risk of loss of kidney function as a result of their underlying urological condition (eg benign PUJ obstruction). Many of these patients are recurrently attending A&E and having unscheduled inpatient admissions with urinary sepsis while awaiting their inpatient surgery. Catheter related sepsis is a significant risk and all catheterised patients on our waiting lists are at risk of this, the recognised mortality risk for Catheter associated sepsis is 10%. Patients with stone disease and other benign urological conditions which affect upper urinary tract normal functioning are at risk of losing kidney function and consequently renal failure. The current duration of our waiting lists means significant numbers of patients are at risk of loss of renal function and consequently these patients are at a risk of requiring future renal replacement therapy. Duration of ureteric stenting in stone patients is associated with progressively increasing risk of urosepsis, and it's associated risk of death, as a post-operative complication. This risk has been quantified as 1% after 1 month, 4.9% after 2 months, 5.5% after 3 months and 9.2% after greater than 3 months. Currently our waiting lists have significant numbers of patient who have had stents in for in excess of 3 months and therefore our risk of post-operative sepsis is significant and is continuing to grow.

Tragically, a 70 year old male patient died this weekend following an elective ureteroscopy. He had a stent inserted in early March as part of his management of ureteric stones and was planned for an urgent repeat ureteroscopy. This took place 10 weeks after initial stent placement. He subsequently developed sepsis and died on ICU 2 days after the procedure. While this may have happened if his surgery took place within 1 month of insertion of the stent, and there will be other factors involved (co-morbidities etc), his risk of urosepsis was increased 5 fold by his waiting time for the procedure.

Unless immediate action is taken by the trust to improve the waiting times for urological surgery we are concerned that another potentially avoidable death may occur.

The private sector does not have a role to play in the management of this problem (previous experience) and the trust needs to therefore find a solution from within. We are aware that while our waiting times are far longer than is clinically appropriate or safe, other specialities have far shorter waiting times with waits for routine surgery being far shorter that our clinically urgent waiting times. Given the risk attached to these patients and the disproportionately short waiting times in other specialities one immediate solution is to have specialities with shorter waiting times 'give up' theatre lists to be used by the urology team until such a point as these waiting times come back to a reasonable length (less than 1 month for all clinically urgent cases).

Looking at our current waiting list there are currently approximately 550 patients in the clinically urgent category, waiting up to 208 weeks at present. In order to treat these patients we would require a minimum of 200 half day theatre lists. We would suggest the target should be 4 additional lists per week in order to treat this substantial volume of patients and this would therefore need to run for at least a year in order to bring the backlog down to an acceptable level (waiting time less than 1 month). It may require a longer period / more sessions as patients continue to be added to the waiting lists and demand outstrips our normal capacity. This requirement is on top of our full complement of weekly inpatient theatre sessions (11). With regards staffing of these lists we currently have 2 locum consultants providing sessions in the department and these individuals could be used in order to deliver the surgery or back fill other activity so the 5 permanent consultants can undertake the additional lists. In addition the department need a longer term increase in available inpatient operating in order to match demand. Clearly the above would not tackle the routine waiting list.

Once again, we would stress that without immediate action to start treating these patients there will be a further adverse patient outcome / death from sepsis which would potentially not have occurred if surgery had happened within acceptable timescale.

I am happy to meet to discuss timescales to implement the changes required.

Yours Sincerely

Mark Haynes

Mark
This is a good suggestion. It should be noted that there are some patients on our waiting lists who we are unaware of their admission to another hospital or specialty in CAH.

Subject: Emergency admissions of patients on waiting lists
Importance: High

Morning all

As we are all aware, waiting times for our patients are considerable. For some patients this results in them being admitted as emergencies, with in particular urosepsis, and these admissions would likely have been avoided if the patient had received timely elective surgery.

Amongst the key trusts targets set by the DoH is a reduction in healthcare associated gram negative bloodstream infections.

Going forwards, can we each submit an IR1 form for any patient who has waited longer than a time we consider 'reasonable' for elective treatment and is subsequently admitted as emergencies, in particular those with positive gram negative blood cultures, but including any patient whose emergency admission would have been avoided if they had received timely elective surgery? This will clearly document to the trust and HSC the patient risk and harm.

What constitutes 'reasonable' is up for debate and has to be left to each of our clinical judgement. As an initial thought I suggest;

>1 month delay for planned change of long term stent or beyond planned timescale for ureteroscopy for stone in stented patient.
>3 month wait for treatment for catheterised man awaiting TURP/incomplete bladder emptying awaiting TURP, stone disease for ureteroscopy, PCNL or nephrectomy (in non-functioning kidney), pyeloplasty.
>1 year wait for routine elective treatment

As onerous as it may be completing these forms, the documentation will heighten the recognition of our patients needs and suffering due to the lack of capacity. It will also protect us to some degree, I am aware that a speciality (not urology) in an NI trust has come in for criticism because it did not flag / document delays in cancer treatments which are felt to have resulted in patients coming to harm.

Hope this is OK with all. The IR1 form link is;

7. DATE OF SEA MEETING / INCIDENT DEBRIEF	**21 August 2018**

8. SUMMARY OF EVENT:

Personal Information redacted by USI attended Craigavon Area Hospital (CAH) Emergency Department (ED) on 4 March 2018. The impression was an infected obstructed left urinary tract. A computerized tomography scan (CT scan) of the urinary tract on 4 March 2018 reported an '*obstructing left sided ureteric renal calculus with proximal ureteric dilatation and associated moderate hydronephrosis. Imaging findings have not changed dramatically since the previous study, thus an acute on chronic deterioration is most likely*'. Personal Information went to emergency theatre for a cystoscopy and insertion of a left ureteric stent. Medical notes report Personal recovered well on the ward. Personal Information was commenced on antibiotics and was discharged home on 8 March 2018 with a plan for follow up in 6 weeks for ureteroscopy and laser (URS). Standard management of infected stones is insertion of temporary stent and treatment of sepsis infection followed by planned definitive stone fragmentation. Personal Information's planned treatment was ureteroscopy and laser fragmentation of stones.

On the 28 March 2018 Personal Information attended CAH ED and was admitted to a medical ward and was treated for acute kidney injury and a urinary tract infection. Personal Information was discharged home on 30 March 2018 with the plan for follow up with urology as previously planned.

On the 18 May 2018 Personal Information was admitted to CAH for a planned left ureteroscopy. The findings noted were an impacted stone in the proximal ureter. The stone was fragmented and 100% was removed. The stone was sent for analysis. Flexible pyeloscopy showed no stone. A 6Fr x 24cm JJ stent was inserted. The plan was for admission overnight and home tomorrow if well.

Personal Information's condition deteriorated post operatively. Personal Information and was transferred to the intensive care unit (ICU). While in ICU Personal Information required escalating inotropic support but despite aggressive intensive care management, Personal Information's condition continued to deteriorate. Following discussion with Personal Information's family a do not actively resuscitate (DNR) was put in place. Personal Information's death was confirmed on Personal Information redacted by USI

Personal Information was discussed with the Coroner and an unsigned death certificate was agreed with the cause of death recorded as:
1a. Multi-organ failure due to myocardial infarction,
b. Sepsis due to

c. left ureteroscopy for renal stone.
II. Ischaemic heart disease.

11. SERVICE USER DETAILS:
Male DOB Personal Information redacted by USI

WHAT HAPPENED

Personal Information was a 70 year old gentleman who was brought in by ambulance to CAH ED on 4 March 2018. Personal Information presented feeling unwell with an acute all over weakness and hot and cold shivers. The clinical impression was an infected obstructed left urinary tract. A CT of urinary tract on 4 March 2018 reported '*obstructing left sided ureteric renal calculus with proximal ureteric dilatation and associated moderate hydronephrosis. Imaging findings have not changed dramatically since the previous study, thus an acute on chronic deterioration is most likely*'. Standard management of infected stones is insertion of temporary stent and treatment of sepsis infection followed by planned definitive stone fragmentation. Personal's planned treatment was ureteroscopy and laser fragmentation of stones.

Personal Information went to emergency theatre for cystoscopy and insertion of a left ureteric stent. Medical notes report urine was positive for leucocytes but no other infective source was noted and Personal recovered well on the ward. Personal was commenced on antibiotics and was discharged home on 8 March 2018 with a plan for follow up in 6 weeks for ureteroscopy and laser (URS).

On the 28 March 2018 Personal Information attended CAH ED and was admitted to a medical ward and was treated for acute kidney injury and an Escherichia coli (E. coli) urinary tract infection treated with antibiotics. Personal was discharged home on 30 March 2018 with the plan for follow up with urology as previously planned.

Personal Information had an outpatient pre-operative assessment appointment on the 07 May 2018, but was unable to attend due to inpatient status. Personal Information was subsequently sent another pre-operative assessment appointment for 22 May 2018, four days post operation procedure.

Personal Information was contacted by hospital staff on the 16 May 2018 for admission on the 18 May 2018 for ureteroscopy and laser (URS). Personal Information was admitted on 18 May 2018 to CAH for planned surgery. The preoperative assessment on the day noted Personal Information's medical history and noted that Personal Information was not "*Fit & Well*". He had a previous history of ischaemic heart disease, non-insulin dependent diabetes mellitus and hypertension. His height, weight and clinical observations were noted.

Personal Information attended theatre and intravenous Gentamicin (antibiotic) was administered prior to the procedure in theatre. The operation a left ureterorenoscopy was performed by Dr 1(Locum Urology Consultant) and Dr 3 (Urology Registrar). The operational findings noted an impacted stone in the proximal ureter. The stone fragmented and 100% was removed. The stone was sent for analysis. A flexible pyeloscopy showed no stone. A 6Fr x 24cm JJ stent was inserted. A specimen of urine was sent for microbiological testing on 18 May 2018 at 12.10 which isolated E. coli (bacteria). The results were reported the following day 19 May 2018.

Persona l Informati on

s condition deteriorated post operatively. At 13:35 his temperature was noted to be 34.8ºC and a warming blanket was applied. At 14:40 his temperature was 38ºC and he was noted to be shivering. He was reviewed by Dr 1(Locum Urology Consultant) and intravenous Tazocin was prescribed. He noted rigor post ureteroscopy and the plan was intravenous fluids and urinary catheter.

The nursing notes reflect Dr 2 (Consultant Anaesthetist) was informed and a right radial arterial line was inserted at 15:00. Intravenous paracetamol was administered at 15:00 as per Dr 4 (Consultant Anaesthetist). Intravenous fluids were erected and blood tests including a full blood picture and an ICU profile, and CRP (blood tests which can indicate if infection is present) were taken. An arterial blood gas was carried out. A 12 lead electrocardiogram (ECG) was completed at 15:30 which showed sinus tachycardia (fast heart rate). A right jugular central line was inserted at 16:30 and a Noradrenaline infusion was commenced at 16:35, the rate was subsequently increased to10ml. Blood glucose was measured as 4.0mmols at 4pm, it dropped to 3.5mmols at 16:22; Dextrose 50% 20ml was prescribed intravenously at 16:35 to manage the low blood sugars. Oxygen was administered at 5 litres per minute.

Observations were charted as:

Table 2

A specimen of urine was sent for microbiological testing on 18 May 2018 at 23:00 and reported no significant growth. Blood cultures taken on the 18 May 2018 showed no growth.

Personal Information was transferred to the intensive care unit (ICU). Personal Information was intubated and ventilated and was treated with antibiotics and high dose inotropes (drugs that help maintain blood pressure), sodium bicarbonate, intravenous fluids and dialysis. He had a troponin rise between the 19 – 20 May 2018 from 400 to 3783ng/L. He proceeded to an echocardiogram which showed an ejection fraction of 15%.

Personal Information failed to improve despite maximal medical management and following discussion with Personal Information's family, the decision was made not to attempt CPR in the event of a cardiac arrest. Personal Information condition deteriorated, and on the Personal Information redacted by USI Personal Information remained seriously ill with severe sepsis and probable myocardial infarction. Personal Information died on the Personal Information redacted by USI 15:57. Personal Information was discussed with the coroner and an unsigned death certificate was agreed with the cause of death recorded as 1a. Multi-organ failure due to myocardial infarction, b. Sepsis due to C. left ureteroscopy for renal stone. II. Ischaemic heart disease.

SECTION 3 - LEARNING SUMMARY

12. WHAT HAS BEEN LEARNED:

Personal Information was discussed with the Coroner and an unsigned death certificate was agreed with the cause of death recorded as 1a. Multi-organ failure due to myocardial infarction, b. Sepsis due to C. left ureteroscopy for renal stone. II. Ischaemic heart disease.

Patient factors

Personal Information had significant comorbidities including ischaemic heart disease, non-insulin dependent diabetes mellitus and hypertension. This may have made him less able to tolerate the effects of infection. Personal Information had a recent E. coli urinary tract infection. E. coli was isolated in a sample of urine obtained on the 18 May 2018.

The general risk factors for urinary tract infections are patients of older age, immune deficiency, malnutrition, obesity, diabetes mellitus, smoking, hypoalbuminemia. The higher the American Society of Anaesthesiologists (ASA) Score (a global score that assesses the physical status of patients before surgery) the greater is the risk of infectious complications [1]. Personal Information's ASA score was 3 indicating a patient with severe systemic disease.

The European Association of Urology guidelines on urological infections suggested that bacteriuria (bacteria in the urine) is a definite risk factor in procedures entering the urinary tract and breaching the mucosa (endoscopic urological surgery), and thus it should be treated. They suggest that a urine culture must be taken prior to such interventions, and in the case of asymptomatic bacteriuria, pre-operative treatment should be given [2].

It is very important to identify and control risk factors for the development of urinary infection after endo-urological procedures, with main objective to minimise occurrence of infectious complications.

Guidelines, Policies and Procedures

September 2017 Preoperative guidelines state *"All patients who are listed for Invasive / Endoscopic procedures must have an MSU / CSU sample sent to Microbiology for O&S testing within 7 days of their admission. If their admission date is not within 7 days of pre-op then the patients must be given the sample bottle and microbiology request form and instructed to leave an MSU / CSU to their GP for testing within 7 days of their admission date".*

Personal Information was reviewed by an anaesthetist on the morning of surgery and the review team concluded that the assessment was appropriate, highlighting Personal Information's preoperative risks. The review team concluded that while it would have been advantageous to have a formal preoperative assessment prior to admission, Personal Information had no previous issues with anaesthetics and thus from an anaesthetic perspective, this assessment on the day of admission was appropriate and from an anaesthetic perspective it was reasonable to proceed with surgery.

Personal Information's comorbidities and recent urinary tract infection should have prompted the surgeon to request a preoperative assessment including microbiological testing of urine. Microbiological testing of urine was not performed prior to admission to assess if Personal Information's urinary tract infection had resolved. If a preoperative assessment had been performed and E. coli cultured from urine, the procedure would have been postponed and further treatment prescribed before the procedure would have been performed.

While [redacted] had a urine microbiology test taken on the 18 May 2018 the result was not available until the 19 May 2018. Intravenous Gentamicin (antibiotic) was administered at induction in theatre; the review team noted this was appropriate and that the E. coli later reported was sensitive to Gentamicin.

The review team acknowledge [redacted] had a pre operation assessment appointment scheduled for the 07 May 2018 and this was cancelled by [redacted] due to his inpatient status. [redacted] was offered an alternative appointment on 22 May 2018, 4 days after [redacted]'s scheduled ureteroscopy and laser surgery. It has come to the review team's attention that both pre-operative appointments were scheduled as [redacted] was on the waiting list for a general surgery procedure, added to Dr 8's waiting list on 30 January 2018. The pre-operative assessment department were not aware that [redacted] was on the waiting list for a urology procedure under the care of Dr 5 from 9 March 2018. There was no pre-op episode opened on Patient Administration System (PAS) for this waiting list episode.

The review team concluded that [redacted] should have had proactive preoperative assessment to include microbiological testing of urine.

The majority of surgical procedures are able to be managed as day cases but in a minority of cases the decision is made at the time of procedure for the patient to remain as an inpatient. In [redacted]'s case the decision would have been made at the time of surgery. It is recognised that while the majority of ureteroscopies performed to treat stones may be performed as day case procedures, many patients will need to be treated as an inpatient due to a combination of co-morbidities and procedure related factors.

The review team acknowledge [redacted]'s condition deteriorated post operatively and he required intensive care treatment. The management of sepsis is led by the critical care team as per SHSCT procedure and as [redacted]'s condition continued to deteriorate post operatively, the critical care team took over his management and care. Dr 1 (consultant urologist) noted rigor post ureteroscopy and intravenous Tazocin was prescribed, intravenous fluids were given and a catheter was inserted. [redacted]'s condition continued to further deteriorate and [redacted] was appropriately referred and reviewed by the critical care team (Dr 2 consultant anaesthetist), and transferred to the intensive care unit (ICU) for ongoing management and care by the critical care team. The review team conclude treatment and care provided in the recovery ward was appropriate and staff acknowledged [redacted]'s deteriorating symptoms and acted appropriately by contacting the critical care team (Dr 2) who then took over [redacted]'s management and care.

Waiting list, demand and capacity.

The review team noted that there are demand and capacity issues within the urology service, with 1261 patients on the inpatient and day case waiting list, and with 785 patients waiting over 52 weeks on 7 December 2018. Planned patients for change of stent are recorded in different ways and held on 6 waiting lists. [redacted] was added to the waiting list on 9 March 2018, he waited 10 weeks prior to his procedure.

The review team note that patients who undergo ureteroscopy after ureteric stent insertion have a higher risk of postoperative sepsis. Prolonged stent dwelling time can cause sepsis as an indication for stent insertion, and female gender are independent risk factors. Stent placement should be considered cautiously, and if inserted, ureteroscopy should be performed at the earliest opportunity, appropriate for an individual's circumstance, with risks of post-operative sepsis recognised to be higher where stents have been insitu for longer than 1

month[3].

Medical record and documentation.

The review team noted there was no evidence of handover from the recovery ward to ICU recorded in [redacted]s recovery ward medical documentation. Once accepted by ICU all documentation was transferred to ICCA system in recovery therefore all documentation of care continued on this system, however this should have been indicated clearly within the patient theatre/recovery care pathway record. All other medical documentation in recovery was recorded appropriately

Medical records should be factually accurate and the review team acknowledge there are several inaccurate entries made by medical staff after [redacted]'s death. The letter to [redacted]s GP was dated [redacted], the day before [redacted]s death. The performa 'checklist after the death of a patient' was also incorrectly completed recording the cause of death as Pancreatitis, Breast Cancer and Ischemic Heart Disease. [redacted]'s medical certificate of cause of death stated [redacted] was last seen alive and treated by Dr 7 on the [redacted] the day after [redacted]s death. The review team have acknowledged these errors and determine the medical staff involved in [redacted]s care will be provided with a copy of the report for reflection and learning. On behalf of the Trust the review team would like to apologise to [redacted]s wife [redacted] and extended family for the errors documented and for any distress caused.

Visiting Times

It has come to the review team's attention that [redacted]'s family have suffered further grievance due to the fact they were not allowed to see [redacted] when he was so in critically ill in ICU. [redacted]s family report they were only allowed a brief moment with [redacted] on his arrival to ICU and after that [redacted]'s wife [redacted] and daughter had another brief moment prior to intubation. [redacted]s family report they were present in the ICU waiting room throughout but were not allowed to see [redacted] until [redacted] at this stage the family feel it was too late as [redacted] was in his final hours and the family's final moments were taken away. The family have expressed they are deeply saddened by this as they were unable to be with [redacted] during his last few days of life. The family have asked that this rule should be reviewed as it was both cruel and insensitive. The review team have reflected on this and advise the Trust to review its policy and procedure on visiting times for families of ICU patients.

Communication

[redacted]'s family have underlined a number of communication issues to the review team. [redacted]s family report they had difficulty getting through to the recovery ward to get an update on [redacted]'s condition. [redacted]'s family have reported they tried to contact the ward on numerous occasions throughout the day of the 18 May 2019 but failed to get through. [redacted]'s family stressed at no time did staff try to contact them to inform them that [redacted]s condition had deteriorated post procedure and required overnight admission. The family report they finally made contact with the ward at 18:15 and were advised by the nurse to come down and a nurse would speak with them, however upon arrival the nurse refused to do so. The family requested to speak to a doctor but were told by a member of the nursing staff that it was a Friday night and they would not be able to speak to a doctor now.

The review team acknowledge communication with families post procedure is difficult due to a number of barriers. The review team determined that medical staff would have had a full theatre list booked for the day and were probably dealing with other procedures and work

pressures and therefore unable to take time out to update [redacted]s family. The review team have concluded that treatment and care within the recovery ward was appropriate but due to work pressures [redacted]'s family were not updated. The review team again have determined the report will be shared with all staff involved in [redacted]s care for reflection and learning.

13. WHAT HAS BEEN CHANGED or WHAT WILL CHANGE?

Patients undergoing elective and planned procedures where the urinary tract will be entered and the mucosa breeched, including endoscopic urological surgery, must have a preoperative assessment with microbiological testing of urine within 7 days of the planned procedure and any confirmed bacteriuria treated with appropriate antibiotics prior to the planned procedure.

14. RECOMMENDATIONS (please state by whom and timescale)

Recommendation 1
This report will be presented at morbidity and mortality meetings to share learning with clinical staff.

Recommendation 2
All patients undergoing elective and planned procedures where the urinary tract will be entered and the mucosa breeched, including endoscopic urological surgery, must have a preoperative assessment with microbiological testing of urine within 7 days of the planned procedure and any confirmed bacteriuria treated with appropriate antibiotics prior to the planned procedure.

Recommendation 3
Urology waiting lists should be standardised, to include standardised description of ureteric stent change/removal procedures.

Recommendation 4
Consultant Urologists should ensure that they have a system in place which ensures that patients with ureteric stents inserted are recorded with planned removal or exchange dates in order to ensure patients do not have ureteric stents in place for longer than intended.

Recommendation 5
All patients who have ureteric stents inserted for management of urinary tract stones should have plans for definitive management within 1 month unless there are clinical indications for a longer interval to definitive treatment.

Recommendation 6
Where patients wait longer than the intended time for definitive management with a ureteric stent in situ the case should be reported on the trust DATIX system.

Recommendation 7
The Trust should review waiting times and put systems and processes in place to minimise waiting times across specialties and continue escalation to the Health and Social Care

Board as required.

Subject: RE: Urology Waiting Lists

Dear Esther

Following on from below, a meeting took place. However, that meeting was to resolve the issues of the impact of the loss of extended day operating on the urology team such that the impact of this was spread across the surgical teams. The meeting did not result in Urology having its full number of weekly theatres (11 with backfill), nor was it intended to address any increase in urology operating to address the waiting list backlog.

In preparation for the meeting, waiting time information across different specialities were collated as below (as at 25/5/18);

Specialty	Urgent Inpatients	Weeks Waiting	Routine Inpatients	Weeks waiting	Urgent Daycases	Weeks waiting	Routine Daycases	Weeks waitin
Urology	596	208	237	225	378	173	541	212
ENT	29	1x38 19	142	64	64	23	923	80
General Surgery	113	147	75	139	437	131	901	121
Breast	16	1 x 41 27	15	82	10	1 x 19 4	9	38
Orthopaedics	200	1 x 160 85	1155	171	130	1 x 101 80	805	128
Gynae	28	11	168	50	26	1 x 26 6	106	44

As such, consideration needs to be given as to how the clinical risk associated with such significant waiting time disparities across specialities should be managed. As highlighted in my previous e-mail, amongst the urology cases are patients where there is well documented increased risk associated with longer waiting times. Unfortunately given the current constraints of available theatre time and inpatient beds along with nursing staffing pressures, [illegible] solution that doesn't impact on the waiting times of patients from other specialities. However, I do not believe we can justify accepting the current situation.

Could we look to meet at some point next week to discuss this, perhaps we could use our 1:1 meeting next Tuesday with Ronan, Martina and Barry joining us?

From a urology team perspective, I think it would also be helpful to meet the full consultant team. We are all available on Thursday 14th June at 12:30 and would be happy to meet then if that suits?

Thanks

Mark

MR O'BRIEN: I would ideally like to. I think what you should do --

COLIN WEIR: The process will be that you will have to agree it.

MR O'BRIEN: Of course. I should have said to you, did I say it in the email, you remember when previously I think when I was trying to reduce the number of new clinics I would do and so forth, you were saying you would need to consult with your colleagues and so forth. I have done all of that.

COLIN WEIR: That's fine.

MR O'BRIEN: They would not only be entirely in agreement but we could very well see a movement to join me.

COLIN WEIR: Okay.

MR O'BRIEN: I think it is a pretty overworked speciality.

COLIN WEIR: Yeah, yeah

MR O'BRIEN: And the other big issue that needs to have a response from the trust, which is appalling at present, is having 597 patients awaiting urgent in-patient admission.

COLIN WEIR: Yes.

MR O'BRIEN: With A waiting time of 210 weeks and gynaecology have 28 patients waiting 11 weeks.

COLIN WEIR: All right.

MR O'BRIEN: How does have an organisation stand over that?

COLIN WEIR: Well, (inaudible).

MR O'BRIEN: Thank you for accommodating me.

COLIN WEIR: No problem.

Martina,

I write to you regarding this 69 year old, diabetic man who had a stone obstructing his upper right ureter in 2015.
He was managed by ureteroscopic laser lithotripsy.
He was noted to have a grossly enlarged prostate gland on endoscopic assessment.
I advised him that he would be better served by having his prostate resected.
He was placed on the waiting list on 08 October 2015.

On reviewing my waiting list during August, I noted that he had been removed from the waiting list in July 2019.
When I contacted him by telephone, he advised that he had received a letter enquiring whether he wished to remain on the waiting list, or words to that effect.
As his only symptoms was that of nocturia, he replied that he did not wish to proceed with surgery.

I requested an ultrasound scan which has since indicated that he may have recurrence of stone in his right kidney, that he has inadequate bladder voiding with a residual volume of 190 mls, and would appear to have formed a stone in his bladder.
I have again spoken to the patient by telephone, advising him of the above findings.
I have requested a CT Urinary Tract to more clarify his stone status.
He has agreed to being returned to the waiting list for admission for TURP.
I have dictated a letter to the GP requesting that he be prescribed Tamsulosin until admission for TURP, in addition to requesting optimisation of diabetic control prior to admission.

I hope that you will agree that it is appropriate that I bring such a case to your attention.
I believe that it is entirely inappropriate that non-clinical staff should correspond with patient to enquire whether they wish to remain on a waiting list, and entirely for the purpose of reducing the numbers of patients on waiting lists.
Patients have the right to decline proposed management, but should be empowered to make decisions informed by clinical advice.

I would be very reassured if this practice has been discontinued, as you had recently indicated.
I would also be grateful if I could be furnished with a list of those patients of mine who have been so communicated with.

Thank you,

Aidan.

As I have stated before I was not aware of the process until it had started and when I became aware had requested it cease.

Where the process is administrative only (ie checking patient not deceased, and checking they haven't had it done elsewhere), then it is fine. This process went beyond that and asked if patients wanted the operation (no-one wants an operation), and then I believe offered them an opportunity of an OP review to discuss. Not only does this mean informed decisions are not possible by the patient (as no one is re-discussing the pros and cons of surgery) but is also offering something that we cannot deliver ie a timely review appointment. I believe the process also raises false hope in patients that they may get a date for their surgery in the near future.

Martina – do you know who led this work and are they able to provide the urologists with the details of all the patients who have either asked to be removed from the WL, or requested a review OPA?

Hi Martina

I confirm that the inpatient/daycase admin validation for urology has ceased, no letters or phone calls are being made to patients.

My team are working on the outpatient admin validation which includes urology. If no response from 2 x admin validation letters then they will discharged back to the care of the GP. This is the same process for non-responders to outpatient partial booking letters. A letter will go their GP advising same.

He was noted to have a grossly enlarged prostate gland on endoscopic assessment.
I advised him that he would be better served by having his prostate resected.
He was placed on the waiting list on 08 October 2015.

On reviewing my waiting list during August, I noted that he had been removed from the waiting list in July 2019.
When I contacted him by telephone, he advised that he had received a letter enquiring whether he wished to remain on the waiting list, or words to that effect.
As his only symptoms was that of nocturia, he replied that he did not wish to proceed with surgery.

I requested an ultrasound scan which has since indicated that he may have recurrence of stone in his right kidney, that he has inadequate bladder voiding with a residual volume of 190 mls, and would appear to have formed a stone in his bladder.
I have again spoken to the patient by telephone, advising him of the above findings.
I have requested a CT Urinary Tract to more clarify his stone status.
He has agreed to being returned to the waiting list for admission for TURP.

I have dictated a letter to the GP requesting that he be prescribed Tamsulosin until admission for TURP, in addition to requesting optimisation of diabetic control prior to admission.

I hope that you will agree that it is appropriate that I bring such a case to your attention.
I believe that it is entirely inappropriate that non-clinical staff should correspond with patient to enquire whether they wish to remain on a waiting list, and entirely for the purpose of reducing the numbers of patients on waiting lists. Patients have the right to decline proposed management, but should be empowered to make decisions informed by clinical advice.

I would be very reassured if this practice has been discontinued, as you had recently indicated.
I would also be grateful if I could be furnished with a list of those patients of mine who have been so communicated with.

Thank you,

Aidan.

Aimee Crilly

Hi Martina

I confirm that the **inpatient/daycase admin validation for urology has ceased**, no letters or phone calls are being made to patients.

My team are working on the outpatient admin validation which includes urology. If no response from 2 x admin validation letters then they will discharged back to the care of the GP. This is the same process for non-responders to outpatient partial booking letters. A letter will go their GP advising same.

Regards

Wendy

Good morning Aidan and Mark

I have copied Wendy into this email as she will be able to advise on your patients that were contacted and will also be able to assure that for Urology validation that this has ceased.

Wendy can you please assist?

Regards

Martina

As I have stated before I was not aware of the process until it had started and when I became aware had requested it cease.

Where the process is administrative only (ie checking patient not deceased, and checking they haven't had it done elsewhere), then it is fine. This process went beyond that and asked if patients wanted the operation (no-one wants an operation), and then I believe offered them an opportunity of an OP review to discuss. Not only does this mean informed decisions are not possible by the patient (as no one is re-discussing the pros and cons of surgery) but is also offering something that we cannot deliver ie a timely review appointment. I believe the process also raises false hope in patients that they may get a date for their surgery in the near future.

Martina – do you know who led this work and are they able to provide the urologists with the details of all the patients who have either asked to be removed from the WL, or requested a review OPA?

Martina,

I write to you regarding this 69 year old, diabetic man who had a stone obstructing his upper right ureter in 2015.
He was managed by ureteroscopic laser lithotripsy.
He was noted to have a grossly enlarged prostate gland on endoscopic assessment.
I advised him that he would be better served by having his prostate resected.
He was placed on the waiting list on 08 October 2015.

On reviewing my waiting list during August, I noted that he had been removed from the waiting list in July 2019.
When I contacted him by telephone, he advised that he had received a letter enquiring whether he wished to remain on the waiting list, or words to that effect.

Thanks Wendy

Also as per Mr Haynes and Mr O'Brien's requests below can you please update?

(Mr Haynes) – It was the admin IS/validation team that started this piece of work – urology IPDC urgents only, no routine patients. There were 48 urology patients that advised they did not want the surgery (attached). Patients details attached.

I would also be grateful if I could be furnished with a list of those patients of mine who have been so communicated with.
(Mr O'Brien) *2nd attachment is a list of every patient of AOB's that received an admin validation letter. There were 17 patients that belong to Mr O'Brien requested to be removed. List attached.*

Comments
DONE PRIVATLEY ALREADY REMOVED
DOES NOT WANT TO WAIT ANY LONGER
I FEELING VERY GOOD
REMOVE AS PER CONS - ALREADY REMOVED
BEING SEEN BY MR HAYNES - HE DONE PROCEDURE IN 2018
I am ok at the moment with taking my medication. If it stays like this im happy enough.
NOT ANY WORSE THAN IT WAS 10 YEARS AGO
NLR
I HAVE BEEN REFERRED TO ALTNAGELVIN HOSPITAL ON 10/08/19 FOR SURGERY.
BY LETTER- 25.7.19
I HAVE HAD NO PROBLEMS FOR THE LAST 18 MONTHS, NO PAIN OR DISCOMFORT, SHOULD I GET PROBLEMS I WILL INFORM MY DOCTOR.

I HAD SURGERY LAST JULY NEED APPOINTMENT TO SEE MR YOUNG JUST TO SEE IF EVERYTHING IS OK
NLR
PT SAYS WAS DONE
I PASSED THE STONE 3 WEEKS AFTER I WAS SEEN

Thanks

The removals from the waiting list all need to come to clinic for review.

I have looked through those from my waiting list and none of the decisions are free of clinical consequence, all carrying at minimum a risk of emergency admission, most a risk of gram negative sepsis, and in the case of one (staghorn renal stone, xanthogranulomatous pyelonephritis), the clinical consequence is a risk of life threatening sepsis / death. This was probably predictable given that these patients were on the urgent waiting list.

Mark

Leanne – the numbers for my patients are;

Thanks Wendy

Also as per Mr Haynes and Mr O'Brien's requests below can you please update?

[redacted] *(Mr Haynes) – It was the admin IS/validation team that started this piece of work – urology IPDC urgents only, no routine patients. There were 48 urology patients that advised they did not want the surgery (attached). Patients details attached.*

I would also be grateful if I could be furnished with a list of those patients of mine who have been so communicated with. ***(Mr O'Brien)*** *2nd attachment is a list of every patient of AOB's that received an admin validation letter. There were 17 patients that belong to Mr O'Brien requested to be removed. List attached.*

Hi Martina

I confirm that the **inpatient/daycase admin validation for urology has ceased**, no letters or phone calls are being made to patients.

My team are working on the outpatient admin validation which includes urology. If no response from 2 x admin validation letters then they will discharged back to the care of the GP. This is the same process for non-responders to outpatient partial booking letters. A letter will go their GP advising same.

Regards

Wendy

Good morning Aidan and Mark

I have copied Wendy into this email as she will be able to advise on your patients that were contacted and will also be able to assure that for Urology validation that this has ceased.

Wendy can you please assist?

As I have stated before I was not aware of the process until it had started and when I became aware had requested it cease.

Where the process is administrative only (ie checking patient not deceased, and checking they haven't had it done elsewhere), then it is fine. This process went beyond that and asked if patients wanted the operation (no-one wants an operation), and then I believe offered them an opportunity of an OP review to discuss. Not only does this mean informed decisions are not possible by the patient (as no one is re-discussing the pros and cons of surgery) but is also offering something that we cannot deliver ie a timely review appointment. I believe the process also raises false hope in patients that they may get a date for their surgery in the near future.

Martina – do you know who led this work and are they able to provide the urologists with the details of all the patients who have either asked to be removed from the WL, or requested a review OPA?

Martina,

I write to you regarding this 69 year old, diabetic man who had a stone obstructing his upper right ureter in 2015.
He was managed by ureteroscopic laser lithotripsy.
He was noted to have a grossly enlarged prostate gland on endoscopic assessment.
I advised him that he would be better served by having his prostate resected.
He was placed on the waiting list on 08 October 2015.

On reviewing my waiting list during August, I noted that he had been removed from the waiting list in July 2019.
When I contacted him by telephone, he advised that he had received a letter enquiring whether he wished to remain on the waiting list, or words to that effect.
As his only symptoms was that of nocturia, he replied that he did not wish to proceed with surgery.

I requested an ultrasound scan which has since indicated that he may have recurrence of stone in his right kidney, that he has inadequate bladder voiding with a residual volume of 190 mls, and would appear to have formed a stone in his bladder.
I have again spoken to the patient by telephone, advising him of the above findings.
I have requested a CT Urinary Tract to more clarify his stone status.
He has agreed to being returned to the waiting list for admission for TURP.
I have dictated a letter to the GP requesting that he be prescribed Tamsulosin until admission for TURP, in addition to requesting optimisation of diabetic control prior to admission.

I hope that you will agree that it is appropriate that I bring such a case to your attention.
I believe that it is entirely inappropriate that non-clinical staff should correspond with patient to enquire whether they wish to remain on a waiting list, and entirely for the purpose of reducing the numbers of patients on waiting lists.
Patients have the right to decline proposed management, but should be empowered to make decisions informed by clinical advice.

I would be very reassured if this practice has been discontinued, as you had recently indicated.
I would also be grateful if I could be furnished with a list of those patients of mine who have been so communicated with.

Thank you,

Aidan.

Mark,

I have experienced all of this many times before during these past 27 years.
The bizarre aspect of outpatient revalidation is that a letter is sent twice to the patient.
If a response is not received, a letter is then sent only to the GP advising that their patient has been discharged back to their care.
Now I know this to be a fact that the GP is of the belief that their patient has been discharged with their consent, while the patient may be oblivious to that being so!
You couldn't write the script!

My team are working on the outpatient admin validation which includes urology. If no response from 2 x admin validation letters then they will discharged back to the care of the GP. This is the same process for non-responders to outpatient partial booking letters. A letter will go their GP advising same.

Regards

Wendy

Subject: RE: [redacted] CAHE [redacted]

Wendy,

I do appreciate you providing this information.
In essence, the most important word in these documents is the discharge criterion of the procedure / review / appointment not being 'required'.
The examples provided prove again, as proven before, that the patient does not know whether the procedure / review / appointment is advisable or 'required'.
Administratively driven validation exercises are unsafe.
I note that the documents do include a provision for review of the process in September 2019.
I believe that it would be prudent to advise David Mc Cormack of our concerns.
Lastly, not all of the exercise is unsafe or inappropriate.
If the patient is deceased, has changed address, has had the said procedure performed elsewhere etc, such information would be worth pursuing.
I just think that the criterion '....is not required' should be excluded,

Enough said!

Aidan.

Please see original communication from the Board to the AD's and HOS on the 16 July. I am unsure if there was communication with the primary care AMD.

We are concentrating on OPD admin validation and have nearly completed sending letters to all urgent and routine patients who are waiting over 52 weeks. If they decide they do not want their appointment then a letter is sent to their GP to advise same.

I will discuss your concerns with Louise who is the Trust led and the link with HSCB.

As I have stated before I was not aware of the process until it had started and when I became aware had requested it cease.

Where the process is administrative only (ie checking patient not deceased, and checking they haven't had it done elsewhere), then it is fine. This process went beyond that and asked if patients wanted the operation (no-one wants an operation), and then I believe offered them an opportunity of an OP review to discuss. Not only does this mean informed decisions are not possible by the patient (as no one is re-discussing the pros and cons of surgery) but is also offering something that we cannot deliver ie a timely review appointment. I believe the process also raises false hope in patients that they may get a date for their surgery in the near future.

Martina – do you know who led this work and are they able to provide the urologists with the details of all the patients who have either asked to be removed from the WL, or requested a review OPA?

Martina,

I write to you regarding this 69 year old, diabetic man who had a stone obstructing his upper right ureter in 2015.
He was managed by ureteroscopic laser lithotripsy.
He was noted to have a grossly enlarged prostate gland on endoscopic assessment.
I advised him that he would be better served by having his prostate resected.
He was placed on the waiting list on 08 October 2015.

On reviewing my waiting list during August, I noted that he had been removed from the waiting list in July 2019.

When I contacted him by telephone, he advised that he had received a letter enquiring whether he wished to remain on the waiting list, or words to that effect.
As his only symptoms was that of nocturia, he replied that he did not wish to proceed with surgery.

I requested an ultrasound scan which has since indicated that he may have recurrence of stone in his right kidney, that he has inadequate bladder voiding with a residual volume of 190 mls, and would appear to have formed a stone in his bladder.
I have again spoken to the patient by telephone, advising him of the above findings.
I have requested a CT Urinary Tract to more clarify his stone status.
He has agreed to being returned to the waiting list for admission for TURP.
I have dictated a letter to the GP requesting that he be prescribed Tamsulosin until admission for TURP, in addition to requesting optimisation of diabetic control prior to admission.

I hope that you will agree that it is appropriate that I bring such a case to your attention.
I believe that it is entirely inappropriate that non-clinical staff should correspond with patient to enquire whether they wish to remain on a waiting list, and entirely for the purpose of reducing the numbers of patients on waiting lists.
Patients have the right to decline proposed management, but should be empowered to make decisions informed by clinical advice.

I would be very reassured if this practice has been discontinued, as you had recently indicated.
I would also be grateful if I could be furnished with a list of those patients of mine who have been so communicated with.

Thank you,

Aidan.

In 2 weeks time I am in a quarterly liaison meeting between primary care and the trust. I can guarantee that at that meeting I will have major concerns raised to me and demands to know why I organised this – with the medical director looking to me to provide the answers. Pisses me off, but at least on this occasion I know beforehand (I didn't at the last one where a different speciality 'validation exercise' was raised).

Mark,

I have experienced all of this many times before during these past 27 years.
The bizarre aspect of outpatient revalidation is that a letter is sent twice to the patient.
If a response is not received, a letter is then sent only to the GP advising that their patient has been discharged back to their care.
Now I know this to be a fact that the GP is of the belief that their patient has been discharged with their consent, while the patient may be oblivious to that being so!
You couldn't write the script!

Thanks

The removals from the waiting list all need to come to clinic for review.

I have looked through those from my waiting list and none of the decisions are free of clinical consequence, all carrying at minimum a risk of emergency admission, most a risk of gram negative sepsis, and in the case of one (staghorn renal stone, xanthogranulomatous pyelonephritis), the clinical consequence is a risk of life threatening sepsis / death. This was probably predictable given that these patients were on the urgent waiting list.

Attachments: RE: [redacted] (1.88 MB); RE: [redacted] (86.8 KB)

Good morning

Please see email trail below and attached emails.

Aidan had raised the issue of a patient of his who he had noticed he had been removed from the waiting list, on contacting the patient he was advised that he had received a letter asking him if he still wanted his surgery and he had said no.....

As a result of this Aidan had emailed me and Mark and you will see the email conversations below between Aidan, Mark and Wendy who had been instructed by HSCB to do this exercise.

This had been discussed originally with me as being an admin validation (i.e. determine if they are not deceased, living at the same address, check that they have not had their procedure done elsewhere etc..) however on discovering (through increased MLA and patient enquiries) that this was a letter being sent to patients to ask if they still wanted their surgery I immediately put a stop to Urology and ENT (I believe other specialties are continuing).

However as you will see from Mark and Aidan's emails there has already been fall out from this.

I have attached Wendy's email detailing the information of patients that received the letters and we have agreed that these patients would be reinstated onto the waiting lists and Mark has asked that his patients are seen at clinic as well, I will be guided by what the rest of you want to do (i.e. happier to be reinstated and contacted and/or seen again at clinic?)

He was placed on the waiting list on 08 October 2015.

On reviewing my waiting list during August, I noted that he had been removed from the waiting list in July 2019.
When I contacted him by telephone, he advised that he had received a letter enquiring whether he wished to remain on the waiting list, or words to that effect.
As his only symptoms was that of nocturia, he replied that he did not wish to proceed with surgery.

I requested an ultrasound scan which has since indicated that he may have recurrence of stone in his right kidney, that he has inadequate bladder voiding with a residual volume of 190 mls, and would appear to have formed a stone in his bladder.
I have again spoken to the patient by telephone, advising him of the above findings.
I have requested a CT Urinary Tract to more clarify his stone status.
He has agreed to being returned to the waiting list for admission for TURP.
I have dictated a letter to the GP requesting that he be prescribed Tamsulosin until admission for TURP, in addition to requesting optimisation of diabetic control prior to admission.

I hope that you will agree that it is appropriate that I bring such a case to your attention.
I believe that it is entirely inappropriate that non-clinical staff should correspond with patient to enquire whether they wish to remain on a waiting list, and entirely for the purpose of reducing the numbers of patients on waiting lists.
Patients have the right to decline proposed management, but should be empowered to make decisions informed by clinical advice.

I would be very reassured if this practice has been discontinued, as you had recently indicated.
I would also be grateful if I could be furnished with a list of those patients of mine who have been so communicated with.

Thank you,

Aidan.

Summary of Breach Reports – Dec 2017

Modality	Internal/External	Reason
Urology	Internal (DM)	• Treatment completed on D68 - Anti-cancer drug/Chemotherapy. **Delays in Pathway - 19 day delay for 1st OPD, 16 day delay for MRI, 12 day delay for TRUSB, 9 day delay for MDM, 12 day delay for Consultant review, 12 day delay for treatment.** Pathway - US D0, 1st OPD D19, MRI D35, TRUSB D47, MDM D56, Consultant Review D68, Treatment D68.
Urology	Internal (BO)	• **Treatment completed on D81 - Active Monitoring. Delays in Pathway - 27 day delay for 1st OPD, 14 day delay for MRI, 8 day delay for MRI to be reported on, 20 day delay for Consultant review.** Pathway - 1st OPD D27, MRI D41, TRUSB D53, MDM D61, Consultant review D81, Treatment D81.
Urology	Internal (COM)	• **Treatment completed on D74 - Anti-cancer drug/Chemotherapy. Delays in Pathway - 24 day delay for 1st OPD, 16 day delay for MRI, 8 day delay for MRI to be reported on, 14 day delay for TRUSB.** Pathway - 1st OPD D24, MRI D40, Consultant review D58, TRUSB D62, MDM D68, Consultant review D73, Treatment D74
Urology	Internal (BD)	• **Treatment completed Day 111 - Active Monitoring. Reason for delay - 1st OPD D34, 25 day delay for TRUSB & then 36 day delay for review with Consultant.** Pathway - 1st OPD D34, MRI D40, TRUSB D65, and pathology reported D74, MDM D75, review Day 111 - Active Monitoring.

		delay for TRUSB, 21 day wait for review with Consultant, followed by 14 day wait for review to commence hormones. Pathway - 1st OPD D29, MRI D39, TRUSB D56, path reported Day 59, MDM D65, review Day 86, Bone scan Day 101, MDM D108, review Day 121
Urology	Internal (HQ)	• **Treatment completed - D73 - Hormones. Reason for delay - 1st OPD D22, 11 day wait for MRI to be reported and 6 day wait for review with Consultant.** Pathway - 1st OPD D22, MRI D27, MRI reported D38, TRUSB D58, path reported Day 65, MDM D67, review Day 73.
URO	External (JM)	• **Treatment completed on D173 - Brachytherapy. ITT on D63. Delays in Pathway - 21 day delay for 1st OPD, 14 day delay on MDM as pathology not available, 11 day delay for Consultant review, 31 day delay from ITT to Consultant appointment due to availability, 71 day delay for Brachytherapy due to patient medication and availability.** Pathway - 1st OPD D21, MRI D28, Consultant review D37, TRUSB D37, MDM DS1, Consultant review D62, ITT D63, Oncology appointment D100, Oncology review D101, Cardiology appointment D101, Treatment D173.

Risk Areas for February/March 2018

Internal

- Late updating of routine/urgent outpatient referrals within 48 hours
- Capacity for 1st RF appointment for Urology,
- Reporting of diagnostics (CT 's & MRI scanning)
- Urology Pathway
- Radiology/Pathology cover @ MDM's due to annual leave and a deputy not being able to attend. The cases are still being listed for discussion with reports. Cases only being deferred and escalated if they are unable to be discussed.
- Urology – TURBT's from 01.01.18 are to be treated as a diagnostic procedure and not first definitive treatment. This will have an impact on 62D performance. There has been no regional agreement regarding this – to be discussed at Cancer Operational Meeting on 31.01.18.

External

- Brachytherapy
- Robotic Prostatectomy

Modality	Internal/External	Reason
Urology	Internal (DM)	• **Treatment completed on D68 - Anti-cancer drug/Chemotherapy. Delays in Pathway - 19 day delay for 1st OPD, 16 day delay for MRI, 12 day delay for TRUSB, 9 day delay for MDM, 12 day delay for Consultant review, 12 day delay for treatment.** Pathway - US D0, 1st OPD D19, MRI D35, TRUSB D47, MDM D56, Consultant Review D68, Treatment D68.
Lower GI	Internal (DL)	• **Treatment completed on D98 - Surgery. Delays in Pathway - 22 day delay for 1st OPD, 9 day delay for OGD, 27 day delay for CTC, 16 day delay for Colonoscopy, 19 day delay for CT (although CT never requested from MDM on 26/10/17), 12 day delay for treatment.** Pathway - 1st OPD D22, OGD D31, CTC D49, MDM D58, Colonoscopy D74, MD D79, Consultant review D86, Treatment D98, MDM D107.
Breast	Internal (LMH)	• **Treatment completed on D72 - Surgery. Delays in Pathway - 31 day delay for 1st OPD.** Pathway - 1st OPD D31, USS BX D31, Mammogram D31, MDM D36, Consultant review D37, MDM D39, and Treatment D72.
Urology	Internal (BO)	• **Treatment completed on D81 - Active Monitoring. Delays in Pathway - 27 day delay for 1st OPD, 14 day delay for MRI, 8 day delay for MRI to be reported on, 20 day delay for Consultant review.** Pathway - 1st OPD D27, MRI D41, TRUSB D53, MDM D61, Consultant review D81, Treatment D81.
Breast	Internal (IC)	• **Treatment completed on D86 - Surgery. Delays in Pathway - 31 day delay for 1st OPD, 17 day delay for MRI, 8 day delay for MDM as MRI not reported, 19 day delay for Treatment**. Pathway - 1st OPD D31, USS BX D31, Mammogram D31, MDM D36, Consultant review D37, MRI D48, MDM D52 deferred, USS BX D60, Mammogram D60, MDM D60, MDM D67, Treatment D86
Breast	Internal (CR)	• **Treatment completed on D78 - Surgery. Delays in Pathway - 38 day delay for 1st OPD, 13 day delay for MRI, MDM deferred for 1 week D56, and 12 day delay for treatment.** Pathway - 1st OPD D38, USS BX D38, MDM D43, CT D48, MRI D51, MDM D56 deferred, Bone scan D58, MDM D64, FNA D64, MDM D66, Treatment D78.
Breast	Internal (LMT)	• **Treatment completed on D76 - Anti-cancer Drug/Chemotherapy. Delays in Pathway - 36 day delay for 1st OPD, 19 day delay for MRI, 14 Day delay for treatment.** Pathway - 1st OPD D36, Mammogram D36, USS BX D36, MDM D41, MDM D48, ITT D49, MRI D60 Oncology appointment D61, MDM D62, DTT D69, Treatment D76.
Urology	Internal (COM)	• **Treatment completed on D74 - Anti-cancer drug/Chemotherapy. Delays in Pathway - 24 day delay for 1st OPD, 16 day delay for MRI, 8 day delay for MRI to be reported on, 14 day delay for TRUSB**. Pathway - 1st OPD D24, MRI D40, Consultant review D58, TRUSB D62, MDM D68, Consultant review D73, Treatment D74

Urology	Internal (BD)	• **Treatment completed Day 111 - Active Monitoring. Reason for delay - 1st OPD D34, 25 day delay for TRUSB & then 36 day delay for review with Consultant**. Pathway - 1st OPD D34, MRI D40, TRUSB D65, and pathology reported D74, MDM D75, review Day 111 - Active Monitoring**.**
Urology	Internal (CMcC)	• **Treatment completed Day 121 - Hormone Therapy. Reason for delay - 1st OPD D29, 17 day delay for TRUSB, 21 day wait for review with Consultant, followed by 14 day wait for review to commence hormones.** Pathway - 1st OPD D29, MRI D39, TRUSB D56, path reported Day 59, MDM D65, review Day 86, Bone scan Day 101, MDM D108, review Day 121
Urology	Internal (HQ)	• **Treatment completed - D73 - Hormones. Reason for delay - 1st OPD D22, 11 day wait for MRI to be reported and 6 day wait for review with Consultant.** Pathway - 1st OPD D22, MRI D27, MRI reported D38, TRUSB D58, path reported Day 65, MDM D67, review Day 73.
LGI	External (GH)	• **Treatment completed on D90 - Chemoradiotherapy. ITT on D49. Delays in Pathway - 18 day delay for 1st OPD, 13 day delay for Colonoscopy, 10 day delay for MRI, 11 day delay for CT, 18 day delay for Oncology appointment as 1st OPD was cancelled, and 23 day delay for Treatment as patient had to attend BWS for chemo assessment.** Pathway - 1st OPD D18, Colonoscopy D31, MRI D41, CT D42, MDM D42, ITT D49, PET D60, MDM D63, Oncology appointment D67, Treatment D90.
URO	External (JM)	• **Treatment completed on D173 - Brachytherapy. ITT on D63. Delays in Pathway - 21 day delay for 1st OPD, 14 day delay on MDM as pathology not available, 11 day delay for Consultant review, 31 day delay from ITT to Consultant appointment due to availability, 71 day delay for Brachytherapy due to patient medication and availability.** Pathway - 1st OPD D21, MRI D28, Consultant review D37, TRUSB D37, MDM D51, Consultant review D62, ITT D63, Oncology appointment D100, Oncology review D101, Cardiology appointment D101, Treatment D173.
Skin	External (POH)	• **Treatment completed on D85 - Surgery. ITT on D31. Delays in Pathway - 12 day delay for Consultant review, 34 day delay for Plastics 1st OPD, 20 day delay for Treatment.** Pathway - 1st OPD D8, Shave Biopsy D8, MDM D16, and Consultant review D28, ITT D31, Plastics appointment D65, Treatment D85**.**

Breast Surgeons have agreed to come down from SET to help reduce current waiting times. Ms Mathers is due to return to SHSCT in February 2018.

Internal

- Breast screening and assessment, routine symptomatic breast service
- Breast deferrals at MDM due to a change in Radiologist's schedule so MRI's are unable to be viewed prior to MDM, so most will be waiting 7-9 days before being discussed at MDM with staging results.
- Late updating of routine/urgent outpatient referrals within 48 hours
- Outpatient Hysteroscopies – Then having to proceed to inpatient Hysteroscopy – lengthening pathway
- Capacity for 1st RF appointment for Urology, Lung, General Surgery & Ultrasound Guided Biopsy procedures
- Barium Swallow/Meal
- Reporting of diagnostics (CT 's & MRI scanning)
- Capacity issues with CT Colonography's – There has been a request for 4 additional slots per weeks.
- Urology Pathway
- Radiology/Pathology cover @ MDM's due to annual leave and a deputy not being able to attend. The cases are still being listed for discussion with reports. Cases only being deferred and escalated if they are unable to be discussed.
- Urology – TURBT's from 01.01.18 are to be treated as a diagnostic procedure and not first definitive treatment. This will have an impact on 62D performance. There has been no regional agreement regarding this – to be discussed at Cancer Operational Meeting on 31.01.18.
- Oncology cover – Lung & GU patients – New Locum working in Trust so this service will continue to be provided locally.

External

- Lung and Upper GI patients are at risk due to PET capacity – PET waiting times is around 3 weeks.
- Brachytherapy
- Plastics – Current waiting time is around 3-4 weeks.
- Thoracic Surgery
- Robotic Prostatectomy

Aidan,

Please see e-mail from Anna below. This patient is on your waiting list for TURP since 13/9/16.

Noleen

From: Doherty, Anna

To: Elliott, Noleen
Subject: Personal Information redacted by USI

Hi Noleen,

This man has come to clinic. He tells me he is on Mr O'Brien's waiting list for TURP. He was pre-assessed in October 2016 but nil since then. Just wondering if he is still on the books? His symptoms are getting quite bad.

Thanks!
Anna

Importance: High

Hi Martina,

Please see below patient who is currently on Day 19 – patient has been triaged to go straight to RF Flexi and Circumcision. Patient has been scheduled for this procedure for 20.03.18 which will be Day 53. Any help securing a sooner date would be very much appreciated as patient is at risk of breaching if a bladder tumour is identified at flexi.

Many thanks,

Vicki Graham

Subject: Urology escalation - Personal Information redacted by USI

Hi,

Please see escalation of patient who is on day 19 of his pathway, is not being seen at OP is proceeding straight to RF flexible cystoscopy and circumcision. He is on Mr Young's WL for this and I had emailed secretary for a date for this and have been advised that he is to be preadmitted for 20.03.18 which would be day 53. I have emailed to ask for something sooner, and response is awaited.

Personal Information redacted by USI

Day	Date	Event
5	30/01/2018	Patients referral triaged for investigation as - change to RF circumcision and flex cysto for haem - still do under dsu and local anaesthetic - needs to come off warfarin. I have emailed Mr Young to see if patient requires investigation only or an additional rf appt.
10	04/02/2018	Patient on RF WL for procedure - date to be defined on MY WL.
15	09/02/2018	Not for RF appointment as patient on for RF circumcision.
15	09/02/2018	Have emailed Paulette to ask when this patient can be seen for his RF Flex and circumcision - he is to proceed straight with investigations.
19	13/02/2018	Paulette advised - I have come across this chap in a message; apparently he?s now to come to a GADAY list. The next one here in CAH is one Laura is doing for MY on 20.03.18 and I can add in there.
19	13/02/2018	Patient is to be preadmitted for 20.03.18 - patient would need procedure sooner if possible will ask Paulette is this the soonest ad escalate this patient to OSL. D53 when procedure would be performed.

Thanks

Shauna

From: Corrigan, Martina Personal Information redacted by USI
Sent: 13 February 2018 11:59
To: O'Brien, Aidan
Subject: Red Flag Triage during Week of 18 January - 24 January

Dear Aidan,

To follow-up on our conversation last Thursday (8 February) regarding timely triage of the red flags during your last oncall week. We have agreed during our discussion that this was a particularly busy week and you advised that you were unable to get to these during the agreed timeframe.

We also discussed that you hadn't escalated that you were finding it difficult to do the red flag triage on a daily basis, nor had you sought help in getting these completed. We have agreed that should this happen again that you will escalate to me and I will arrange for some of the rest of the Team to do these as they are willing to help anytime.

Regards

Martina

Subject: Departmental Meetings

Importance: High

Dear all,

I know we have already talked about getting these weekly meetings up and running again.

Can we aim to have these starting again from 1 March 2018 from 12:30-1:30, Seminar Room 2, MEC?

Items that need to be discussed for the future agendas:

1. Triage (as per Aidan's request) (1 March 2018)
2. Performance (waiting times/lists etc)
3. Stone Treatment Centre (With Laura etc in attendance)
4. Thorndale (with Thorndale staff in attendance)
5. Ward issues (with Sisters in attendance)
6. Backlogs in discharges/admin
7. Mitomycin
8. Paediatric urology in DHH – equipment and rota

There are also times when I am being asked to arrange meetings with you to discuss various issues, e.g. procedural SBA and I would like to use this time for these meetings as it means no clinical activity is cancelled.

Hope that this is ok with everyone.....

Kind regards

Martina

AOB-80494

Modality	Internal/External	Reason
Breast	Internal (Personal Informati	• Treatment completed on Day 82 - Surgery (57 Day wait from DTT) **Reason for delay - Surgery was scheduled on target but was cancelled x 2 - 1st time list was overbooked, then cancelled due to ED pressures.** Pathway - 1st OPD D15, path reported D18, MDM D23, DTT D25, surgery performed on Day 82
Breast	Internal (Person al	• Treatment completed Day 81 - Surgery (54 Days from DTT) **Reason for delay - 54 Day wait from DTT to surgery.** Pathway - 1st OPD D6, MDM D8, MDM D13, MRI D22, MDM D27, DTT - D27, Surgery Day 81.
Breast	Internal (Personal Informatio n	• Treatment completed Day 88- Surgery. **Reason for delay - 1st OPD D33 & 45 day wait for surgery to be performed.** Pathway - 1st OPD D33, MDM D41, DTT D43, MDM D43, Surgery Day 88.
Breast	Internal (Personal Informati	• Treatment completed Day 77- Surgery. **Reason for delay - 1st OPD D30 & then 42 day wait for surgery.** Pathway - 1st OPD D30, path reported D34, MDM D35, DTT D35, surgery D77.
Breast	Internal 31D (Personal Informatio n redacted	• Treatment completed Day 62 - Surgery (31D Breach) - **Reason for delay - 49 day wait for surgery due to no sooner capacity.** Pathway - 1st OPD D11, DTT D13, MDM D13, Surgery D62.
Breast	Internal 31D (Perso nal Inform	• Treatment completed Day 51 – Surgery (31D Breach) **Reason for delay - surgery could not be scheduled within target due to reduced capacity.**
Breast	Internal 31D (Perso nal Inform ation	• Treatment completed Day 47 - Surgery - **Reason for delay - surgery could not be scheduled within target due to reduced capacity.**
Breast	Internal 31D (Personal Informati	• Treatment completed Day 53 - Surgery (31D). **Reason for delay - surgery could not be scheduled within target due to reduced capacity.**
Breast	Internal 31D (Personal Information redacted by the	• Closed on D94 - Treatment complete - Surgery. **Reason for delay - 1st OPD D31, complex case in that HER 2 was awaited, then required Bone scan & CT before proceeding to Surgery - delay with surgery due to capacity issues.** Pathway - 1st OPD 31, MDM D33, MDM D37, Bone Scan D45, CT D60 - Surgery D94.
Breast	Internal 31D (Person al	• Treatment completed Day 83 - Surgery - **Reason for delay - No capacity to perform surgery within target - 64 day wait.** Pathway - 1st OPD D10, MDM D19, DTT D19, Surgery D83.

		within target (51D Wait). Pathway - 1st OPD D14, USS Guided Core BX D17, MDM D[illegible], D28 - Surgery D79.
Breast	Internal 31D [redacted]	• Treatment completed Day 78- Surgery. Reason for delay - no capacity for surgery to be performed on target & patient required x 2 MRI's due to high risk of tissuing. Pathway - 1st OPD D29, MDM D36, DTT D37, MRI D40, MDM D52 - repeat MRI, MRI D54, Surgery D78.
Breast	Internal 31D [redacted]	• Treatment completed Day 37 - Surgery. Reason for delay - surgery could not be scheduled within target due to no capacity.
Breast	Internal 31D [redacted]	• Treatment completed Day 58 - Surgery. Reason for delay - Surgery could not be scheduled within target due to no capacity.
LGI	Internal 31D [redacted]	• Surgery completed Day 43 (31D Breach) Reason for delay - surgery would have been performed on target but due to ED pressures surgery was cancelled and was unable to be scheduled on target.
Urology	Internal [redacted]	• Treatment completed Day 76 - Hormones - Reason for delay - 26 day wait for TRUSB. Pathway - 1st OPD D13, MRI D26, MRI reported D34, TRUSB D63, MDM D72, review D76.
Urology	Internal [redacted]	• Treatment completed Day 100 - Hormones. Reason for delay - 18 day wait for MRI scan, 30 day wait for TRUSB, 9 day wait for MDM, 11 day wait for review with Consultant. Pathway - 1st OPD D16, CT D18, MRI D41, TRUSB D71, MDM D80, review D95, DTT D91, hormones commenced Day 100.
Gynae	External [redacted]	• ITT Day 28 - Treatment Completed - Day 63 - Radiotherapy. Reason for delay - Radiotherapy could not be scheduled within target, following staging. Pathway - 1st OPD D3, Vulval biopsy Day 20, path reported Day 23, MDM D28, ITD D28, ITT D28.
UGI	External [redacted]	• ITT Day 58 - Treatment completed Day 86 - Chemotherapy. Reason for delay - Complex pathway - OGD, CT, staging laparoscopy and multiple discussions at local and regional MDM. Pathway - 1st OPD D11, OGD D22, path D24, ITD D30, CT D31, staging Lap D38, Regional OGD D46.
UGI	External [redacted]	• ITT - Day 49 - Treatment completed Day 77- Chemotherapy. Reason for delay - complex pathway requiring OGD, CT, PET, USS Guided BX & several OG MDM discussions. Pathway - Straight to scope D9 (OGD), path reported Day 16, CT D20, Regional OG MDM D23, PET D24, MDM D30, USS Guided BX D37, path reported Day 41, Regional OG MDM D44.
Urology	External [redacted]	• ITT - Day 75. Treatment completed on D90 - Hormone Therapy. Delays in Pathway - 12 day delay for MRI, 12 day delay for Bone scan, 28 day delay for TRUSB, 14 day delay for Bone scan. Pathway - 1st OPD, MRI D24, Bone Scan D24, TRUSB D40, MDM D48, Consultant

		Oncology appointment D90, Treatment D90.
Urology	External [Personal Information redacted by the]	• **ITT Day 100 - Treatment completed Day 155 - Active Monitoring. Reason for delay - 1st OPD D28, 26 Day wait on TRUSB being performed, 5 day wait for review with Consultant.** Pathway - 1st OPD D28, MRI D37, MRI reported D44, MDM D49, TRUSB D75, MDM D84, review D89, MDM D100.
Urology	External [Personal Information redacted by the]	• **ITT D71 - Treatment completed Day 100 - Hormone therapy. Reason for delay - 1st OPD D20, 17 Day wait for approval of MRI scan, 16 day wait for TRUSB to be arranged following MRI.** Pathway - 1st OPD D20, MRI D37, TRUSB D53, path reported D62, MDM D63, Regional MDM D70
Urology	External [Personal Informati on]	• **ITT Day 86 - Treatment completed Day 176 - Radiotherapy. Delays in pathway - 1st OPD D32, 18 day delay with MRI being reported, 6 day wait on review with Consultant following MDM.** Pathway - 1st OPD D32, MRI D45, MRI reported D68, TRUSB D70, path reported D71, MDM D79, review with Consultant D85.
Lung	External [Person al Informa]	• **ITT Day 62 - Treatment completed Day 103 - Active monitoring. Reason for delay - Complex case, requiring multiple diagnostic investigations & MDM discussions - 1st OPD D24 & 19 day wait for PET Scan.** Pathway - 1st OPD D24, PET D44, MDM D44, EUS D53, path reported D55, biopsy D58, MDM D60
LGI	External [Personal Informatio n]	• **ITT Day 61- Treatment completed Day 88 - Radiotherapy. Reason for delay - 1st OPD D26, deferral from MDM as per Mr Hewitt (loss of 7 days), and the lost days over the Christmas period.** Pathway - 1st OPD D26, colonoscopy D31, MRI D36, CT D40, pathology reported D48, MDM 49.
Gynae	External [Person al Informa]	• **ITT Day 47 - Treatment completed Day 75 - Surgery. Reason for delay - 1st OPD D18 & 16 Day wait for CT scan.** Pathway - 1st OPD D18, endometrial biopsy D18, path reported D24, MDM D25, MRI D41, CT D42, MDM D46, ITD D46.

Risk Areas for March/April 2018

Internal

- Breast screening and assessment, routine symptomatic breast service
- Breast deferrals at MDM due to a change in Radiologist's schedule so MRI's are unable to be viewed prior to MDM, so most will be waiting 7-9 days before being discussed at MDM with staging results.
- Late updating of routine/urgent outpatient referrals within 48 hours
- Outpatient Hysteroscopies – Then having to proceed to inpatient Hysteroscopy – lengthening pathway
- Capacity for 1st RF appointment for Urology, Lung, General Surgery & Ultrasound Guided Biopsy procedures
- Barium Swallow/Meal
- Reporting of diagnostics (CT 's & MRI scanning)
- Capacity issues with CT Colonography's – There has been a request for 4 additional slots per weeks.
- Urology Pathway
- Radiology/Pathology cover @ MDM's due to annual leave and a deputy not being able to attend. The cases are still being listed for discussion with reports. Cases only being deferred and escalated if they are unable to be discussed.
- Urology – TURBT's from 01.01.18 are to be treated as a diagnostic procedure and not first definitive treatment for muscle invasive bladder cancers.
- Oncology Cover – Regional agreement awaited – to be signed off at CRG. There currently is a locum Oncologist on-board and this service will continue to be provided locally.

External

- Lung and Upper GI patients are at risk due to PET capacity – PET waiting times is around 3 weeks.
- Brachytherapy
- Plastics
- Thoracic Surgery
- Robotic Prostatectomy
